The monocyte-depleted peripheral blood mononuclear cells were separated into B, CD_4^+ and CD_8^+ subpopulations by a Panning technique with McAb CD_4 and CD_8. The purity of the B, CD_4^+ and CD_8^+ subpopulations was 82.7%, 90.4% and 90.8% respectively, which was estimated by an indirect immunofluorescence technique. More than 92% of the three subpopulations were viable according to the trypan blue exclusion test. The radiosensitivities of ConA-induced CD_4^+ and CD_8^+ cells were assessed by ^{3}H-TdR incorporation. Experiment demonstrated that a part of ConA-induced CD_4^+ and CD_8^+ cells was radiosensitive but the rest of them was radioresistant. There was no significant difference between the sensitive part both in the ConA-induced CD_4^+ and CD_8^+ cells while there was great significant difference between the resistant one in the both cell lines. The modulate functions of ConA-induced CD_4^+ and CD_8^+ cells and the effect of 10 Gy ^{60}Co γ-rays on them were investigated by the technique of ^{3}H-TdR incorporation. It was demonstrated that the transformation of LPS-induced B lymphocytes was suppressed by the ConA-induced CD_4^+ and CD_8^+ cells. After irradiation, the suppressor activity of ConA-induced CD_4^+ and CD_8^+ cells didn't decrease. The suppressor activity of ConA-induced CD_8^+ cells were enhanced by the ConA-induced CD_4^+ cells significantly, and the suppressor activity of ConA-induced CD_4^+ cells was also enhanced by the ConA-induced CD_8^+ cells. After irradiation, the enhancement effects of the ConA-induced CD_4^+ and CD_8^+ cells disappeared.

31875 (CNIC–00490) **Study on the ^{90}Sr absorption by agricultural plants grown in soil from Daya Bay and Qinshan area.** Zhao Wenhu (Chinese Academy of Agricultural Sciences, Beijing, BJ (China). Inst. for Application of Atomic Energy); Hou Lanxin; Xu Shiming. China Nuclear Information Centre, Beijing, BJ (China). Mar 1991. 14p. (In Chinese). (CSNAS–0043.). Order Number DE93601640. Source: OSTI; NTIS (US Sales Only); INIS.

The soil around the Qinshan and Daya Bay nuclear power plants were used in this study. The ^{90}Sr was spread into the soil by irrigation. The amount of ^{90}Sr spread were 0.037, 0.37, 3.7 and 370 Bq per gram soil respectively. After being treated, the soil were employed to grow rice, wheat, rape, bean, asparagus lettuce, tomato and peas. The harvested plants were divided into seeds, stems and leaves, husks and roots to measure their radioactivity separately. The results showed that the amount of ^{90}Sr absorbed by the plants was directly proportional to the ^{90}Sr content in the soil. The absorbed ^{90}Sr was mainly distributed in the stems and leaves. The seeds absorbed the least amount of ^{90}Sr compared with the other portions. The old leaves absorbed greater ^{90}Sr than the buds. The accumulated ^{90}Sr per unit dry weight of all plants grown in the soil from Daya Bay area was greater than in the soil from Qinshan area. More than 80% of total ^{90}Sr was distributed in the top layer from 0 to 4 cm. The concentration factors of various plants were also given.

31876 (CNIC–00497) **Study on the retention of enriched UO_2F_2 in the mouse and its radiogenotoxicological effects.** Hu Qiyue (Suzhou Medical Coll., JS (China)); Zhu Shoupeng. China Nuclear Information Centre, Beijing, BJ (China). Jun 1991. 18p. (In Chinese). (SMC–0059.). Order Number DE93601641. Source: OSTI; NTIS (US Sales Only); INIS.

The study on toxicological effects of enriched UO_2F_2 was undertaken in purebred BALB/c male mice to examine: (a) the retention in body; (b) the testicular clearance; (c) the effect of sperm abnormality; (d) the effect of chromosomal aberrations in spermatogonia and primary spermatocytes; and (e) the effect of DNA damage in germ cells in various spermiogenic stages. Results show that enriched UO_2F_2 mainly deposited in the kidneys, then the skeleton and liver. The amount of enriched UO_2F_2 depositing in other tissues was small. Enriched UO_2F_2 was similar to the natural uranium in transference and retention in the body. The testis had efficient clearance of enriched UO_2F_2. Enriched UO_2F_2 could result in sperm abnormality. Even with the same treating does but at different treating time the rates of sperm abnormality were different. Enriched UO_2F_2 could result in chromosomal aberrations in spermatogonia and primary spermatocytes. The important type of aberrations in spermatogonia was break. For primary spermatocytes the most significant aberration was multivalents. Enriched UO_2F_2 could also result in DNA breakage in germ cells. The sensitivity of mouse germ cells at various stages to enriched UO_2F_2 was different. There was a linear relationship between the amount of sperm DNA eluted and enriched UO_2F_2 dose.

31877 (CNIC–00499) **Mutagenic effects induced by accumulating rare earths nuclides with different ionic radius in fission fragments.** Zhu Shoupeng (Suzhou Medical Coll., JS (China)); Wang Liuyi; Cao Genfa; Sun Baofu. China Nuclear Information Centre, Beijing, BJ (China). May 1991. 8p. (In Chinese). (SMC–0060.). Order Number DE93601642. Source: OSTI; NTIS (US Sales Only); INIS.

The purpose of the present study was to ascertain the correlation between the different ionic radius of rare earths nuclides such as ^{170}Tm, ^{152}Eu, ^{147}Pm and its accumulation peculiarity as well as induction of mutagenic effect on bone marrow cells. The study showed that the accumulation peculiarity of rare earths nuclides will vary with the ionic radius. The results indicated that large ionic radius of ^{147}Pm was selectively localized in liver in early stage, while small ionic radius of ^{170}Tm and ^{152}Eu were deposited in bone predominantly. There was a positive relationship between the incidence of chromosome aberration rates and the absorption dose in skeleton by ^{170}Tm, ^{152}Eu, or ^{147}Pm. Studies indicated that the chromosome aberration rates were elevated when the absorption dose in skeleton was increased. Among the type of chromosome aberrations induced by rare earths nuclides with different ionic radius, chromatid breakage was predominant, accompanied with a few chromosome breakage and translocation. At the same time mitosis index of metaphase cells was depressed. Internal contamination of ^{170}Tm, ^{152}Eu, or ^{147}Pm can be induced by some aberrations in one cell. This phenomenon might be due in part to nonuniform irradiation of bone marrow cell with local deposition of these rare earths nuclides with different ionic radius.

31878 (CONF-910529–, pp. 1-7) **Risk assessment from heterogeneous energy deposition in tissue, the problem of effects from low doses of ionizing radiation.** Feinendegen, L.E. (Research Center Juelich GmbH (Germany)); Booz, J. Oak Ridge Associated Universities, Inc., TN (United States). May 1992. From 5. international radiopharmaceutical dosimetry symposium; Oak Ridge, TN (United States); 7-10 May 1991. In *Fifth international radiopharmaceutical dosimetry symposium.* 625p. Order Number DE92013066. Source: OSTI; NTIS; INIS.

Low doses of ionizing radiation from external or internal sources cause heterogeneous distribution of energy deposition events in the exposed biological system. With the cell being the individual element of the tissue system, the fraction of cells hit, the dose received by the hit, and the biological response of the cell to the dose received eventually determine the effect in tissue. The hit cell may experience detriment, such as change in its DNA leading to a malignant transformation, or it may derive benefit in terms of an adaptive response such as a temporary improvement of DNA repair or temporary prevention of effects from intracellular radicals through enhanced radical detoxification. These responses are protective also to toxic substances that are generated during normal metabolism. Within a multicellular system the probability of detriment must be weighed against the probability of benefit through adaptive responses with protection against various toxic agents including those produced by normal metabolism. Because irradiation can principally induce both, detriment and adaptive responses, one type of affected cells may not be simply summed up at the expense of cells with other types of effects, in assessing risk to tissue. An inventory of various types of effects in the blood-forming system of mammals, even with large ranges of uncertainty, uncovers the possibility of benefit to the system from exposure to low doses of low-LET radiation. This experimental approach may complement epidemiological data on individuals exposed to low doses of ionizing radiation and may lead to a more rational appraisal of risk.

31879 (CONF-910529–, pp. 28-40) **Health and dosimetry considerations in the ICRP 1990 formulation of effective dose.** Eckerman, K.F. (Oak Ridge National Lab., TN (United States)). American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., Atlanta, GA (United States). May 1992. DOE Contract AC05-84OR21400. From 5. international radiopharmaceutical dosimetry symposium; Oak Ridge, TN (United States); 7-10 May 1991. In *Fifth international radiopharmaceutical dosimetry symposium.* 625p. Order Number DE92013066. Source: OSTI; NTIS; INIS.

The new recommendations of the International Commission on Radiological Protection contained in Publication 60 supersede those of Publication 26 issued in 1977. The recommendations are intended to assist national authorities in formulation of radiation protection guidance. Sufficient explanatory information is included to clearly note that radiation protection issues cannot be resolved on the basis of scientific considerations alone, but also require value judgments regarding the relative importance of different kinds of risks and the balance between risk and benefit. Ionizing radiation causes both deterministic and stochastic effects in irradiated tissue. It is the aim of radiation protection to avoid deterministic effects by setting dose limits below their thresholds and to control exposure to limit the frequency of stochastic effects, believed to occur (albeit with low frequency) even at the lowest doses. Cancer induction and hereditary effects are the stochastic effects of concern. The Commission has relied largely on studies of the Japanese A-bomb survivors in estimating the probability of a fatal cancer and concluded that the most probable dose-response relationship is linear-quadratic. The linear coefficient at low dose or low dose-rate is obtained from the high dose, high dose-rate estimates of risk by dividing by an effectiveness factor of two. Using the data from the A-bomb survivors, the Commission estimated the distribution the fatal cancer risk among the organs of the body and the length of life lost for cancer in each organ. The Commission further developed the concept of health detriment to represent the combination of the probability of occurrence of a harmful health effect with a judgment of the severity of that effect.

31880 (CONF-910529–, pp. 41-51) **Effective dose to the patient from radiopharmaceuticals calculated with the new ICRP tissue weighting factors.** Johansson, L. (Umeaa Univ. Hospital (Sweden)); Mattsson, S.; Nosslin, B.; Leide, S. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., Atlanta, GA (United States). May 1992. From 5. international radiopharmaceutical dosimetry symposium; Oak Ridge, TN (United States); 7-10 May 1991. In *Fifth international radiopharmaceutical dosimetry symposium.* 625p. Order Number DE92013066. Source: OSTI; NTIS; INIS.

In 1988 the ICRP Publication 53, Radiation Dose to Patients from Radiopharmaceuticals, was published. In this report effective dose equivalents to the patient from different radiopharmaceuticals were given for various ages of the patient. These data were based on the tissue weighting factors published in the recommendations from the ICRP 26. The ICRP has recently revised these weighting factors, and published new recommendations in its report ICRP 60. Based on the biokinetics data given in ICRP 53 the authors have calculated the effective dose to the adult nuclear medicine patient for all radiopharmaceuticals included in this report. Compared with the ICRP 53 data a slight decrease in the value of the effective dose can be observed for most of the radiopharmaceuticals.

31881 (CONF-910529–, pp. 52-56) **The interpretation of animal data in the calculation of doses from new radiolabeled compounds.** Naylor, G.P.L. (National Radiological Protection Board, Oxon (United Kingdom)); Ellender, M.; Harrison, J.D. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., Atlanta, GA (United States). May 1992. From 5. international radiopharmaceutical dosimetry symposium; Oak Ridge, TN (United States); 7-10 May 1991. In *Fifth international radiopharmaceutical dosimetry symposium.* 625p. Order Number DE92013066. Source: OSTI; NTIS; INIS.

At NRPB, dose calculations are performed for pharmaceutical companies wishing to obtain approval for human volunteer experiments. Animal data from one or more species are used to estimate the radiation doses to humans that would result from the administration of novel radiolabeled compounds. The calculations themselves are straightforward, but the animal data can be interpreted in different ways, leading to variations in the calculated dose. Doses to the gut compartments usually dominate the committed effective dose equivalent, but retention in other tissues may be important for some compounds. Long-term retention components in tissues can affect doses considerably, and the binding of many radiopharmaceuticals to melanin means that doses to the eye are particularly important. The effect of these considerations on calculating doses are considered, as well as the effect of changes in risk estimates and tissue weighting factors.

31882 (CONF-910529–, pp. 57-65) **A new approach to radiopharmaceutical dose assessment.** Desrosiers, M.F. (National Inst. of Standards and Technology, Gaithersburg, MD (United States)); Coursey, B.M. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., Atlanta, GA (United States). May 1992. From 5. international radiopharmaceutical dosimetry symposium; Oak Ridge, TN (United States); 7-10 May 1991. In *Fifth international radiopharmaceutical dosimetry symposium.* 625p. Order Number DE92013066. Source: OSTI; NTIS; INIS.

Dosimetry for bone-seeking radiopharmaceuticals relies on an accurate measurement of the activity administered, a model for uptake of the pharmaceutical, and calculations of the dose to the target organ. The authors report here a new approach to experimental assessment of the radiation dose to bone using electron paramagnetic resonance (EPR) spectrometry. Ionizing radiations interact with mineralized bone tissue (hydroxyapatite) to produce dose-dependent concentrations of long-lived paramagnetic centers. They have successfully applied the EPR technique to bone tissues of an animal treated with a radiopharmaceutical to demonstrate its sensitivity towards radiation-induced centers in the mineralized tissue. Although the EPR bone dosimetry method is invasive, it does offer the first experimental technique for measuring and mapping the tissue response to the administered radioactivity.

31883 (CONF-910529–, pp. 66-76) **External beam and radioimmunotherapy dosimetry comparison of colorectal**

xenografts. Wessels, B.W. (George Washington Univ., Washington, DC (United States)); Yorke, E.D.; Neacy, W.P.; Sands, H. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., Atlanta, GA (United States). May 1992. From 5. international radiopharmaceutical dosimetry symposium; Oak Ridge, TN (United States); 7-10 May 1991. In *Fifth international radiopharmaceutical dosimetry symposium.* 625p. Order Number DE92013066. Source: OSTI; NTIS; INIS.

It is of little surprise to most experts in radiation dosimetry that the largest uncertainties associated with calculation of absorbed doses to tumor normal tissues after IV administration of radiolabeled antibodies, does not lie in the calculation methods but rather in the acquisition of time-dependent activity data. In comparison to external beam radiation dosimetry, the problems of temporal and spatial macroscopic and microscopic heterogeneities continue to confound one's best efforts. In fact in some clinical settings, only a radiobiological end-point such as hematopoietic depression is used exclusively with no reference made to absorbed dose quantitation at all. Hence in these cases, it is most practical to simply relate administered activity directly with radiobiological response. To help provide a correlation between activity, absorbed dose and radiobiological response, animal radioimmunotherapy (RIT) experiments were performed here in which the above parameters were measured and compared with multiple dose levels of external beam irradiation. Using the LS174T colorectal xenograft model in nude mice, administered activities of up to 18.5 MBq of I-131 labeled B72.3 delivered an average measured absorbed dose to tumor of 3.2 ± 0.5 cGy/3.7×10^4 Bq. This absorbed dose (1,440 cGy from a nominal 17 MBq administered activity) produced tumor growth delay values that were comparable to a dose of 2,250 cGy on average delivered by single fraction external beam radiation therapy. An average dose enhancement ratio was calculated at 1.6 for RIT as compared with external beam therapy. This enhancement ratio ranged from 1.0-2.4 for several experimental repetitions under a variety of initial conditions.

31884 (CONF-910529–, pp. 152-165) **National standards for diagnostic and therapeutic nuclides.** Coursey, B.M. (National Inst. of Standards and Technology, Gaithersburg, MD (United States)); Calhoun, J.M.; Cessna, J.; Hoppes, D.D.; Schima, F.J.; Unterweger, M.P.; Golas, D.B.; Gray, D.H. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., Atlanta, GA (United States). May 1992. From 5. international radiopharmaceutical dosimetry symposium; Oak Ridge, TN (United States); 7-10 May 1991. In *Fifth international radiopharmaceutical dosimetry symposium.* 625p. Order Number DE92013066. Source: OSTI; NTIS; INIS.

National standards for radionuclides used in nuclear medicine are based on activity measurements at the NIST (formerly National Bureau of Standards). Over the past 15 years standards for the diagnostic radionuclides have been developed, employing mainly $4\pi(e,x)-\gamma$ coincidence or anti-coincidence counting, as most of the diagnostic radionuclides decay by isomeric transition (e.g. ^{99m}Tc) or electron capture (e.g. ^{111}In). Recent interest in therapeutic uses of radionuclides has focused on high-energy beta-particle emitters of 1-3 day half-life. A rapid method for accurately standardizing these nuclides has been developed. The CIEMAT/NIST liquid-scintillation efficiency tracing method has been used for ^{90}Y, ^{153}Sm, ^{166}Ho, ^{186}Re and ^{188}Re. Concurrently with the activity measurements, the authors have measured half lives, probabilities per decay for key x- and gamma-rays, and radionuclidic impurities.

31885 (CONF-910529–, pp. 167-178) **Distribution of ionic indium and gallium in pregnant and nonpregnant animals.** Lathrop, K.A. (Univ. of Chicago, IL (United States)); Tsui, B.M.; Harper, P.V. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., Atlanta, GA (United States). May 1992. From 5. international radiopharmaceutical dosimetry symposium; Oak Ridge, TN (United States); 7-10 May 1991. In *Fifth international radiopharmaceutical dosimetry symposium.* 625p. Order Number DE92013066. Source: OSTI; NTIS; INIS.

This report provides data for total body distributions of intravenously administered, chemically similar, radionuclides of ionic indium and gallium in pregnant and nonpregnant mice; placental transfer to fetus versus time in mice, and uptake of activity in the feto-placental unit of the guinea pig, monkey, and human. In pregnant mice, which were studied in detail, there is marked sequestration of both indium and gallium in the feto-placental unit, especially toward the end of pregnancy. Renal hypertrophy associated with pregnancy further distorts the biodistribution. These findings were consistent with less detailed observations in other species including the human. Such observations indicate that biodistribution data for nonpregnant subjects are not reliable when calculating absorbed doses for pregnancy; and that distribution data for one element of a chemical group cannot be substituted for another element of that group.

31886 (CONF-910529–, pp. 179-187) **Radiation absorbed dose to the human fetal thyroid.** Watson, E.E. (Oak Ridge Associated Universities, TN (United States)). American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., Atlanta, GA (United States). May 1992. DOE Contract AC05-76OR00033. From 5. international radiopharmaceutical dosimetry symposium; Oak Ridge, TN (United States); 7-10 May 1991. In *Fifth international radiopharmaceutical dosimetry symposium.* 625p. Order Number DE92013066. Source: OSTI; NTIS; INIS.

The embryo/fetus is recognized to be particularly susceptible to damage from exposure to radiation. Many advisory groups have studied available information concerning radiation doses and radiation effects with the goal of reducing the risk to the embryo/fetus. Of particular interest are radioactive isotopes of iodine. Radioiodine taken into the body of a pregnant woman presents a possible hazard for the embryo/fetus. The fetal thyroid begins to concentrate iodine at about 13 weeks after conception and continues to do so throughout gestation. At term, the organic iodine concentration in the fetal blood is about 75% of that in the mother's blood. This paper presents a review the models that have been proposed for the calculation of the dose to the fetal thyroid from radioisotopes of iodine taken into the body of the pregnant woman as sodium iodide. A somewhat different model has been proposed, and estimates of the radiation dose to the fetal thyroid calculated from this model are given for each month of pregnancy from ^{123}I , ^{124}I , ^{125}I , and ^{131}I.

31887 (CONF-910529–, pp. 188-201) **Dosimetry of intrathecally administered radiopharmaceuticals.** Johansson, L. (Umeaa University Hospital (Sweden)); Nosslin, B. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., Atlanta, GA (United States). May 1992. From 5. international radiopharmaceutical dosimetry symposium; Oak Ridge, TN (United States); 7-10 May 1991. In *Fifth international radiopharmaceutical dosimetry symposium.* 625p. Order Number DE92013066. Source: OSTI; NTIS; INIS.

A model for calculation of absorbed doses from radiopharmaceuticals, such as chelates and proteins intended for intrathecal administrations, is presented. The model has been used for dose calculations in ICRP Publication 53. The model comprises both a biokinetic part, describing the transport of the substance, and the mathematical model of the anatomy of the spinal cord, used for calculation of absorbed fractions to different organs. The biokinetic model is presented in form of a compartment model, describing the net transport of the substance after cisternal or lumbar injection. A Monte Carlo program has been used to calculate specific absorbed fractions for the different 'MIRD-organs' and for the spinal cord, with a source located in different regions of the subarachnoid space.

31888 (CONF-910529–, pp. 202-218) **Prediction of radiation dose to the GI tract from analysis of blood and liver time-activity curves.** Stabin, M.G. (Oak Ridge Associated Universities, TN (United States)). American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., Atlanta, GA (United States). May 1992. DOE Contract AC05-76OR00033. From 5. international radiopharmaceutical dosimetry symposium; Oak Ridge, TN (United States); 7-10 May 1991. In *Fifth international radiopharmaceutical dosimetry symposium.* 625p. Order Number DE92013066. Source: OSTI; NTIS; INIS.

A mathematical method is described which permits prediction of cumulative excretion of radioactivity through the gastrointestinal tract based solely on analysis of blood and liver time-activity curves. This permits estimation of radiation dose to the gastrointestinal tract organs without the need for quantitative imaging of the intestines or sampling of the feces. The method has general application; however, a few typical models are studied to show example solutions. Technetium-99m HMPAO, for which blood and liver data as well as excretion data are known, is also studied using one of the models. Matrix methods for derivation of time dependent solutions for the model compartments are discussed.

31889 (CONF-910529–, pp. 219) **Choosing representative body sizes for reference adults and children.** Cristy, M. (Oak Ridge National Lab., TN (United States)). American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., Atlanta, GA (United States). May 1992. DOE Contract AC05-84OR21400. From 5. international radiopharmaceutical dosimetry symposium; Oak Ridge, TN (United States); 7-10 May 1991. In *Fifth international radiopharmaceutical dosimetry symposium.* 625p. Order Number DE92013066. Source: OSTI; NTIS; INIS.

In 1975 the International Commission on Radiological Protection published a report on Reference Man (ICRP Publication 23), and a task group of the ICRP is now revising that report. Currently 'Reference Man [adult male] is defined as being between 20-30 years of age, weighing 70 kg, is 170 cm in height, is a Caucasian and is a Western European or North American in habitat and custom' (ICRP 23, p. 4). A reference adult female (58 kg, 160 cm) was also defined and data on the fetus and children were given, but with less detail and fewer specific reference values because the focus of the ICRP at that time was on young male radiation workers. The 70-kg Reference Man (earlier called Standard Man) has been used in radiation protection for 40 years, including the dosimetric schema for nuclear medicine, and this 70-kg reference has been used since at least the 1920's in physiological models. As is well known, humans in most parts of the world have increased in size (height and weight) since this standard was first adopted. Taking modern European populations as a reference and expanding the age range to 20-50 years, the author now suggests 176 cm height and 73-75 kg weight for adult males and 163 cm and about 60 kg for adult females would be more appropriate. The change in height is particularly important because many anatomical and physiological parameters - e.g., lean body mass, skeletal weight, total body water, blood volume, respiratory volumes - are correlated more closely with height than with weight. The difference in lean body mass between Asian and Caucasian persons, for example, is largely or wholly due to the difference in body height. Many equations for mean body water and other whole-body measures use body height as the only or the most important parameter, and so it is important that reference body height be chosen well.

31890 (CONF-910529–, pp. 229-242) **A new mathematical model of gastrointestinal transit incorporating age- and gender-dependent physiological parameters.** Stubbs, J.B. (Oak Ridge Associated Universities, TN (United States)). American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., Atlanta, GA (United States). May 1992. DOE Contract AC05-76OR00033. From 5. international radiopharmaceutical dosimetry symposium; Oak Ridge, TN (United States); 7-10 May 1991. In *Fifth international radiopharmaceutical dosimetry symposium.* 625p. Order Number DE92013066. Source: OSTI; NTIS; INIS.

As part of the revision by the International Commission on Radiological Protection (ICRP) of its report on Reference Man, an extensive review of the literature regarding anatomy and morphology of the gastrointestinal (GI) tract has been completed. Data on age- and gender-dependent GI physiology and motility may be included in the proposed ICRP report. A new mathematical model describing the transit of substances through the GI tract as well as the absorption and secretion of material in the GI tract has been developed. This mathematical description of GI tract kinetics utilizes more physiologically accurate transit processes than the mathematically simple, but nonphysiological, GI tract model that was used in ICRP Report 30. The proposed model uses a combination of zero- and first-order kinetics to describe motility. Some of the physiological parameters that the new model accounts for include sex, age, pathophysiological condition and meal phase (solid versus liquid). A computer algorithm, written in BASIC, based on this new model has been derived and results are compared to those of the ICRP-30 model.

31891 (CONF-910529–, pp. 243-255) **Absorbed dose calculations to blood and blood vessels for internally deposited radionuclides.** Akabani, G. (Pacific Northwest Laboratories, Richland, WA (United States)); Poston, J.W. Sr. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., Atlanta, GA (United States). May 1992. DOE Contract FG05-88ER60707. From 5. international radiopharmaceutical dosimetry symposium; Oak Ridge, TN (United States); 7-10 May 1991. In *Fifth international radiopharmaceutical dosimetry symposium.* 625p. Order Number DE92013066. Source: OSTI; NTIS; INIS.

At present, absorbed dose calculations for radionuclides in the human circulatory system use relatively simple models and are restricted in their applications. To determine absorbed doses to the blood and to the surface of the blood vessel wall, Monte Carlo calculations were performed using the code Electron Gamma Shower (EGS4). Absorbed doses were calculated for the blood and the blood vessel wall (lumen) for different blood vessel sizes. The radionuclides chosen for this study were those commonly used in nuclear medicine. No diffusion of the radionuclide into the blood vessel was or cross fire between blood vessels was assumed. Results are useful in assessing the doses to blood and blood vessel walls for different nuclear medicine procedures.

31892 (CONF-910529–, pp. 256-273) **Biodistribution parameters and radiation absorbed dose estimates for radiolabeled human low density lipoprotein.** Hay, R.V. (Univ. of Chicago, IL (United States)); Ryan, J.W.; Williams, K.A.; Atcher, R.W.; Brechbiel, M.W.; Gansow, O.A.; Fleming, R.M.; Stark, V.J.; Lathrop, K.A.; Harper, P.V. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., Atlanta, GA (United States). May 1992. DOE Contract FG02-87ER60614 ;FG02-88ER60725. From 5. international radiopharmaceutical dosimetry symposium; Oak Ridge, TN (United States); 7-10 May 1991. In *Fifth international radiopharmaceutical dosimetry symposium.* 625p. Order Number DE92013066. Source: OSTI; NTIS; INIS.

The authors propose a model to generate radiation absorbed dose estimates for radiolabeled low density lipoprotein (LDL), based upon eight studies of LDL biodistribution in three adult human subjects. Autologous plasma LDL was labeled with Tc-99m, I-123, or In-111 and injected intravenously. Biodistribution of each LDL derivative was monitored by quantitative analysis of scintigrams and direct counting of excreta and of serial blood samples. Assuming that transhepatic flux accounts for the majority of LDL clearance from the bloodstream, they obtained values of cumulated activity (Ã) and of mean dose per unit administered activity (D) for each study. In each case highest D values were calculated for liver, with mean doses of 5 rads estimated at injected activities of 27 mCi, 9 mCi, and 0.9 mCi for Tc-99m-LDL, I-123-LDL, and In-111-LDL, respectively.

31893 (CONF-910529–, pp. 274-283) **Reevaluation of S-values considering electron transport.** Akabani, G. (Pacific Northwest Laboratories, Richland, WA (United States)); Poston, J.W. Sr. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., Atlanta, GA (United States). May 1992. DOE Contract FG05-88ER60707. From 5. international radiopharmaceutical dosimetry symposium; Oak Ridge, TN (United States); 7-10 May 1991. In *Fifth international radiopharmaceutical dosimetry symposium.* 625p. Electron-specific absorbed fractions were calculated for selected organs and regions of the mathematical reference man. The organs or regions considered were those with high surface-to-volume ratio, organs with walls, and organs that have subdivisions. The calculated specific absorbed fractions for electrons are a complement to be used with the Medical Internal Radiation Dose (MIRD) methodology. New estimates of S-values for 80 radionuclides were calculated using the new electron-specific absorbed fractions for 21 combinations of source-target regions and were compared with those already published in MIRD Pamphlet No. 11. Small differences in S-values were found by using electron specific absorbed fractions when the source organ is the target organ. However, large differences in S-values were found for those organs with walls.

31894 (CONF-910529–, pp. 284-289) **Enhancement of radiation dose to the bone marrow from backscattering of electron sources.** Kwok, C.S. (Ontario Cancer Treatment and Research

Foundation, Hamilton (Canada)); Hadjiyannakis, A.; Yu, S.K. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., Atlanta, GA (United States). May 1992. From 5. international radiopharmaceutical dosimetry symposium; Oak Ridge, TN (United States); 7-10 May 1991. In *Fifth international radiopharmaceutical dosimetry symposium.* 625p. Order Number DE92013066. Source: OSTI; NTIS; INIS.

The absorbed fractions of continuous sources of monoenergetic electrons in marrow cavities of human bone have been previously evaluated. The difference in the scattering power of electrons in cortical bone (CB) and the red marrow (RM) was neglected. In the present work the Integrated Tiger series of radiation transport Monte Carlo codes was used to investigate the effect of the size of the marrow cavity, assumed to be spherical, on the backscatter dose to the RM. Three hundred and 500-μm radius spheres imbedded with isotropic distributions of ^{90}Y or ^{131}I were considered. The average dose increases for ^{131}I and ^{90}Y in the 500 μm radius spherical model of the marrow cavities are 5 and 4%, respectively. The average dose increases for the same nuclides in the 300-,am radius spheres are 6 and 4%, respectively.

31895 (CONF-910529–, pp. 290-296) **A model for electron and beta energy deposition within trabecular bone.** Shearer, T.W. (Texas A and M Univ., College Station (United States)); Bolch, W.E.; Poston, J.W. Sr.; Akabani, G. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., Atlanta, GA (United States). May 1992. DOE Contract FG05-88ER60707. From 5. international radiopharmaceutical dosimetry symposium; Oak Ridge, TN (United States); 7-10 May 1991. In *Fifth international radiopharmaceutical dosimetry symposium.* 625p. Order Number DE92013066. Source: OSTI; NTIS; INIS.

In many calculations of absorbed dose from charged particles, the irradiated media is considered to be homogeneous and boundary effects are ignored. These assumptions are acceptable in situations where the target volume is large compared to the range of the charged particles and the media is homogeneous in composition over such distances. These simplifying assumptions are not always true, and for complex structures, such as trabecular bone, more sophisticated dosimetry methods are needed. In this work, a model for electron energy deposition in bone is developed utilizing the electron transport code EGS4. For each electron history, random samplings are made of the chord length distributions through marrow cavities similar to the research of Chen and Poston. Specific parameters of the distribution are adjusted to represent both the variation of cavity size throughout the skeletal system, as well as the variation of cavity size within a particular cross section of bone. Calculations are presented in terms of absorbed fractions of energy within red bone marrow, trabeculae, and the endosteal layer for various internal distributions of a selected number of radionuclides.

31896 (CONF-910529–, pp. 297-308) **Calculations of scaled dose kernels for electrons in tissue.** Liu, J.C. (Texas A and M Univ., College Station (United States)); Akabani, G.; Bolch, W.E.; Poston, J.W. Sr. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., Atlanta, GA (United States). May 1992. DOE Contract FG05-88ER60707. From 5. international radiopharmaceutical dosimetry symposium; Oak Ridge, TN (United States); 7-10 May 1991. In *Fifth international radiopharmaceutical dosimetry symposium.* 625p. Order Number DE92013066. Source: OSTI; NTIS; INIS.

A calculational approach to generating scaled dose kernels for electrons is described. Each scaled dose kernel is expressed in the form of a data table consisting of 100 values representing point kernels within 100 equally divided spherical shells of a sphere of radius 1.2 times the Continuous Slowing Down Approximation (CSDA) range. The calculation begins with a determination of energy deposition for monoenergetic electrons in muscle. The data are then used to provide scaled dose kernels which are applicable in absorbed dose calculations for internally deposited radionuclides. The absorbed dose is obtained by calculating source-target distances and selecting appropriate values from the kernel tables. This algorithm for dose kernel calculations can be extended to provide composite scaled dose kernels for any β-emitting radionuclide precisely and quickly without the need for time-consuming Monte Carlo calculations.

31897 (CONF-910529–, pp. 309-333) **Point-pair distributions for internal dosimetry.** Faw, R.E. (Kansas State Univ., Manhattan (United States)); Shultis, J.K. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., Atlanta, GA (United States). May 1992. From 5. international radiopharmaceutical dosimetry symposium; Oak Ridge, TN (United States); 7-10 May 1991. In *Fifth international radiopharmaceutical dosimetry symposium.* 625p. Order Number DE92013066. Source: OSTI; NTIS; INIS.

The purpose of this work is to show how point-pair distance distributions can be combined with point-kernel techniques to obtain a simple and computationally efficient method for many photon and electron internal dosimetry problems. The point-pair distribution p(r,T←S) for a source organ or tissue S and a target organ or tissue T is the distribution function for distances r separating randomly selected point pairs in regions T and S. The point-pair distribution is closely related to the geometry factor g(r,T←S), the fraction of all rays of length r originating in region S that end in region T. Methods are developed for using point-pair distributions in conjunction with point kernels in the evaluation of absorbed doses when source and target organs or regions are present in homogeneous attenuating media and radiation emitters are uniformly distributed in the source region. Point-pair distributions are illustrated for a number of geometries. For simple geometries, these distributions are computed analytically. For more complex shapes, Monte Carlo methods are used. Example distributions are illustrated for use in gamma-ray dosimetry involving organs such as the thyroid and bladder wall and for use in electron dosimetry involving source and target regions at the cellular level. Absorbed fraction calculations are illustrated for monoenergetic photon and electron sources. For photons, point kernels are based on ENDF/B-VI interaction coefficients and geometric-progression buildup factors. For electrons, point kernels are based on Berger's scaled point source distribution function.

31898 (CONF-910529–, pp. 334-351) **SPECTDOSE: A computerized radiation dosimetry methodology for use with radiolabeled antibodies using quantitative SPECT.** Wilson, L.A. (City of Hope National Medical Center, Duarte, CA (United States)); Properzio, W.S.; Bolch, W.E. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., Atlanta, GA (United States). May 1992. From 5. international radiopharmaceutical dosimetry symposium; Oak Ridge, TN (United States); 7-10 May 1991. In *Fifth international radiopharmaceutical dosimetry symposium.* 625p. Order Number DE92013066. Source: OSTI; NTIS; INIS.

A methodology incorporated into a computer program called SPECTDOSE has been developed which will allow for the calculation of absorbed doses in tissues with a nonuniform or uniform radioactivity distribution. This methodology uses quantitative Single-Photon Emission Computed Tomography (SPECT) to determine the activity concentration and volume of the source tissues and a Monte Carlo method to determine the amount of energy deposited in the target and source organs. Contrary to the standard MIRD approach, SPECTDOSE uses the actual organ and tumor volumes and activity concentrations from the SPECT image.

31899 (CONF-910529–, pp. 366-370) **Special aspects of positron dosimetry.** Harper, P.V. (Univ. of Chicago, IL (United States)); Lathrop, K.A. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., Atlanta, GA (United States). May 1992. From 5. international radiopharmaceutical dosimetry symposium; Oak Ridge, TN (United States); 7-10 May 1991. In *Fifth international radiopharmaceutical dosimetry symposium.* 625p. Order Number DE92013066. Source: OSTI; NTIS; INIS.

While positron dosimetry does not differ fundamentally from that of other emitters, the fact that all positron decays result in the majority of the emitted energy being deposited within a very few millimeters of its point of origin requires special consideration. Since this energy is deposited within the body the radiation absorbed dose per microcurie hour is, in general, much greater than that from the usual agents used in nuclear medicine which are deliberately chosen to have relatively little particle radiation. Consequently, the use of positron emitters is more or less limited to materials with short effective half lives. Fortunately there are a number of such nuclides, among them ^{82}Br, 75 s; ^{15}O , 2 m; ^{13}N, 10 m; ^{11}C, 20 m; ^{68}Ga, 68 m; ^{75}Br, 97 m; and ^{18}F, 108 m, which can be incorporated into biologic or xenobiotic materials. It turns out that in some cases very substantial quantities (many 10's of mCi), of such agents may be administered without exceeding acceptable radiation absorbed doses when these materials are widely dispersed in the body. Detailed human biodistribution data, accounting for all the administered radioactivity, which are required for such calculations have not in general been available in the literature. In addition, the routes of administration and excretion receive high radiation exposures. For example, with an IV administration the vessel wall may be exposed briefly to an extremely high radionuclide concentration and also, the entire IV dose passes through the lung before being dispersed through the body. Administration by inhalation, as with CO^{15}O, may result in substantial exposure to upper airways, and the interface dosimetry required to estimate such effects goes beyond MIRD methods.

31900 (CONF-910529–, pp. 371-384) **Dynamic PET scanning and compartmental model analysis to determine cellular level radiotracer distribution in vivo.** Smith, G.T. (Univ. of Tennessee, TN (United States)); Hubner, K.F.; Goodman, M.M.; Stubbs, J.B. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., Atlanta, GA (United States). May 1992. From 5. international radiopharmaceutical dosimetry symposium; Oak Ridge, TN (United States); 7-10 May 1991. In *Fifth international radiopharmaceutical dosimetry symposium.* 625p. Order Number DE92013066. Source: OSTI; NTIS; INIS.

Positron emission tomography (PET) has been used to measure tissue radiotracer concentration in vivo. Radiochemical distribution can be determined with compartmental model analysis. A two compartment model describes the kinetics of N-13 ammonia ($^{13}NH_3$) in the myocardium. The model consists of a vascular space, Q_1 and a space for $^{13}NH_3$ bound within the tissue, Q_2. Differential equations for the model can be written: $\dot{X}(t) = AX(t) + BU(t)$, $Y(t)= CX(t)+ DU(t)$ (1) where X(t) is a column vector $[Q_1(t); Q_2(t)]$, U(t) is the arterial input activity measured from the left ventricular blood pool, and Y(t) is the measured tissue activity using PET. Matrices A, B, C, and D are dependent on physiological parameters describing the kinetics of $^{13}NH_3$ in the myocardium. Estimated parameter matrices in Equation 1 have been validated in dog experiments by measuring myocardial perfusion with dynamic PET scanning and intravenous injection of ^{13} NH_3. Tracer concentrations for each compartment can be calculated by direct integration of Equation 1. If the cellular level distribution of each compartment is known, the concentration of tracer within the intracellular and extracellular space can be determined. Applications of this type of modeling include parameter estimation for measurement of physiological processes, organ level dosimetry, and determination of cellular radiotracer distribution.

31901 (CONF-910529–, pp. 385-395) **An approach to cellular level dosimetry using compartmental model analysis and dynamic PET.** Stubbs, J.B. (Oak Ridge Associated Universities, TN (United States)); Stabin, M.G.; Smith, G.T.; Eckerman, K.F.; Turner, J.E. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., Atlanta, GA (United States). May 1992. DOE Contract AC05-76OR00033. From 5. international radiopharmaceutical dosimetry symposium; Oak Ridge, TN (United States); 7-10 May 1991. In *Fifth international radiopharmaceutical dosimetry symposium.* 625p. Order Number DE92013066. Source: OSTI; NTIS; INIS.

The kinetic parameters of a compartmental model, describing the biokinetics of nitrogen-13 labeled ammonia (^{13} NH_3) in human cardiac tissue, have been estimated from dynamic PET scans. Equations describing the temporal behavior of the ^{13} NH_3 in the intra- and extracellular spaces were derived from this model. Integration of these equations, coupled with the energy density (keV/unit volume), yield a cumulative measure of the total energy deposition in the intra- and extracellular spaces. The energy density was derived from a previously published point kernel. Thus a direct calculation of the cellular level absorbed dose, based on patient-specific dynamic PET scan data, was possible. Using the nuclear mass fraction for cardiac tissue, the authors estimated the nuclear absorbed dose for normal and ischemic cardiac tissue at rest and under stress. The mean number of 'hits' in the nuclei was estimated and from this number, the percentage of cardiac cells inactivated (Cell Kill, or CK Index) can be estimated. This technique has promise for treatment planning in radioimmunotherapy and for palliative therapy in bone cancer. Using quantitative imaging (e.g., PET or SPECT), single-tissue kinetic modeling and calculations of regional tissue- specific energy depositions for other radiopharmaceuticals, it may be possible to estimate the cellular-level effectiveness of radionuclide therapy via calculation of the CK index.

31902 (CONF-910529–, pp. 396-418) **Application of PET and compartmental modeling in estimation of cellular level microdosimetry: PET studies of I-124 labeled 3F8 MAb in human glioma.** Daghighian, F. (Memorial Sloan-Kettering Cancer Center, New York, NY (United States)); Pentlow, K.S.; Larson, S.M.; Graham, M.C.; DiResta, G.R.; Yeh, S.D.J.; Macapinlac, H.; Finn, R.D.; Arbit, E.; Cheung, N.K.V. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., Atlanta, GA (United States). May 1992. From 5. international radiopharmaceutical dosimetry symposium; Oak Ridge, TN (United States); 7-10 May 1991. In *Fifth international radiopharmaceutical dosimetry symposium.* 625p. Order Number DE92013066. Source: OSTI; NTIS; INIS.

The authors present a method to estimate the radiation dose deposited in tumor cells by radiolabeled antibody using PET and tracer kinetic modeling. A patient with a glioma was injected with 96.2 MBq of I-124 labeled 3F8, a murine antibody (IgG3) specific against the ganglioside G_{D2}. Serial PET scans and plasma samples were taken over 11 days. A 3-compartmental model was used to estimate the plasma-to- tumor transfer constant (K_1); the tumor-to-plasma transfer constant (k_2), the association and dissociation constants (k_3, k_4) of antibody binding; and the binding potential, BP. Tumor radioactivity peaked at 18 hours at 0.0045 %IA/g. The kinetic parameters were estimated to be: $K_1 = 0.048$ ml/h/g, $k_2 = 0.16\ h^{-1}$, $k_3 = 0.03\ h^{-1}$, $k_4 = 0.015\ h^{-1}$, and BP = 2.25. Based on these kinetic parameters, the amount of tumor-bound radiolabeled MAb was calculated, and from this the dose deposited to the cell nucleus from Auger electrons was estimated to be 0.24 keV per tumor cell nucleus per MBq injected. This method permits microdosimetric estimates to be made at the cellular level based on in-vivo noninvasive measurements.

31903 (CONF-910529–, pp. 434-443) **Radiation dosimetry for Tc-99m MAG3 in adults and children.** Stabin, M.G. (Oak Ridge Associated Universities, TN (United States)); Taylor, A. Jr.; Conway, J.J.; Eshima, D.; Wooten, W.; Halama, J. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., Atlanta, GA (United States). May 1992. DOE Contract AC05-76OR00033. From 5. international radiopharmaceutical dosimetry symposium; Oak Ridge, TN (United States); 7-10 May 1991. In *Fifth international radiopharmaceutical dosimetry symposium.* 625p. Order Number DE92013066. Source: OSTI; NTIS; INIS.

Radiation dose estimates were calculated for the renal agents Tc-99m DTPA, Tc-99m MAG3, and I-131 OIH from biodistribution data gathered in groups of healthy human volunteers and in a few children of various ages. Biokinetics were evaluated by Anger camera imaging, blood sampling, and urine collection and counting. Collected data were fit to four or five compartmental models using the Simulation, Analysis, And Modeling (SAAM) software. Radiation dose estimates were performed using standard MIRD techniques. Average residence times in urinary bladder, kidney, and remainder of the body were used to predict radiation doses for the three agents. Doses for DTPA and MAG3 were very similar and much lower on a per unit injected activity than OIH. Residence times for the children were fairly similar for most organs, and the radiation dose estimates varied mostly according to the organ masses.

31904 (CONF-910529–, pp. 444-456) **Biokinetics and dosimetry of Tc-99m HM-PAO in children.** Vestergren, E. (Univ. of Goeteborg (Sweden)); Jacobsson, L.; Bjure, J.; Sixt, R.; Uvebrant, P.; Mattsson, S.; Johansson, L. American Society of

Heating, Refrigerating and Air-Conditioning Engineers, Inc., Atlanta, GA (United States). May 1992. From 5. international radiopharmaceutical dosimetry symposium; Oak Ridge, TN (United States); 7-10 May 1991. In *Fifth international radiopharmaceutical dosimetry symposium.* 625p. Order Number DE92013066. Source: OSTI; NTIS; INIS.

The aim of this investigation was to study the biokinetics of Tc-99m HM-PAO in children of different ages and to calculate the mean absorbed dose to various organs as well as the effective dose. Eight children aged between 7 weeks and 18 years were scanned with a gamma camera in anterior and posterior views at 1, 7 and 24 hours post-injection. The activity in the brain, lungs, liver, kidneys and in the intestines was quantified. Urine was collected during a 24-hour period. The fraction of activity taken up in the brain shows a strong age-dependence with higher values for young children. There also seems to be a weak age- dependence for the liver uptake. For the other measured organs, there was no significant age-dependence. After 24 hours, the fraction of injected activity excreted in urine was on the average 35% (corrected for physical decay). The mean absorbed dose to the total body and the effective dose (calculated with the same weighting factors for children as for adults) is 12 times higher per unit activity for a newborn than for an adult. However, if the activity at an investigation is administered in proportion to the body weight, the effective dose to children of all ages is close to the effective dose to an adult.

31905 (CONF-910529–, pp. 457-466) **An alternative to convolution integrals for radiation absorbed dose calculations.** Stabin, M.G. (Oak Ridge Associated Universities, TN (United States)); Watson, E.E. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., Atlanta, GA (United States). May 1992. DOE Contract AC05-76OR00033. From 5. international radiopharmaceutical dosimetry symposium; Oak Ridge, TN (United States); 7-10 May 1991. In *Fifth international radiopharmaceutical dosimetry symposium.* 625p. Order Number DE92013066. Source: OSTI; NTIS; INIS.

A simple method is shown which estimates the cumulated activity in a compartment which receives a time-varying input, without the use of convolution integrals. The method can be used in place of a convolution integral calculation if only cumulated activity is needed. The method does not give the expression for the time- dependence of activity in the compartment, only the integral of this function. If the time dependence must be known, convolution integrals or an equivalent method are needed.

31906 (CONF-910529–, pp. 483-497) **In vivo distribution and dosimetry of Tc-99m MIBI in man.** Leide, S. (Malmoe General Hospital (Sweden)); Diemer, H.; Ahlgren, L.; Mattsson, S. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., Atlanta, GA (United States). May 1992. From 5. international radiopharmaceutical dosimetry symposium; Oak Ridge, TN (United States); 7-10 May 1991. In *Fifth international radiopharmaceutical dosimetry symposium.* 625p. Order Number DE92013066. Source: OSTI; NTIS; INIS.

The biodistribution and dosimetry of Tc-99m MIBI (methoxy isobutyl isonitrile) which is used for myocardial imaging have been evaluated in 10 patients, 5 at rest and 5 under stress. After an intravenous injection the substance is rapidly cleared from the blood and taken up in various tissues and organs. The substance is mainly eliminated through the hepatobiliary system and excreted via the gall bladder through the gastrointestinal tract and through the kidneys. These organs will also get the highest absorbed doses, (2.6-6.7) 10^{-2} mGy/MBq. The effective dose was calculated to be 1.1×10^{-2} mSv/MBq. A typical examination starting with 500 MBq under stress and continuing with 700 MBq at rest will give an effective dose of 13 mSv which is very similar to that of an examination with 80 MBq T1-201.

31907 (CONF-910529–, pp. 531-543) **Development and validation of a simple model for cellular and cell cluster dosimetry with practical application in targeted radionuclide therapy.** Bardies, M. (Inst. National de la Sante et de la Recherche Medicale, Nantes (France)); Myers, M.J. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., Atlanta, GA (United States). May 1992. From 5. international radiopharmaceutical dosimetry symposium; Oak Ridge, TN (United States); 7-10 May 1991. In *Fifth international radiopharmaceutical dosimetry symposium.* 625p. Order Number DE92013066. Source: OSTI; NTIS; INIS.

The authors have developed an analytical technique for calculating the mean absorbed dose to the cell nucleus from a variety of spatial distributions of cells and activities and a wide range of emitted energies and radionuclides. The dose to the nucleus has been calculated using this method from activity distributed (1) on the cell surface (2) throughout the cytoplasm (3) throughout a cluster of cells (micrometastasis) and (4) on the surface of the cluster of cells. The derived absorption factors have been based on the latest point kernels of Berger and have been validated against published estimates. They show good agreement and the model has the advantage of being easily adapted for revisions and extensions of available low energy data. Data sets may be derived with the absorbed fractions or the absorbed dose per emission as a function of the radial extent of the activity, and either the individual energies of the emissions or the totality of the emissions from a particular radio-nuclide. The practical applications of the model have included: (a) calculation of the absorbed dose to radioimmunotargeted micrometastasis in the peritoneum; (b) calculations of doses to cells labelled on the surface with some novel emitters such as ^{67}Cu, ^{177} Lu, ^{153}Sm, ^{111}Ag, ^{186} Re, ^{188}Re as well as ^{131}I, ^{125}I and ^{90}Y; (c) comparison of doses to the cell nucleus from MIBG labelled with ^{125}I and ^{131}I and distributed in the cytoplasm of the cell; and (d) estimates of the absorbed dose to the cell nucleus from alpha emitters distributed on the surface of the cell.

31908 (CONF-910529–, pp. 557-576) **X-ray and radioiodine dose to thyroid follicular cells.** Faw, R.E. (Kansas State Univ., Manhattan (United States)); Eckerman, K.F.; Ryman, J.C. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., Atlanta, GA (United States). May 1992. DOE Contract AC05-84OR21400. From 5. international radiopharmaceutical dosimetry symposium; Oak Ridge, TN (United States); 7-10 May 1991. In *Fifth international radiopharmaceutical dosimetry symposium.* 625p. Order Number DE92013066. Source: OSTI; NTIS; INIS.

Radiation doses to the epithelial cells of thyroid follicles have been calculated for internal exposure by radionuclides of iodine and by secondary radiations created as a result of interactions of externally administered x rays with iodine naturally occurring in the thyroid. Calculations were performed for the thyroids of subjects ranging from the newborn to the adult male. Results for internal radionuclides are reported as the dose rate to follicular-cell nuclei per unit specific activity of the radionuclide in the thyroid as a whole, i.e., as the specific 'S value' as used in the MIRD method for internal dosimetry. Results for x rays are reported as the response function, i.e., the absorbed dose per unit fluence of primary x rays. Dose rates are subdivided into internal and external components, the former from radiations emitted within the colloid volume of any one follicle, and the latter from radiations emitted throughout the thyroid in follicles surrounding that one follicle.

31909 (CONF-910529–, pp. 577-588) **The application of the distance histogram in microdosimetry for evaluating heterogeneity.** Dieren, E.B. van (Free University Hospital, Amsterdam (Netherlands)); Lingen, A. van; Roos, J.C.; Teule, G.J.J. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., Atlanta, GA (United States). May 1992. From 5. international radiopharmaceutical dosimetry symposium; Oak Ridge, TN (United States); 7-10 May 1991. In *Fifth international radiopharmaceutical dosimetry symposium.* 625p. Order Number DE92013066. Source: OSTI; NTIS; INIS.

Heterogeneity of radionuclide distributions at a microscopic level is relevant for the dosimetry of short path-length emissions. The present study explores the methodological aspects and the limitations of source target histograms by using computer simulations of radionuclide distributions. Sources were formed by labeled cells, containing 50 decay sites each. Cell nuclei were considered as targets. Within a matrix of 2,500 cells, the authors investigated uniform distributions (MIRD assumption), various cluster sizes, the single labeled cell, and a random distribution. Furthermore, four different intracellular source localizations were studied in a matrix of one cell. The distance histograms for both matrices were combined. For both ^{125}I and ^{131}I , absorbed doses in the targets were calculated from multiplication of the distance histograms by the point source absorbed radiation dose distribution. The presented results indicate that the use of distance histograms might be a mathematically convenient approach to microdosimetrical studies. They provide a means to study combinations of source distributions at various levels of magnification for several radionuclides within a reasonable calculation time.

31910 (DOE/ER/60600–2) **[A clinical trial of neutron capture therapy for brain tumors]: Technical progress report 1989.** Zamenhof, R.G. New England Medical Center, Boston, MA (United States). [1989]. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-87ER60600. Order Number DE92040179. Source: OSTI; NTIS; INIS; GPO Dep.

This report describes accomplishments by this laboratory concerning development of high-resolution alpha-autoradiography design of an optimized epithermal neutron beam dosimetry and treatment planning Using Monte Carlo techniques development of a prompt-gamma ^{10}B analysis facility.

31911 (DOE/ER/60951–3) **[Development and recommendations in the area of ionizing and nonionizing radiations]: Progress report, 1 September 1991–30 April 1992.** National Council on Radiation Protection and Measurements, Bethesda, MD (United States). This report briefly describes seven publications produced in 1991–1992 under the auspices of the National Council on Radiation Protection and Measurements. In addition current status of additional publications in preparation are outlined.

31912 (DOE/ER/61029–9) **Study of the atmospheric chemistry of radon progeny in laboratory and real indoor atmospheres: Progress report, July 1, 1991–June 30, 1992.** Hopke, P.K. Clarkson Univ., Potsdam, NY (United States). Dept. of Chemistry. Jul 1992. 19p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-90ER61029. Order Number DE92019169. Source: OSTI; NTIS; GPO Dep.

This report covers the second year of the 28 month grant current grant to Clarkson University to study the chemical and physical behavior of the polonium 218 atom immediately following its formation by the alpha decay of radon. Because small changes in size for activity result in large changes in the delivered dose per unit exposure, this behavior must be understood if the exposure to radon progeny and it dose to the cells in the respiratory tract are to be fully assessed. Two areas of radon progeny behavior are being pursued; laboratory studies under controlled conditions to better understand the fundamental physical and chemical process that affect the progeny's atmospheric behavior and studies in actual indoor environments to develop a better assessment of the exposure of the occupants of that space to the size and concentration of the indoor radioactive aerosol. This report describes the progress toward achieving these objectives.

31913 (DOE/ER/61150–1, pp. 2) **Effect of stereoisomers (d,l and meso) of Tc-99m HMPAO on platelet kinetics in Beagle dogs: Comparison with In-111 labeled platelets.** Dewanjee, M.K. (Univ. of Miami, FL (United States)); Ghafouripour, A.K.; Kapadvanjwala, M.; Ganz, W.I.; Serafini, A.N.; Sfakianakis, G.N. Massachusetts Univ. Medical Center, Worcester, MA (United States). [1991]. (CONF-9106140–: 7. international symposium on radiopharmacology, Boston, MA (United States), 3-6 Jun 1991). In *The seventh international symposium on radiopharmacology. Program and abstracts.* 102p. Order Number DE92015724. Source: OSTI; NTIS.

The clearance of stereoisomer of (d,l) Tc-99m HMPAO from the brain was found slower than that of meso isomer. The authors wanted to test the hypothesis, whether this difference of cerebral-clearance also holds true for Tc-99m HMPAO labeled autologous platelets. They carried platelet-kinetics with both stereoisomers. HMPAO stereoisomers were synthesized and separated by fractional crystallization (8X). Sn(II)-HMPAO kits were prepared and lyophilized. Forty three milliliters of blood were collected in 7 ml of ACD anticoagulant and platelet-labeling was carried out in ACD-saline media with 40-50 mCi of freshly eluted Tc-99m pertechnetate from M-99– > Tc-99m generator. Time-dependence of platelet-uptake was studied by incubation of aliquots of platelets with stereoisomers of Tc-99m HMPAO. Platelet-kinetics were repeated five times in two conditioned Beagle dogs after injection of 30-35 mCi of Tc-99m labeled autologous platelets. Serial blood samples were obtained by veni-puncture at 10, 30, 120, 240, 320 minutes, 24, 48 and 72 hours. The blood samples were centrifuged and radioactivity in plasma and cell pellet was determined with a gamma-counter. After lysing the labeled platelets the Tc-99m radioactivity in the cytoplasmic proteins and organelles was determined with a gamma-counter; 50-60% of the radioactivity in the cytoplasm was protein-bound. The values of mean and standard deviation of labeling efficiency, platelet-survival time (exponential) and recovery were calculated and tabulated.

31914 (DOE/ER/61150–1, pp. 3) **^{153}Sm-EDTMP and ^{99m}Tc-EDTMP - The radiopharmacology of two potential bone metastasis radiopharmaceuticals.** Hiltunen, J.V. (MAP Medical Technologies Inc., Espoo (Finland)); Nikula, T.K.; Penttilae, P.I.; Bergstroem, K.; Mussalo, H.; Kuikka, J.T.; Laensimies, E. Massachusetts Univ. Medical Center, Worcester, MA (United States). [1991]. (CONF-9106140–: 7. international symposium on radiopharmacology, Boston, MA (United States), 3-6 Jun 1991). In *The seventh international symposium on radiopharmacology. Program and abstracts.* 102p. Order Number DE92015724. Source: OSTI; NTIS.

While $^{153}Sm^{3+}$ binds directly to EDTMP in aqueous media at pH 7.5, $^{99m}TcO_4-$ has first to be reduced to valence state +5 until it is capable of forming stable binding with EDTMP. After labeling both are buffered, made isotonic and sterilized to form injectable solutions. ^{153}Sm-EDTMP is known to be stable in vivo. In this study ^{99m}Tc-EDTMP was found to be stable in vitro even at high specific activities for at least 48 hrs. Both radiopharmaceuticals showed rapid uptake to bones. All the large bones were clearly visible at early images. Blood clearance was fast. The unbound pharmaceuticals excreted rapidly through kidneys, more than 60% of injected dose was removed within first day in both cases. The biodistributions at 24 hrs pi showed activities/gram of organ to decrease in the pattern: large bones (knees, back bone) > kidneys > liver > other organs in both cases. The ^{99m}Tc-EDTMP showed some 1,5 times higher bone-to-other tissue ratios than ^{153}Sm-EDTMP. The later biodistributions showed similar patterns. The bones retained activity better than other tissues, so that bone-to other organ ratios increased. The same difference between ^{99m}Tc and ^{153}Sm was preserved. These results suggest that the two radiopharmaceuticals may be useful in treatment and diagnosis of bone metastasis.

31915 (DOE/ER/61150–1, pp. 21) **Structure-activity relationships among nitroimidazole nucleosides used as markers of tissue hypoxia.** Wiebe, L.I. (Univ. of Alberta, Edmonton (Canada)); Mannan, R.H.; Mercer, J.R.; Chapman, J.D.; Haverland, G.W. Massachusetts Univ. Medical Center, Worcester, MA (United States). [1991]. (CONF-9106140–: 7. international symposium on radiopharmacology, Boston, MA (United States), 3-6 Jun 1991). In *The seventh international symposium on radiopharmacology. Program and abstracts.* 102p. Order Number DE92015724. Source: OSTI; NTIS.

Lipophilicity and singly electron reduction potential (E_7^1) have been identified as the principle physico-chemical properties that govern both the efficacy and the toxicity of nitroimidazole radiosensitizers. A new generation of 2-nitroimidazole derivatives, the N-1 glycosides, have now been synthesized and tested in in vitro and in vivo biological systems. Data include measurements of lipophilicity (P) and in vitro cytotoxicity, sensitizer enhancement ratios (SER), sensitizer binding rates and oxygen-dependent binding. In vivo studies include biodistribution, excretion and (hypoxic) tumor uptake in an animal tumor model. Data analysis indicates a complex set of interrelationships among the parameters measured. In general terms, SER can be defined as a function of cytotoxicity and binding rate, but these parameters can be related to P only within narrow structural parameters. Uptake by hypoxic tumors in vivo does not appear to be a function of either P or SER. Original data and derived correlative data are presented and discussed in detail.

31916 (DOE/ER/61150–1, pp. 28) **Tissue localization of ^{125}I-Triiodothyronine in the periorbital area of mice: A microautoradiographic study.** Sawas-Dimopoulou, C. (Univ. of Athens (Greece)); Papanastasiou, E.; Angelis, A.; Margaritis, L. Massachusetts Univ. Medical Center, Worcester, MA (United States). [1991]. (CONF-9106140–: 7. international symposium on radiopharmacology, Boston, MA (United States), 3-6 Jun 1991). In *The seventh international symposium on radiopharmacology. Program and abstracts.* 102p. Order Number DE92015724. Source: OSTI; NTIS.

A significant retention of ^{125}I-Triiodothyronine (^{125}I-T_3) in the retrobulbar orbital area of mice has been previously shown. The present study was initiated to determine tissue and intracellular localization of the thyroid hormone in the above area which is concerned in human Grave's disease of thyroid. Male and female Balb C mice were intravenously injected with 0.1 ml ^{125}I-T_3 (0.2 mCi/μg). Light microscope autoradiography demonstrated that ^{125}I-T_3 injected intravenously is rapidly transported in the cells of tissues of the peribulbar orbital area, with glandular or muscular function: the hormone showed a high affinity for the intra- and extraorbital lachrymal gland cells, the cells of the Harder's gland, those of the sebaceous and meibronian glands of the eyelids, as well as for local muscular structures. Electron microscope autoradiography showed that radioactivity is already localized inside the cells 30 seconds after the i.v. injection of ^{125}I-T_3 and distributed throughout the cytoplasm, with a higher concentration in the vesicles of the Harderian gland cells (rich in porphyrin and lipids), in the endoplasmic reticulum and the mitochondria of the lachrymal glands. Ten min. after injection, a shifting of the radioactivity towards the nucleus area was observed.

31917 (DOE/ER/61150–1, pp. 42) **Enhancement of liver uptake of a radioiodinated triglyceride analog by prior incorporation into a lipoprotein-like emulsion.** Schwendner, S.W. (Univ. of Michigan, Ann Arbor (United States)); Ruyan, M.; Counsell, R.E.; Skinner, R.W.S. Massachusetts Univ. Medical Center, Worcester, MA (United States). [1991]. (CONF-9106140–: 7. international symposium on radiopharmacology, Boston, MA (United States), 3-6 Jun 1991). In *The seventh international symposium on radiopharmacology. Program and abstracts.* 102p. Order Number DE92015724. Source: OSTI; NTIS.

A radioiodinated triglyceride analog, (^{125}I)-glycerol-2-palmitoyl-1,3-di-15-(p-iodophenyl)pentadecanoate (DPPG) has been synthesized and administered to rats formulated in a detergent-saline vehicle. Upon intravenous administration to female rats, the compound rapidly becomes associated with plasma lipoproteins, especially high density lipoprotein (HDL) as shown by polyacrylamide gel electrophoresis. By 15 min following administration 52% of the dose accumulates within the liver. With time, the radioactivity clears and more activity appears as the fatty acid metabolite than as parent compound. Administration of DPPG to rats with altered lipoprotein metabolism including decreased hepatic triglyceride lipase (HL), such as streptozotocin-induced diabetic rats or rats chronically fed ethanol, show a decrease in liver uptake of radioactivity and a delay in clearance of the DPPG. Similar results were obtained noninvasively with gamma camera scintigraphy.

31918 (DOE/ER/61150–1, pp. 55) **Tissue distribution and biokinetics of radiolabeled proteins in rats with a focal infection.** Claessens, R.A.M.J. (University Hospital, Nijmegen (Netherlands)); Oyen, W.J.G.; Meer, J.W.M. van der; Corstens, F.H.M. Massachusetts Univ. Medical Center, Worcester, MA (United States). [1991]. (CONF-9106140–: 7. international symposium on radiopharmacology, Boston, MA (United States), 3-6 Jun 1991). In *The seventh international symposium on radiopharmacology. Program and abstracts.* 102p. Order Number DE92015724. Source: OSTI; NTIS.

In order to evaluate the influence of both the type of radionuclide and protein on accumulation of radiolabeled human non-specific immunoglobulin G in infectious foci, six combinations of three proteins and three radiolabels were studied in rats. In-111 labeled human immunoglobulin G (IgG), I-123-IgG, Tc-99m-IgG, In-111 labeled human serum albumin (HSA), I-131-HSA, and In-111 human immunoglobulin A (IgA) were administered intravenously to rats with a calf muscle infection due to Staphylococcus aureus. For labeling with In-111 the proteins were conjugated to DTPA using DTPA bicyclic anhydride. Labeling with I-123 was performed by means of the iodogen method. The tissue distribution, expressed as percentage of injected dose per gram tissue, was determined at 2, 6, 24, and 48 hours after injection in groups of six rats. For all the preparations studied at all sampling times a marked difference was found between the uptake in the infected and the normal calf muscle. At 2 and 6 hr. p.i. the abscess uptake for indium labeled and iodinated IgG as well as for both HSA preparations showed no major differences. However the abscess uptake for IgA was markedly lower than for the other preparations. This could be attributed to the high uptake of In-111-IgA in liver, spleen, and kidneys, causing a rapid fall in blood concentration of IgA. From 6 hr. on the abscess uptake of I-131-HSA and, to a lesser degree, Tc-99m-IgG and I-123-IgG showed a decreasing trend. To the contrary, the indium labeled preparations were retained in the abscesses and in the other tissues.

31919 (DOE/ER/61150–1, pp. 60) **[^{35}S] cysteamine and 2-aminoethylisothio uronium bromide hydrobromide: Improved syntheses, biodistributions and implications of protection from radionuclides.** Harapanhalli, R.S. (Univ. of Medicine and Dentistry of New Jersey, Newark (United States)); Narra, V.R.; Howell, R.W.; Rao, D.V.; Sastry, K.S.R. Massachusetts Univ. Medical Center, Worcester, MA (United States). [1991]. (CONF-9106140–: 7. international symposium on radiopharmacology, Boston, MA (United States), 3-6 Jun 1991). In *The seventh international symposium on radiopharmacology. Program and abstracts.* 102p. Order Number DE92015724. Source: OSTI; NTIS.

In the present work, high specific activity [^{35}S] MEA and AET were synthesized by improved methods of one-pot approach and were used for biodistribution studies in mice. In order to find basis for observed radioprotection, testicular retention of the activity was established over extended time (144h) after i.t. injections of the labeled chemicals. In view of the practical considerations for systemic versus local administration, the activity distributions were determined (0.25-144 h) in various organs by giving trace quantities of these chemicals orally ($\sim$ 1 μg per gram body weight of mouse). The results were expressed as percent activity per gram organ and were compared with earlier literature on higher quantities of administered chemicals. The distribution of activity in radiosensitive organs namely testis and bone marrow was studied at the microscopic level by cell fractionation methods. The details of advantages of improved syntheses and the significance of biodistribution data are discussed along with the implications of protection from incorporated radionuclides in vivo.

31920 (DOE/ER/61150–1, pp. 61) **Elevated brain uptake of ^{59} citrate: Correlation with the critical period of brain development in experimental phenylketonuria.** Sawas-Dimopoulou, C. (National Center for Scientific Research Demokritos, Attiki (Greece)); Soulpi, K. Massachusetts Univ. Medical Center, Worcester, MA (United States). [1991]. (CONF-9106140–: 7. international symposium on radiopharmacology, Boston, MA (United States), 3-6 Jun 1991). In *The seventh international symposium on radiopharmacology. Program and abstracts.* 102p. Order Number DE92015724. Source: OSTI; NTIS.

Altered biochemistry in a critical period of brain development can provoke significant and sometimes definitive changes in brain physiology by a mechanism not quite clear. The present work has been designed to determine the critical age of brain development in which phenylketonuria can induce definite changes in adult age. Wistar rats in groups of 8 were made phenylketonuric by a 5d series of i.p. injections of p-Chlorophenylalanine (p-Chl) and phenylalanine (Phe) beginning at 8 or 22, 28, 43 and 54 d after birth. In parallel series, rats received only Phe, whereas the litter-mate controls were injected with saline. At the age of 60 d, the animals were i.v. injected with ^{59}Fe citrate and a 6 hr-biodistribution study was performed. A significant increase of ^{59}Fe-brain concentration was shown when the newborn rats were made phenylketonuric by p-Chl+Phe treatment at the age of 8 to 12 d. The results suggest that in the developing brain, phenylketonuria in the period from 8 to 12 d after birth is critical in inducing definite changes of brain iron metabolism.

31921 (DOE/ER/61150–1, pp. 78) **Effect of stereoisomers (d,l and meso) of Tc-99m HMPAO on ligand exchange and**

binding with hemoglobin: Comparison with In-111 tropolone. Dewanjee, M.K. (Univ. of Miami School of Medicine, FL (United States)); Ghafouripour, A.K.; Kapadvanjwala, M.; Ganz, W.I.; Serafini, A.N.; Sfakianakis, G.N. Massachusetts Univ. Medical Center, Worcester, MA (United States). [1991]. (CONF-9106140–: 7. international symposium on radiopharmacology, Boston, MA (United States), 3-6 Jun 1991). In *The seventh international symposium on radiopharmacology. Program and abstracts.* 102p. Order Number DE92015724. Source: OSTI; NTIS.

The binding of Tc-HMPAO to intracellular proteins results in the retention of Tc-HMPAO in the labeled cellular elements of blood and brain. The authors studied the kinetics of binding of stereoisomers of Tc-99m HMPAO directly to hemoglobin and RBC-uptake by incubation using canine red cells. HMPAO stereoisomers were synthesized in the laboratory and separated by fractional crystallization (8X). Sn(II)-HMPAO kits were prepared and lyophilized. Forty three milliliters of blood were collected in 7 ml of ACD anticoagulant and RBC-labeling was carried out in ACD-saline media. After incubation for 60 minutes, the labeled RBCs were washed and lysed with water and hemoglobin was separated from membrane by centrifugation and membrane-filtration. Hemoglobin separated by RBC-lysis with water was centrifuged and aliquots were incubated with stereoisomers of Tc-99m HMPAO (100 uCi). The Tc-99m bound hemoglobin was separated by precipitation with absolute ethanol and 20% trichloroacetic acid. The results of uptake and binding with hemoglobin and globin are tabulated. The kinetics of RBC uptake of both isomers is similar; although the labeling efficiency with meso is lower than that of d,1 stereoisomer (75% vs. 85%). The membrane retards the binding of Tc-HMPAO to hemoglobin. The direct binding of the stereoisomers to hemoglobin reaches saturation level instantaneously. Ligand exchange of Tc-HMPAO to sulfhydryl-rich segment of hemoglobin may result in binding and retention of Tc-HMPAO to red cells.

31922 (INFO–0417-1) **Occupational radiation exposure and mortality study: Internal linkage of the Canadian National Dose Registry.** Coppock, E. (Statistics Canada, Ottawa, ON (Canada)); Dobson, D.; Fair, M. Atomic Energy Control Board, Ottawa, ON (Canada). Jun 1992. 64p. Order Number DE92644040. Source: OSTI; NTIS (US Sales Only); INIS.

An epidemiological cohort study of some 300,000 Canadians enrolled in the National Dose Registry (NDR) is being undertaken to determine if there is excess cancer or other causes of mortality among those workers who are occupationally exposed to low levels of ionizing radiation. The results of this study may provide better understanding of the dose-response relationship for low doses of ionizing radiation and aid in the verification of risk estimates for radiation-induced cancer mortality. The Department of National Health and Welfare (DNHW) is responsible for the Registry; this study is being carried out by the Bureau of Radiation and Medical Devices (BRMD) with financial assistance and co-operation of various agencies including Statistics Canada and the Atomic Energy Control Board.

31956 (JINR–16-90-482) **Data bank of individual dosimtry control in the JINR.** Buchnev, V.N.; Kryachko, A.P. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Dept. of Radiation Safety. 1990. 12p. (In Russian). Order Number DE92644156. Source: OSTI; NTIS (US Sales Only); INIS.

A data bank realises storing, updating, retrieval, statistics processing, and output to end users personal and dose information for over 2500 persons, controlled monthly or quaterly for external (beta, gamma, neutron) radiation. The basic components of the data bank are a data base (personal and dose files as current as archival) and a package of application programs for the work with the data base in the dialog mode by means of menus. The data bank was organized on the basis of the 'Pravets-16' PC with assistance of the relational DBMS dBASE3 PLUS and the Clipper compiler for the interpretive dBASEE3 programming language, working under the control DOS-16, version 3.10. 7 refs.; 8 figs.

31957 (JINR-D–19-90-457, pp. 242-261) **Effect of millimeter radiation on radiationinduced repair of genome conformation state.** Belyaev, I.Ya. (Moskovskij Inzhenerno-Fizicheskij Inst., Moscow (Russian Federation)); Alipov, E.D.; Shcheglov, V.S.; Edneral, D.I.; Lystsov, V.N. Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1990. 304p. (In Russian). (CONF-9006421–: Workshop on DNA Repair on Mutagenesis Induced by Radiation, Dubna (USSR), 12-14 Jun 1990). In *Genetic effects of charged particles: Proceedings of conference.* Order Number DE93000803. Source: OSTI; NTIS (US Sales Only); INIS.

Effect of millimeter waves on repair of genome conformation state following E.Coli cells with x-radiation was studied. From the presented data effect of microwaves on repair of genome conformation states was impossible to explain by routine thermal effects. Local transitions of DNA forms varying in spirality were shown to play certain role in efficiency of polarized electromagnetic and low dose ionizing radiation. 24 refs.; 7 figs.; 5 tabs.

31958 (JINR-D–19-90-457, pp. 236-241) **Postradiation recovery and radioresistance of seeds.** Atayan, R.R.; Semerdzhyan, S.P. Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1990. 304p. (In Russian). (CONF-9006421–: Workshop on DNA Repair on Mutagenesis Induced by Radiation, Dubna (USSR), 12-14 Jun 1990). In *Genetic effects of charged particles: Proceedings of conference.* Order Number DE93000803. Source: OSTI; NTIS (US Sales Only); INIS.

Problems on radiobiology of seeds were studied. Irradiation was shown to induce primary injuries in chromosomes sensitive to various modifying factors. Primary injuries can eliminate and form stable physico-chemical injuries as a result of physico-chemical reactions and under concomitant factors. These injuries can be reversible and nonreversible character. Reversible injuries turned out to be potential for they can be repaired at biochemical level. The cells of strong ability to repair postirradiation injuries under various equal conditions reveal a relatively high level of radioresistance. The mechanisms were shown to be basical in the observed differences of radiosensitivity of large and small seeds. 7 refs.; 3 figs.

31959 (JINR-D–19-90-457) **Genetic effects of charged particles: Proceedings of conference.** Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1990. 304p. (CONF-9006421–: Workshop on DNA Repair on Mutagenesis Induced by Radiation, Dubna (USSR), 12-14 Jun 1990). Order Number DE93000803. Source: OSTI; NTIS (US Sales Only); INIS.

This volume contains the proceedings of the conference entitled Genetic Effects of Charged Particles held in Dubna, Ukrainian Soviet Socialist Republic June 1990. Selected presentations were abstracted and indexed for the database.

31960 (JINR-D–19-90-457, pp. 11-29) **Low dose radiation effects: a holistic model.** Oftedal, P. Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1990. (CONF-9006421–: Workshop on DNA Repair on Mutagenesis Induced by Radiation, Dubna (USSR), 12-14 Jun 1990). In *Genetic effects of charged particles: Proceedings of conference.* 304p. Order Number DE93000803. Source: OSTI; NTIS (US Sales Only); INIS.

Mathematical model of low dose irradiation effects based on molecular and physiological parameters of cell response was presented. Data mainly on three aspects of the problem were used: - fact of presence of nonmonotonous discontinuous dose-effect dependences with respect to low doses was taken into consideration. Selection of such curves was based on empirical approach and needed analytical assessment; - effects of adaptive response of animal cells and induced repair systems were taken into consideration; - occurrence of optimal bioeconomical process was supposed to be a basis of effect of various background radiation on the organism. 29 refs.; 6 figs.

31961 (JINR-D–19-90-457, pp. 30-38) **Modification of γ-induced mutagenesis in Ames test-strains: 1. Radioprotector effect on mutagenesis in Salmonella typhimurium.** Basha, S.G.; Krasavin, E.A.; Kozubek, S.; Amirtaev, K.G. Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1990. (In Russian). (CONF-9006421–: Workshop on DNA Repair on Mutagenesis Induced by Radiation, Dubna (USSR), 12-14 Jun 1990). In *Genetic effects of charged particles: Proceedings of conference.* 304p. Order Number DE93000803. Source: OSTI; NTIS (US Sales Only); INIS.

Glycerine and cysteamine protective effect on mutagenesis was studied in 3 strains of Salmonella typhimurium under γ-radiation. Glycerine modifying effect was shown to be not similar for various test-strains and depended on DNA injury nature. DNA complex injuries were shown to play significant role in mutagenesis of TA100 and TA102 strains. Absence of cysteamine modifying effect on γ-induced mutagenesis testified to cysteamine effect on enzyme balance. 20 refs.; 2 figs.; 1 tab.

31962 (JINR-D–19-90-457, pp. 39-44) **Modification of γ-induced mutagenesis in Ames test-strains: 2. TAN effect on Salmonella typhimurium mutagenesis.** Basha, S.G.; Krasavin, E.A.; Kozubek, S.; Amirtaev, K.G. Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1990. (In Russian). (CONF-9006421–: Workshop on DNA Repair on Mutagenesis Induced by Radiation, Dubna (USSR), 12-14 Jun 1990). In *Genetic effects of charged particles: Proceedings of conference.* 304p. Order Number DE93000803. Source: OSTI; NTIS (US Sales Only); INIS.

Modifying affect of anoxic sensitizers on yield of γ-induced mutations was studied in prokaryotes. TAN presence considerably increased yield of induced reversions in the strains. Various degrees of modifications of γ-induced mutagenesis with TAN testified to the fact that efficiency of its interaction with DNA depended on the type of injured basis. Probably during TAN interaction with damaged guanine or cytosine more effectively modified the basis into premutation event than in case of interacting with thymine. 9 refs.; 2 figs.; 2 tabs.

31963 (JINR-D–19-90-457, pp. 45-48) **Effect of durable γ-radiation on E.Coli.** Koudela, K.; Drashil, V. Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1990. (In Russian). (CONF-9006421–: Workshop on DNA Repair on Mutagenesis Induced by Radiation, Dubna (USSR), 12-14 Jun 1990). In *Genetic effects of charged particles: Proceedings of conference.* 304p. Order Number DE93000803. Source: OSTI; NTIS (US Sales Only); INIS.

Effect of prolonged low intensity γ-radiation on changes of frequency of reversion mutations was studied in Escherichia Coli. Frequency of His^+ revertants was shown to depend on growth phase. Cellular DNA absorbed more energy in stationary than DNA in growth phase. K-12 AB2497 strain of Escherichia Coli D-37 comprised about 60 Gy. This dose wasn't absorbed under continuous irradiation at dose rate of 0.21 R/min in 5 hours. The dose rate was considered to be sufficient to induce SOS-system and thus to increase mutations number. 2 refs.

31964 (JINR-D–19-90-457, pp. 49-58) **Induction of SOS-system in E.Coli under γ-irradiation in the presence of anoxic sensitizer TAN.** Komova, O.V.; Kozubek, S.; Krasavin, E.A. Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1990. (In Russian). (CONF-9006421–: Workshop on DNA Repair on Mutagenesis Induced by Radiation, Dubna (USSR), 12-14 Jun 1990). In *Genetic effects of charged particles: Proceedings of conference.* 304p. Order Number DE93000803. Source: OSTI; NTIS (US Sales Only); INIS.

TAN binding with radiation-induced DNA radicals didn't result in increase of DNA single breaks. Two-fold increase of injuries yield non-modified by oxygen and repaired with the help of recA - lexA - dependent repair in case of TAN presence was revealed. The most sensitizing effect among W3110, AB2463, P3478 strains was revealed in recA - mutant. TAN minimal sensitizing effect was observed in polA - mutant. 6 refs.; 4 figs.; 2 tabs.

31965 (JINR-D–19-90-457, pp. 59-68) **Post-irradiation DNA degradation in certain repair-deficient E.Coli strains.** Bonev, M.N.; Sivriev, I.K. Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1990. (CONF-9006421–: Workshop on DNA Repair on Mutagenesis Induced by Radiation, Dubna (USSR), 12-14 Jun 1990). In *Genetic effects of charged particles: Proceedings of conference.* 304p. Order Number DE93000803. Source: OSTI; NTIS (US Sales Only); INIS.

To make clearer the role of the repair systems in DNA the recA, lexA, recBC$^-$ and pol4$^-$ mutant cells were subjected to γ-irradiation. It was shown that the cultivation of the cells in nutrient media after irradiation essentially alters the cell recovery. Polyfunctional nature of the RecA protein completely manifests itself and in particular as a protease cleaves sufficiently of λ-repressor in order to defy the prophafe induction. It is believed that the presence of λ-repressor in a host-cell is an additional weight on the recA - lexA - dependent repair and that the additional cleavage of the λ-repressor perturbs and restricts RecA protein to protect DNA gaps. Thus the repair capability of the cell reduces and DNA degradation increases. 24 refs.; 4 figs.; 1 tab.

31966 (JINR-D–19-90-457, pp. 68-83) **Kinetics of formation of induced mutants of Saccharomyces cerevisiae.** Chepurnoj, A.I.; Levkovich, N.V.; Mikhova-Tsenova, N.; Mel'nikova, L.A. Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1990. (In Russian). (CONF-9006421–: Workshop on DNA Repair on Mutagenesis Induced by Radiation, Dubna (USSR), 12-14 Jun 1990). In *Genetic effects of charged particles: Proceedings of conference.* 304p. Order Number DE93000803. Source: OSTI; NTIS (US Sales Only); INIS.

UV and γ-radiation mutagenic effect an various strains of Saccharomyces cerevisiae was studied by analyzing formation kinetics of induced mutants at the period of postirradiation incubation. Mechanisms of induced reverse formation was suggested. The presented analysis is considered to be differential taking account of more subtle aspects of induced mutagenesis. 8 refs.; 10 figs.; 3 tabs.

31967 (JINR-D–19-90-457, pp. 104-105) **Microdosimetrical calculations of the rate of repairable DNA - double strand breaks based on a model for the interpretation of experiments with different doses and radiation qualities.** Rosemann, M.; Regel, K. Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1990. (CONF-9006421–: Workshop on DNA Repair on Mutagenesis Induced by Radiation, Dubna (USSR), 12-14 Jun 1990). In *Genetic effects of charged particles: Proceedings of conference.* 304p. Order Number DE93000803. Source: OSTI; NTIS (US Sales Only); INIS.

When comparing various DNA injuries induced by radiation double breaks were shown to play peculiar role in subsequent cell changes such as inactivation, aberrations, mutations and transformations. However it was proved that significant part of radiation-induced double breaks could be repaied within cell. 3 refs.

31968 (JINR-D–19-90-457, pp. 106-117) **Modifying influence of DNA synthesis inhibitors on the effect of irradiation of Chinese hamster cells.** Govorun, R.D.; Krasavin, E.A.; Lobachevskij, P.N.; Nasonova, E.A.; Pertsova, T.B. Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1990. (CONF-9006421–: Workshop on DNA Repair on Mutagenesis Induced by Radiation, Dubna (USSR), 12-14 Jun 1990). In *Genetic effects of charged particles: Proceedings of conference.* 304p. Order Number DE93000803. Source: OSTI; NTIS (US Sales Only); INIS.

The difficulties were shown that faces when studying the effect of radiation of different quality at the chromosome level. The correct interpretation of the results is possible on considering the influence of ionizing radiations on the cell cycle characteristics. 20 refs.; 3 figs.; 3 tabs.

31969 (JINR-D–19-90-457, pp. 118-126) **Regularities of DNA synthesis repair in populations of irradiated mammalian cells.** Smirnova, S.G. (Akademiya Meditsinskikh Nauk SSSR, Obninsk (Russian Federation). Nauchno-Issledovatel'skij Inst. Meditsinskoj Radiologii); Synzynys, B.I.; Saenko, A.S. Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1990. (In Russian). (CONF-9006421–: Workshop on DNA Repair on Mutagenesis Induced by Radiation, Dubna (USSR), 12-14 Jun 1990). In *Genetic effects of charged particles: Proceedings of conference.* 304p. Order Number DE93000803. Source: OSTI; NTIS (US Sales Only); INIS.

Change in DNA synthesis rate in cell synchronous culture under radiation was shown to present result of summation of various processes (proper repair, cell transition from G_1 stage into synthesis stage). Experiments with cycloheximide and actinomycin D revealed that processes resulting in DNA synthesis rate increase were inducible. Supposedly DNA synthesis in the cells following irradiation differed from DNA replication in their properties in intact cells. At this stage the problem on DNA synthesis regularities remains open. 16 refs.; 4 figs.

31970 (JINR-D–19-90-457, pp. 127-134) **Comparative study of qualitative cytogenetic effects induced by fractionated γ-neutron irradiation in man lymphocytes at G_0 and G_1 stages.** Pozdyshkina, O.V. (Akademiya Meditsinskikh Nauk SSSR, Obninsk (Russian Federation). Nauchno-Issledovatel'skij Inst. Meditsinskoj Radiologii); Sevan'kaev, A.V. Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1990. (In Russian). (CONF-9006421–: Workshop on DNA Repair on Mutagenesis Induced by Radiation, Dubna (USSR), 12-14 Jun 1990). In *Genetic effects of charged particles: Proceedings of conference.* 304p. Order Number DE93000803. Source: OSTI; NTIS (US Sales Only); INIS.

Comparative analysis of cytogentic effects observed in case of fractionated γ-neutron irradiation of man lymphocytes of G_0 and G_1 stages within wide dose range shown: various degree of chromatin contactization in resting and proliferating cells (contactization affected the intensity of repair processes); various manifestation of injury recoveries (injuries induced by various radiations); differential division delay that was shown to depend on radiation type. Data on possible adaptive effect of first dose fraction on repeated cell irradiation were geiven. 8 refs.; 2 figs.; 1 tab.

31971 (JINR-D–19-90-457, pp. 135-139) **Radiosensitivity of L5178Y mice lymphoma cells and state of antioxidant enzyme system.** Rosek, O.; Yavorska, A. Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1990. (In Russian). (CONF-9006421–: Workshop on DNA Repair on Mutagenesis Induced by Radiation, Dubna (USSR), 12-14 Jun 1990). In *Genetic effects of charged particles: Proceedings of conference.* 304p. Order Number DE93000803. Source: OSTI; NTIS (US Sales Only); INIS.

Results of experiments in which primary antioxidant enzyme LY-R and LY-S cell system were presented. It was attempted to affect radiosensitivity of the presented cells through this system. Data on correlation between cell radiosensitivity and superoxidedismutase were presented. 24 refs.; 2 tabs.

31972 (JINR-D–19-90-457, pp. 140-147) **X-radiation and hydrogen peroxide induce adaptation of lymphocytes of man peripheral blood to subsequent x-irradiation.** Bouzhik, Eh.; Rosek, O.; Voevodska, M. Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1990. (In Russian). (CONF-9006421–: Workshop on DNA Repair on Mutagenesis Induced by Radiation, Dubna (USSR), 12-14 Jun 1990). In *Genetic effects of charged particles:*

Proceedings of conference. 304p. Order Number DE93000803. Source: OSTI; NTIS (US Sales Only); INIS.

Attention was drawn to repair induction occurring during DNA injuries and in chromatin in process of studying mechanism of lymphocyte adaptive response. Detailed study of time dependences in lymphocyte adaptive response to irradiation revealed that interval of 4 hours between adaptive and resolving irradiation was needed. Adaptive response is of essential significance for radiation risk theory. 23 refs.; 3 tabs.

31973 (JINR-D–19-90-457, pp. 148-156) **Cytogenetics of radiation-induced adaptation in man lymphocytes.** Khandogina, E.K. (Vtoroj Moskovskij Gosudarstvennyj Meditsinskij Inst., Moscow (Russian Federation)); Mutovin, G.R.; Zvereva, S.V.; Zverev, D.O.; Antipov, A.V.; Akif'ev, A.P. Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1990. (In Russian). (CONF-9006421–: Workshop on DNA Repair on Mutagenesis Induced by Radiation, Dubna (USSR), 12-14 Jun 1990). In *Genetic effects of charged particles: Proceedings of conference.* 304p. Order Number DE93000803. Source: OSTI; NTIS (US Sales Only); INIS.

Adaptive response of radiation-induced chromosomal aberrations in man lymphocytes cultivated with PHA was studied. Adaptive response was proposed to be regarded as one of cellular conditioned phenomena of antimutagenic after-effect. Such interpretation of adaptive response permitted to select nonroutine research particularly in cells of patients with chromosomal instability syndrome. 11 refs.; 3 figs.

31974 (JINR-D–19-90-457, pp. 199-205) **To the problem of DNA-target for radiation-induced exchange chromosomal aberrations.** Aleksandrova, M.V.; Aleksandrov, I.L. Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1990. (In Russian). (CONF-9006421–: Workshop on DNA Repair on Mutagenesis Induced by Radiation, Dubna (USSR), 12-14 Jun 1990). In *Genetic effects of charged particles: Proceedings of conference.* 304p. Order Number DE93000803. Source: OSTI; NTIS (US Sales Only); INIS.

Peculiarities of hot points distribution of structural mutagenesis were reported. The peculiarities permitted to express hypothesis in accordance with which not moderate repeats but flanking unique genes and short poly - CA/GT tracts serve as target at DNA level for primary chromosomal injuries. Identification of hot and single points of chromosomal mutagenesis, occurrense of corresponding mutants and molecular-genetic approach to determination of nature of subsequences in these points draws nearer to solving of problems of mechanisms of radiation-induced aberrations. 22 refs.; 3 figs.

31975 (JINR-D–19-90-457, pp. 157-174) **Simulation and depression of repair in mutagenesis of Drosophila: adaptive response and heavy ion effect.** Fritz-Niggli, H. Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1990. (CONF-9006421–: Workshop on DNA Repair on Mutagenesis Induced by Radiation, Dubna (USSR), 12-14 Jun 1990). In *Genetic effects of charged particles: Proceedings of conference.* 304p. Order Number DE93000803. Source: OSTI; NTIS (US Sales Only); INIS.

There was shown the possibility of the enhancement of repair capacity by means of low doses. They also show the contrary, namely a possible attack of ionizing radiations on the often membrane dependent repair systems. It was shown that the membrane dependent repair system and/or energy system can be preferentially destroyed by high ZET-radiation. No differences in the sensitivity of different cell stages could be found. The effects in repair-deficient and repair-proficient cells are practically equal. 15 refs.; 14 figs.; 5 tabs.

31976 (JINR-D–19-90-457, pp. 175-187) **New type of radiation aftereffect: study of life span in generations of irradiated drosophila.** Izmajlov, D.M. (AN SSSR, Moscow (Russian Federation). Inst. Khimicheskoj Fiziki); Obukhova, L.K.; Okladnova, O.V.; Akif'ev, A.P. Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1990. (In Russian). (CONF-9006421–: Workshop on DNA Repair on Mutagenesis Induced by Radiation, Dubna (USSR), 12-14 Jun 1990). In *Genetic effects of charged particles: Proceedings of conference.* 304p. Order Number DE93000803. Source: OSTI; NTIS (US Sales Only); INIS.

Effect of radiation on viability of progeny of 2, 3 and more generations was studied in dynamics. Single irradiation changed rhythm of natural variations of control life span and affected viability of progeny of irradiated parents. Answer to the problem of certain generation in which differences with control were revealed, was of probable nature. Peculiarity of each repitition is unforecastable: such effects as inhibition and stimulation were observed in larly and delayed generations. Data on radiation effect can be stored for a long period of time realizing only in some postirradiation generations. 9 refs.; 4 figs.

31977 (JINR-D–19-90-457, pp. 188-198) **Photoreactivation of γ-induced premutations damages in Drosophila wild and phr$^-$ genotypes.** Aleksandrov, I.D.; Aleksandrova, M.V. Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1990. (In Russian). (CONF-9006421–: Workshop on DNA Repair on Mutagenesis Induced by Radiation, Dubna (USSR), 12-14 Jun 1990). In *Genetic effects of charged particles: Proceedings of conference.* 304p. Order Number DE93000803. Source: OSTI; NTIS (US Sales Only); INIS.

Modification of γ-induced point chromosomal mutations in wild (line D-32) and phr$^-$-genotype was studied. Expressed ambigyity for various genetic test-effects and dependence of its manifestation on activity of main repair cell systems functioning on the level of separate chromosomes and genome on the whole were shown to be peculiar to photoreactivation in Drosophila. 9 refs.; 2 figs.; 2 tabs.

31978 (JINR-D–19-90-457, pp. 220-229) **Modification of primary radiation injuries of biological systems by nitro compounds.** Kuropteva, Z.V. (AN SSSR, Moscow (Russian Federation). Inst. Khimicheskoj Fiziki); Shprints, Kh.; Zhumbaeva, T.T.; Kudryavtsev, M.E. Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1990. (In Russian). (CONF-9006421–: Workshop on DNA Repair on Mutagenesis Induced by Radiation, Dubna (USSR), 12-14 Jun 1990). In *Genetic effects of charged particles: Proceedings of conference.* 304p. Order Number DE93000803. Source: OSTI; NTIS (US Sales Only); INIS.

The presebted results revealed that nitrocompounds decreased level of primary radiation injuries of biomacromolecules. Different mechanisms of radiosensitization with nitrocompounds were supposed to occur. A mechanism was suggested in which the main factor in radiosensitizing effect turned out to be radiation-induced formation of intermediate products of incomplete reduction of nitro group. They intensify radiation cytogentic effect on the tumor. The products were shown to occur in further reduction of anion-radical nitrocompounds in tissues under irradiation. 9 refs.; 7 figs.; 1 tab.

31979 (JINR-D–19-90-457, pp. 293-304) **Evolutionary regularities formation of hierarchic system of genome reliability.** Sarapul'tsev, B.I.; Geras'kin, S.A. Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1990. (In Russian). (CONF-9006421–: Workshop on DNA Repair on Mutagenesis Induced by Radiation, Dubna (USSR), 12-14 Jun 1990). In *Genetic effects of charged particles: Proceedings of conference.* 304p. Order Number DE93000803. Source: OSTI; NTIS (US Sales Only); INIS.

Radiobiological data of targest world laboratories on ratio of radiosensitivity level and genome size were analyzed in various biological objects. Evolution regularities of formation of genome reliability lhierarchy were revealed. New mechanisms of reliability enhancement were shown to occur on the basis of former ones which practically unchanged were included in hierarchy of reliability providing of genetic systems of new baryotaxone (discrete group). 16 refs.; 1 fig.; 1 tab.

31980 (JINR-D–19-90-457, pp. 230-235) **AET and MEA affect on chromosomal aberrations occurrence in root meristems under γ-irradiation of plants within wide dose range from stimulatory up to superlethal doses.** Gudkov, I.N. (Ukrainskaya Sel'skokhozyajstvennaya Akademiya, Kiev (Ukraine)). Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1990. (In Russian). (CONF-9006421–: Workshop on DNA Repair on Mutagenesis Induced by Radiation, Dubna (USSR), 12-14 Jun 1990). In *Genetic effects of charged particles: Proceedings of conference.* 304p. Order Number DE93000803. Source: OSTI; NTIS (US Sales Only); INIS.

The experiments performed within range of minimal γ-radiation doses which permit to register radiation injuries testify to the absence of antiactinic effect of aet and mea. The doses were shown to induce occurrence of chromosomal aberrations in the cells. The fact stressed the necessity of careful handlung of low dose irradiation problem and also effect stimulating growth and development. 11 refs.; 4 figs.

31981 (JINR-D–19-90-457, pp. 206-219) **Comparative aspects of carcinogenic effects caused by protons, helium ions and γ-radiation.** Fedorenko, B.S. (Ministerstvo Zdravookhraneniya SSSR, Moscow (Russian Federation)); Parfenov, Yu.D. Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1990. (In Russian). (CONF-9006421–: Workshop on DNA Repair on Mutagenesis Induced by Radiation, Dubna (USSR), 12-14 Jun 1990). In *Genetic effects of charged particles: Proceedings of conference.* 304p. Order Number DE93000803. Source: OSTI; NTIS (US Sales Only); INIS.

Protons, γ-radiation and helium ions affect resulted in increase of rate of neoplasms of various localization and also in widening of spectra of occurring tumors. Calculation of RBE factors revealed more carcinogenic risk of accelerated charged particles of high energy as compared to electromagnetic radiation. 11 refs.; 1 fig.; 3 tabs.

31982 (JINR-E–19-91-334) **The effect of the anoxic radiosensitizing agent Tan on induction of revertants by γ-rays and helium ions in salmonella tester strains.** Basha, S.G.; Krasavin, E.A.; Kozubek, S. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Nuclear Problems. 1991. 14p. Order Number DE92644015. Source: OSTI; NTIS (US Sales Only); INIS.

The modification effect of the anoxic radiosensitizer TAN on the mutagenesis in various Salmonella tester strains after γ-ray and helium ion irradiation was studied. The oxygen enhancement ratios (OER) for all 3 strains on the lethal assay after γ-irradiation is approximately equal to 2. The induction of reversions in TA98 and TA100 does not modify under anoxia. The value of OER on mutagenic assay in TA102 equals 1.6. The OER after helium ion irradiation on the lethal and mutagenic assay was less than after γ-irradiation. The mutagenesis in 3 strains after irradiation under anoxia enhances by TAN. The value of TAN modification effects after γ-irradiation increases from 2.1±0.2 for TA102 to 5±0.4 for TA100. However, TAN influence on mutagenesis in TA100 after helium ion irradiation decreases to 3.1±0.3. We conclude that peculiarities of mutagenesis in various tester strain under anoxia with TAN can be explained by considering the nature of premutational DNA damages. 23 refs.; 2 figs.; 2 tabs.

31983 (KIYaI–90-42) **The disbalance of microelements in the blood of irradiated animals and its normalization with ceruloplasmin.** AN Ukrainskoj SSR, Kiev (Ukraine). Inst. Yadernykh Issledovanij. 1991. 20p. (In Russian). Order Number DE92001409. Source: OSTI; NTIS (US Sales Only); INIS.

This volume is a collection of papers concerning the ability of ceruloplasmin to modify the effect of radiation on blood cells. Selected papers are indexed separately for the database.

31984 (KIYaI–90-42, pp. 3-9) **The disturbance of micro element exchange in different blood of animals irradiated by different radiation sources.** Antonenko, S.G.; Petrina, L.G.; Druzhina, N.A.; Serkiz, Ya.I. AN Ukrainskoj SSR, Kiev (Ukraine). Inst. Yadernykh Issledovanij. 1991. (In Russian). In *The disbalance of microelements in the blood of irradiated animals and its normalization with ceruloplasmin.* 20p. Order Number DE92001409. Source: OSTI; NTIS (US Sales Only); INIS.

The dynamics of microelements in the blood of animals irradiated by various form of radiation was investigated. It was noted that neutron irradiation causes as compared with the X-ray one, the more fast and deep disturbance of micro element content of blood plasma. (author). 4 refs.; 5 figs.

31985 (KIYaI–90-42, pp. 10-19) **The role of ceruloplasmin in rise of resistance modes of organism to different radiation.** Antonenko, S.G.; Petrina, L.G.; Druzhina, N.A.; Serkiz, Ya.I. AN Ukrainskoj SSR, Kiev (Ukraine). Inst. Yadernykh Issledovanij. 1991. (In Russian). In *The disbalance of microelements in the blood of irradiated animals and its normalization with ceruloplasmin.* 20p. Order Number DE92001409. Source: OSTI; NTIS (US Sales Only); INIS.

The influence of low doses (0.5, 1.0 Gy) of X-ray radiation on activity of ceruloplasmin, transferrin, catalases of dog's blood and the content in it of the copper, iron was studied in the dynamics of ray influence. To study the radioprotective of ceruloplasmin the influence of neutron action with dose of 2.5 Gy and X-ray radiation (5.28 Gy) on activity of ceruloplasmin in blood serum of rats and mice was investigated. (author) 11 refs.; 7 figs.; 1 tab.

31986 (NEI-DK–900) **Plan for national nuclear emergency preparedness.** Civilforsvarsstyrelsen, Birkeroed (Denmark). Jun 1992 77p. (In Danish). Order Number DE92644131. Source: OSTI; NTIS; INIS.

The responsibility for Denmark's preparedness for nuclear emergencies lies with the Ministry of the Interior and the Civil Defense administration. The latter is particularly responsible for the presented plan which clarifies the organization and the measures to be taken in order tc protect the public where, in the event of such an emergency, it could be in danger of radiation from radioactive materials. The main specifications of the plan, the activation of which covers the whole country, are that daily monitoring should be carried out so that warnings of nuclear accidents can be immediately conveyed to the relevant parties and that immediate action can be taken. These actions should result in the best possible protection against nuclear radiation so that acute and chronic damage to the health of members of the public can be restricted. The public, and relevant authorities should be informed of the situation and it should be attempted to regulate the reactions of individuals and of the society in general in such a way that damage to health, or social and economical conditions, can be restricted as much as possible. Denmark has not itself any atomic power plants, but some are located in neighbour countries and there are other sources such as nuclear research reactors, passing nuclear-driven ships etc. The detailed plan also covers possible sources of radiation, the nature of related damage to health, international cooperation, legal aspects, and a very detailed description of the overall administration and of the responsibilities of the organizations involved. (AB).

31987 (ORNL/TM–11882, pp. 1-8) **Consistency of external dosimetry in epidemiologic studies of nuclear workers.** Fix, J.J. (Pacific Northwest Lab., Richland, WA (United States)); Gilbert, E.S. Oak Ridge National Lab., TN (United States). Oct 1991. (CONF-911004–: 3. conference on radiation protection and dosimetry, Orlando, FL (United States), 21-24 Oct 1991). In *Proceedings of the third conference on radiation protection and dosimetry.* 169p. Order Number DE92011502. Source: OSTI; NTIS.

Efforts are underway to pool data from existing epidemiologic studies of nuclear workers to obtain more precise estimates of radiation risk than would be possible from any single study. The International Agency for Research on Cancer (IARC) initiated an effort in 1989 to pool data from existing epidemiologic studies from the United States, Canada and the United Kingdom. More recently, the US Department of Energy has established the Comprehensive Epidemiologic Data Resource (CEDR), which will allow access to DOE epidemiologic research data by independent researchers. CEDR includes data on demographic variables, radiation exposure, and health effects from studies of workers at several DOE facilities. In the pooling of radiation exposure data, there is significant concern regarding consistency of personnel exposure records between the different studies. Dosimetry working groups have been formed to evaluate this issue for both the IARC and CEDR efforts. A protocol has been developed for the IARC study by representatives of the United States, United Kingdom and Canadian studies. Recently, a dosimetry working group has been formed to provide recommendations to CEDR regarding retrospective and prospective radiation dose records. Details of these efforts are addressed in this paper.

31988 (ORNL/TM–11882, pp. 81-83) **Optical study of radiation damage in A-SiO2 and problems of selective dosimetry of fast neutrons.** Abdukadyrova, I.Kh. Oak Ridge National Lab., TN (United States). Oct 1991. (CONF-911004–: 3. conference on radiation protection and dosimetry, Orlando, FL (United States), 21-24

Oct 1991). In *Proceedings of the third conference on radiation protection and dosimetry.* 169p. Order Number DE92011502. Source: OSTI; NTIS.

The present work deals with the optical study of the processes of radiation damage and structural phase transitions (PT) accumulation in α-SiO_2 monocrystals undergoing various influences of fast neutrons (F) and with the possibility of dosimetrical utilization of radiation-sensitive characteristics of the oxide. It has been found that when F grows within the limits of 10^{18}-10^{20} cm^{-2} the optical activity φ of the crystal changes; the influence of flux density, temperature, surroundings, mixed reactor irradiation components, and thickness change. The process of radiation damage of crystals by spectroscopic methods has been studied. In the course of the neutron irradiation of the α-SiO_2 structure transformation phenomena were studied by means of IR-spectrometry.

31989 (ORNL/TM-11882, pp. 99-108) **In vitro and in vivo bioassay applied to uranium trioxide.** Henge-Napoli, M.H. (IPSN/DPHD/SHI/Commissariat a l'Energie Atomique, Pierrelatte (France)); Ansoborlo, E.; Pujol, E.; Chalabreysse, J. Oak Ridge National Lab., TN (United States). Oct 1991. (CONF-911004-: 3. conference on radiation protection and dosimetry, Orlando, FL (United States), 21-24 Oct 1991). In *Proceedings of the third conference on radiation protection and dosimetry.* 169p. Order Number DE92011502. Source: OSTI; NTIS.

The aim of the present research is to suggest an in-vitro methodology, which can be used to characterize the physicochemical properties of any sample of UO3 under investigation and to validate the results by in-vivo experiments in order to categorize it within the transferability classes defined by the International Commission on Radiological Protection. Thus three in vitro tests, one chemical and two cellular, were developed to determine the solubility of uranium trioxide in various solvents or biological environments and to shed light on the dissolution mechanisms. The inhalations were performed on rats.

31990 (ORNL/TM-11882, pp. 109-116) **Experience with NQA-1 quality assurance standards applied to in vitro bioassay.** Bihl, D.E. (Pacific Northwest Lab., Richland, WA (United States)); MacLellan, J.A. Oak Ridge National Lab., TN (United States). Oct 1991. DOE Contract AC06-76RL01830. (CONF-911004-: 3. conference on radiation protection and dosimetry, Orlando, FL (United States), 21-24 Oct 1991). In *Proceedings of the third conference on radiation protection and dosimetry.* 169p. Order Number DE92011502. Source: OSTI; NTIS.

On June 1, 1990, the large (about 4,000 samples per year) excreta bioassay program at the Hanford Site ceased abruptly when the contract with the bioassay laboratory was terminated. An intense, high-priority effort was begun to replace the services on an interim basis until a new contract could be procured. Despite the urgency to get the excreta bioassay program going again, the Hanford Internal Dosimetry Program was constrained to use only labs that could meet stringent quality assurance (QA) requirements, even during the interim period. The QA requirements were based on NQA-1 with selected additions from the Environmental Protection Agency's QAMS 005/80 (EPA 1983) and the American Society for Testing and Materials' C 1009-83 (ASTM 1984). This constraint was driven both by legal reasons and by the Hanford Site contractors and workers not wanting the quality of the data to be sacrificed. Finding labs that could (1) handle the large throughput, (2) meet the technical requirements, and (3) pass the QA audit proved more difficult than first anticipated. This presentation focuses on the QA requirements that the labs had to meet and how those very broad requirements were applied specifically to excreta bioassay.

31991 (ORNL/TM-11882, pp. 131-140) **The radiation protection experience in KSNP of Taiwan during the past decade.** Jeng, K.T. (Taiwan Power Co., Taipei (Taiwan)). Oak Ridge National Lab., TN (United States). Oct 1991. (CONF-911004-: 3. conference on radiation protection and dosimetry, Orlando, FL (United States), 21-24 Oct 1991). In *Proceedings of the third conference on radiation protection and dosimetry.* 169p. Order Number DE92011502. Source: OSTI; NTIS.

This paper presents the radiation protection program in Kuosheng of Taiwan. Most doses are due to maintenance operations. The day-to-day efforts of the radiation protectors are to reduce occupational exposures for both external radiation exposure and internal contamination. Some salient works performed during the past decade by the radiation protectors are also addressed as feedback of radiation protection.

31992 (ORNL/TM-11882, pp. 141-145) **Accidental exposure with X-ray diffraction equipment.** Montanez, O. (Univ. de la Republica, Montevideo (Uruguay)); Blanco, D. Oak Ridge National Lab., TN (United States). Oct 1991. (CONF-911004-: 3. conference on radiation protection and dosimetry, Orlando, FL (United States), 21-24 Oct 1991). In *Proceedings of the third conference on radiation protection and dosimetry.* 169p. Order Number DE92011502. Source: OSTI; NTIS.

The shutter on one of the windows of an X-ray diffraction apparatus was accidentally left open, exposing the worker to the radiation. The worker was wearing a dosimeter film, which was processed immediately to evaluate the potential risk. It was determined that the exposure rate was 350 Roentgen/minute on the skin surface, with corrections being made for the worker's thin clothing. It was concluded that in spite of the worker receiving a relative high dose, it did not reach the threshold value for producing deterministic effects such as cataracts, erythema, and skin damage.

31993 (ORNL/TM-11882, pp. 163-169) **Determination of neutron dose from criticality accidents with bioassays for Na-24 and P-32.** Miller, L.F. (Univ. of Tennessee, Knoxville (United States)); Feng, Y.; Casson, W.; Thein, M.; Mei, G. Oak Ridge National Lab., TN (United States). Oct 1991. (CONF-911004-: 3. conference on radiation protection and dosimetry, Orlando, FL (United States), 21-24 Oct 1991). In *Proceedings of the third conference on radiation protection and dosimetry.* 169p. Order Number DE92011502. Source: OSTI; NTIS.

Procedures for bioassays of ^{24}Na and ^{32}P have been developed and are suitable for determining exposure from criticality accidents to as low as approximately 5 rads with standard gamma spectroscopy and liquid scintillation equipment. Induced activities of ^{24}Na associated with much lower exposures could be identified with a low background well counter. The use of a low background liquid scintillation counter and ashing larger quantities of hair could significantly reduce the cited value for ^{32}P. Methods for calculating the dose from the activity measurements are straightforward if the spectrum is specified, and an initial estimate of the spectrum can be improved if two or more dosimeter responses are available. Comparisons of experiments and calculations illustrate that the effect of backscatter into an external dosimeter is important. In addition, these measurements indicate that the spectrum used to determine the activation of sodium should include spectral changes associated with moderation by the body. In the event of a criticality accident, results from neutron transport calculations that mock up the accident environment would probably be available within one or two days. Thus, the initial estimate obtained from direct use of the bioassay and TLD data could be refined soon after an accident.

31994 (PNL-8236) **Hanford radiological protection support services annual report for 1991.** Lyon, M.; Bihl, D.E.; Fix, J.J.; Piper, R.K.; Froelich, T.J.; Leonwich, J.A.; Lynch, T.P. Pacific Northwest Lab., Richland, WA (United States). Jul 1992. 89p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. Order Number DE92019705. Source: OSTI; NTIS; INIS; GPO Dep.

Various Hanford sitewide radiation protection services provided by the Pacific Northwest Laboratory for the US Department of Energy, Richland Field Office and Hanford contractors are described in this annual report for calendar year 1991. These activities include internal dosimetry measurements and evaluations, in vivo measurements, external dosimetry measurements and evaluations, instrument calibration and evaluation, radiation source calibration, and radiological records keeping. For each of these activities, the routine program, program changes and enhancements, associated tasks, investigations and studies, and related publications, presentations, and other staff professional activities are discussed as applicable.

31995 (PNL-SA-20453) **The assessment of risks from exposure to low-levels of ionizing radiation.** Gilbert, E.S. Pacific Northwest Lab., Richland, WA (United States). Jun 1992. 32p.

Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-920617-11: Annual meeting of the Health Physics Society, Columbus, OH (United States), 21-25 Jun 1992). Order Number DE92019076. Source: OSTI; NTIS; INIS; GPO Dep.

This report is concerned with risk assessments for human populations receiving low level radiation doses; workers routinely exposed to radiation, Japanese victims of nuclear bombs, and the general public are all considered. Topics covered include risk estimates for cancer, mortality rates, risk estimates for nuclear site workers, and dosimetry.

31996 (PNL-SA-20943) **Electron migration in 5-bromouracil-substituted DNA and oligonucleotides in irradiated aqueous solutions.** Zimbrick, J.D.; Beach, C.M.; Muciarelli, A.G.; Sisk, E.C. Pacific Northwest Lab., Richland, WA (United States). Jun 1992. 3p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-9206228-1: Conference on pathways to radiation damage in DNA, Rochester, MI (United States), 14-18 Jun 1992). Order Number DE92019104. Source: OSTI; NTIS; GPO Dep.

Extended abstract.

Results of work by other investigators support the hypothesis that negative charge can migrate in DNA. Charge transfer between nucleotides and electron migration in solid state DNA has been demonstrated, with migration distances as great as 110 bases. Here we report a series of studies on aqueous solutions of DNA and oligonucleotides in which the radiolysis of 5-bromouracil (BU) substituted for thymine is used as a molecular probe to detect and measure the extent of electron migration. In studies using oligonucleotides, BU was substituted for thymine at specific locations in defined base sequences using automated phosphoramidite synthesis techniques. Using these single-stranded oligonucleotides with BU located at the 5 in. end of the sequence, electrons do not appear to migrate more than one base, if any.

31997 (PNL-SA-21038) **The role of cellular and molecular studies in evaluation of health effects from combined radiation and chemical exposures.** Brooks, A.L. (Pacific Northwest Lab., Richland, WA (United States)); Gilbert, E.S.; Kitchin, R.M.; Johnson, N.F. Pacific Northwest Lab., Richland, WA (United States). Jun 1992. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-9206229-1: 1992 conference on radiation and health, Hilton Head Island, SC (United States), 28 Jun - 2 jul 1992). Order Number DE92019086. Source: OSTI; NTIS; INIS; GPO Dep.

Additive models are currently used to predict risks following exposure to multiple agents or complex mixtures. Use of these models is questioned because different methods are used to derive risks for chemical and physical agents depending on the database used. Risks for the induction of cancer from radiation are based on large sets of human data, while standards are set for most chemical carcinogens using information derived from animal studies. However, it is not, from a scientific point of view, appropriate to add risks from physical and chemical agents to derive potential health impact from combined exposures. The range of safety factors built into the estimates, the large differences in the data sets used to evaluate and establish standards, and the differences in the basic philosophy for deriving risks for physical and chemical agents make the additive model unacceptable for estimating risks from combined exposures. To understand the potential health impacts from environmental exposure, it is important (1) to consider how risks were derived and (2) to determine if interactions exist between damage induced by the different agents to ensure that additive assumptions are valid. This presentation discusses a number of these safety factors for specific chemicals.

31998 (PNL-SA-21090) **Issues in risk assessment and modifications of the NRC health effects models.** Gilbert, E.S. Pacific Northwest Lab., Richland, WA (United States). Jun 1992. 21p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-9206229-2: 1992 conference on radiation and health, Hilton Head Island, SC (United States), 28 Jun - 2 jul 1992). Order Number DE92019129. Source: OSTI; NTIS; INIS; GPO Dep.

A report, Health Effects Models for Nuclear Power Plant Accident Consequence Analysis, was published by the US Nuclear Regulatory Commission, in 1985, and revised in 1989. These reports provided models for estimating health effects that would be expected to result from the radiation exposure received in a nuclear reactor accident. Separate models were given for early occurring effects, late somatic effects, and genetic effects; however, this paper addresses only late somatic effects, or the risk of cancer expected to occur in the lifetimes of exposed individuals. The 1989 revision was prepared prior to the publication of the BEIR V, 1988 UNSCEAR, and ICRP 60 reports. For this reason, an addendum was needed that would provide modified risk models that took into account these recent reports, and, more generally, any new evidence that had appeared since the 1989 publication. Of special importance was consideration of updated analyses of the Japanese A-bomb survivor study data based on revised DS86 dosimetry. The process of preparing the addendum required thorough review and evaluation of the models used by the BEIR V, UNSCEAR, and ICRP committees, and also required thorough consideration of the various decisions that must be made in any risk assessment effort. This paper emphasizes general issues and problems that arise in risk assessment, and also indicates areas where additional development and application of statistical methods may be fruitful.

31999 (PNWD-1975-HEDR) **Summary of the March 25-26, 1991 atmospheric model working meeting: Hanford Environmental Dose Reconstruction Project.** Ramsdell, J.V. Battelle Pacific Northwest Lab., Richland, WA (United States). Jul 1992. 47p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-9103253-Summ.: 1991 atmospheric model working meeting, Richland, WA (United States), 25-26 Mar 1991). Order Number DE92019950. Source: OSTI; NTIS; INIS; GPO Dep.

Atmospheric transport and diffusion calculations for the initial phase of the Hanford Environmental Dose Reconstruction (HEDR) Project were made using the MESOILT2 computer code (Ramsdell and Burk 1991). This code implemented a Lagrangian trajectory, puff dispersion model using components from other models designed primarily for regulatory applications. Uncertainty in the dispersion calculations was estimated following model calculations. The results of the atmospheric dispersion calculations were summarized in frequency distributions by location for use in preliminary dose calculations.

32000 (PNWD-1980-01-HEDR) **Hanford Environmental Dose Reconstruction Project: Monthly report, June 1992.** Finch, S.M.; McMakin, A.H. (comps.). Pacific Northwest Lab., Richland, WA (United States). Jun 1992. 61p. Sponsored by USDOE, Washington, DC (United States); Department of Health and Human Services, Washington, DC (United States). DOE Contract AC06-76RL01830. Order Number DE92018914. Source: OSTI; NTIS; INIS; GPO Dep.

The objective of the Hanford Environmental Dose Reconstruction Project is to estimate the radiation doses that individuals and populations could have received from nuclear operations at Hanford since 1944. The project is being managed and conducted by the Battelle Pacific Northwest Laboratories under contract with the Centers for Disease Control. The independent Technical Steering Panel (TSP) provides technical direction. The project is divided into the following technical tasks. These tasks correspond to the path radionuclides followed, from release to impact on humans (dose estimates): source terms; environmental transport; environmental monitoring data; demography, food consumption, and agriculture; environmental pathways and dose estimates.

32001 (PNWD-1992-HEDR) **Media information review, January-June 1992: Hanford Environmental Dose Reconstruction Project.** Harvey, G.L. Pacific Northwest Lab., Richland, WA (United States). Jul 1992. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. Order Number DE92018797. Source: OSTI; NTIS; GPO Dep.

The media information review, requested by the Communications Subcommittee of the Technical Steering Panel (TSP), provides a general indication of the media's areas of interests with regard to the Hanford Environmental Dose Reconstruction (HEDR) Project. This review briefly assesses 14 newspaper articles/advertisements collected between January and June 1992 by Battelle Pacific Northwest Laboratories (BNW). Articles that mention the project, activities closely associated with it, or members of the Panel were included in the analysis. The sources of the articles and announcements include most newspapers in the Northwest (dailies and weeklies) as collected and distributed to the US Department of Energy (DOE) and Hanford contractors by Westinghouse Hanford Company, Communications. National and international media coverage was provided during the review period by Burrelle's Press Clipping Service, New York, and A.T.P., New Jersey. The articles and advertisements represent those collected and judged applicable to issues and activities associated with the Technical Steering Panel and the Hanford Environmental dose Reconstruction Project. The collection is not considered inclusive of every written account of the subject, but as good a representative collection as reasonable. This review is unscientific and is not meant to display a technical analysis of the materials.

32002 (RFP–4590) **Using MACCS for on-site worker dose calculations.** Peterson, V.L. EG and G Rocky Flats, Inc., Golden, CO (United States). Rocky Flats Plant. [1992]. 16p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC34-90DP62349. (CONF-9208117–3: 1992 safety analysis workshop, Salt Lake City, UT (United States), 11-13 Aug 1992). Order Number DE92019359. Source: OSTI; NTIS; INIS; GPO Dep.

At the Rocky Flats Plant (RFP), many methods have been used in the past to calculate doses to persons exposed to atmospheric releases of radionuclides from postulated accidents. The EG&G Nuclear Safety Engineering standard is the MELCOR Accident Consequence Code System (MACCS), an NRC-sponsored code used for evaluating the consequences of accidents at nuclear power plants. This code was developed at the Sandia National Laboratories primarily for assessing consequences to individuals and populations outside of the plant boundaries. We are modifying MACCS for assessing consequences to on-site personnel. The modifications are being developed in sheltering, dose conversion factors, and building wake effects. The main emphasis of this report is on the sheltering modifications.

32003 (DOE/ER/61150–1, pp. 63) **In vivo studies of ethanol on prolactin and luteinizing hormone in rats.** Ho, C. (Veterans Administration Medical Center, Dayton, OH (United States)); Emanuele, N.V.; Kirsteins, L.; Lawrence, A.M. Massachusetts Univ. Medical Center, Worcester, MA (United States). [1991]. (CONF-9106140–: 7. international symposium on radiopharmacology, Boston, MA (United States), 3-6 Jun 1991). In *The seventh international symposium on radiopharmacology. Program and abstracts.* 102p. Order Number DE92015724. Source: OSTI; NTIS.

Alcohol is known to have profound effects on neurohormones, but only few studies reported the interaction of ethanol (ETOH) with prolactin (Prl) and luteinizing hormone (LH) in human subjects and experimental animals. The authors studied the effects of ETOH on hypothalamic and serum levels of Prl and LH in rats using radioimmunoassay techniques. In rats treated with ETOH, three subgroups were found regarding the amount of ETOH consumption: low (L) with 3.6 ml/kg/d, medium (M) 22 ml/kg/d, and high (H) 62 ml/kg/d. Hypothalamic Prl level in control was 0.88 ng/mg protein and was significantly increased in ETOH-treated groups to 1.61 (L), $P < 0.05$; 2.32 (M), $P < 0.01$; and 2.41 (H), $P < 0.001$. Hypothalamic LH level in controls was 5.5 ng/mg protein compared to 4.3 (L); 8.7 (M), $P < 0.05$; and 8.7 (H), $P < 0.05$. However, no significant difference in serum Prl and LH levels was found between control and ETOH-treated groups.

32004 (DOE/RA/50219–21-Pt.1) **Investigation of effects of 60-Hz electric and magnetic fields on operant and social behavior and on the neuroendocrine system of nonhuman primates: Quarterly report 37 - Part 1, Text.** Rhodes, J.W. Southwest Research Inst., San Antonio, TX (United States). 14 Jul 1992. 169p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-80RA50219. Order Number DE92040152. Source: OSTI; NTIS; GPO Dep.

The objective of this program is to investigate behavioral and neuroendocrine effects associated with exposure to 60-Hz electric and magnetic fields, using the baboon (Papio cynocephalus). Results from this program are used to estimate consequences of human exposure to the electric and magnetic fields associated with electric power transmission. Electric and magnetic field measurements for Experiment IIIA (Confirmatory), Experiment IV and Social Behavior portion of Experiment III are presented. The systems for the production and monitoring of the fields performed satisfactorily during Experiment IIIA and during all but the last part of Experiment IV. In Experiment III, two-way repeated analyses of variance revealed statistically significant Group (Exposed and Sham Exposed) and Period (Baseline. Exposure, and Post-Exposure) main effects. Two significant Period by Group interactions were also found. Seven of the ten behavioral categories showed a main effect of Period. Two-sample t-test comparisons of the two groups for each period indicated that performance rates in two behavioral categories (Stereotypy and Posture) were significantly lower in the Exposure Group. In general, the Exposed subjects exhibited a trend of progressively lower performance rates across the three periods. Specific accomplishments reported in this document were: measurement of electric and magnetic fields for Experiments IIIA and IV, completed analysis of the Social Behavioral data from Experiment III, and a detailed discussion of statistical methods employed on the Social Behavioral portion of Experiment III, and hematology data were collected and recorded for Operant and Social Behavioral subjects for Experiment IV.

32005 (DOE/RA/50219–21-Pt.2) **Investigation of effects of 60-Hz electric and magnetic fields on operant and social behavior and on the neuroendocrine system of nonhuman primates: Quarterly report 37 - Part 2, Appendices.** Rhodes, J.W. Southwest Research Inst., San Antonio, TX (United States). 14 Jul 1992. 233p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-80RA50219. Order Number DE92040153. This volume contains detailed experimental data to accompany quarterly report, dated July 14, 1992, by this group entitled "Investigation of Effects of 60-Hz Electric Fields on Operant and Social Behavior and on the Neuroendocrine System of Nonhuman Primates." This volume is a collection of Appendices which are entitled: Appendix A- Field Mapping Data Forms, Appendix B- Exposure Area (East Side) Electric Field Data, Appendix C- Exposure Area (East Side) Magnetic Field Data, Appendix D- Sham Area (West Side) Magnetic Field Data, Appendix E- Memoranda Concerning Field Onset During Experiment IV and the Crossover Experiment, Appendix F- Exposure Area (East Side) Electric Field Data, Appendix G- Exposure Area (East Side) Magnetic Field Data, Appendix H- Sham Area (west Side) Magnetic Field Data, Appendix I- Compiled Data and Anovas for Experiment III Social Data, Appendix J -Written Comments Provided by Statistician Dr. Robert Mason, and Appendix K- Reference Text Provided by Dr. Coelho.

32006 (PNL-SA–20368) **Cellular and molecular pathways of extremely-low-frequency electromagnetic field interactions with living systems.** Tenforde, T.S. Pacific Northwest Lab., Richland, WA (United States). Jun 1992. 16p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-920630–1: 1. world congress for electricity and magnetism in biology and medicine, Orlando, FL (United States), 14-29 Jun 1992). Order Number DE92019084. Source: OSTI; NTIS; GPO Dep.

There is growing evidence that environmental electric and magnetic fields in the extremely-low-frequency (ELF) band below 300 Hz can influence biological functions by mechanisms that are only poorly understood at the present time. The primary objectives of this paper are to review the physical properties of ELF fields, their interactions with living systems at the tissue, cellular, and subcellular levels, and the key role of cell membranes ;in the transduction of signals from imposed ELF fields. Topics of discussion include signal-to-noise ratios for single cells and cell aggregates, resonance phenomena involving a combination of static and ELF magnetic fields, and the possible influence of ELF fields on molecular signaling pathways that involve membrane receptors and cytoplasmic second messengers.

A technique has been developed to evaluate research laboratories according to risk, where risk is defined as the product of frequency and consequence. This technique was used to evaluate several laboratories at the Idaho National Engineering Laboratory under the direction of the Department of Energy, Idaho Field Office to assist in the risk management of the Science and Technology Department laboratories. With this technique, laboratories can be compared according to risk, and management can use the results to make cost effective decisions associated with the operation of the facility.

32008 (DOE/ER–0557T) **Subsurface Science Program Bibliography, 1985–1992.** USDOE Office of Energy Research, Washington, DC (United States). Office of Health and Environmental Research. Aug 1992. 55p. Sponsored by USDOE, Washington, DC (United States). Order Number DE92040642. Source: OSTI; NTIS; INIS; GPO Dep.

The Subsurface Science Program sponsors long-term basic research on (1) the fundamental physical, chemical, and biological mechanisms that control the reactivity, mobilization, stability, and transport of chemical mixtures in subsoils and ground water; (2) hydrogeology, including the hydraulic, microbiological, and geochemical properties of the vadose and saturated zones that control contaminant mobility and stability, including predictive modeling of coupled hydraulic-geochemical-microbial processes; and (3) the microbiology of deep sediments and ground water. TWs research, focused as it is on the natural subsurface environments that are most significantly affected by the more than 40 years of waste generation and disposal at DOE sites, is making important contributions to cleanup of DOE sites. Past DOE waste-disposal practices have resulted in subsurface contamination at DOE sites by unique combinations of radioactive materials and organic and inorganic chemicals (including heavy metals), which make site cleanup particularly difficult. The long- term (10- to 30-year) goal of the Subsurface Science Program is to provide a foundation of fundamental knowledge that can be used to reduce environmental risks and to provide a sound scientific basis for cost-effective cleanup strategies. The Subsurface Science Program is organized into nine interdisciplinary subprograms, or areas of basic research emphasis. The subprograms currently cover the areas of Co-Contaminant Chemistry, Colloids/Biocolloids, Multiphase Fluid Flow, Biodegradation/Microbial Physiology, Deep Microbiology, Coupled Processes, Field-Scale (Natural Heterogeneity and Scale), and Environmental Science Research Center.

32009 (ETDE/JP-mf–92562509, pp. 51-55) **Compilation of a gravity map on 1/500,000 Niigata sheet.** Komawazawa, M. (Geological Survey of Japan, Tsukuba (Japan)). Geological Survey of Japan, Tsukuba, Ibaraki (Japan). Jan 1992. 177p. (In Japanese). In *Interim report of the results of research and development in Sunshine Project in FY1990.: Researches on the technologies of the geothermal resource evaluatin of Japan.* Order Number DE92562509. Source: OSTI; NTIS (US Sales Only).

Compilation and preparation of a gravity map on the area of Niigata Sheet with scale 1/500,000, approximately 36-38 degrees north latitude, and 138-141 degrees east longitude were performed. The area of compilation is about 50,000 km^2, and the gravity measurement points used for the compilation are 52,000. The existing values of gravity data are not always calculated on the system based on the Japanese gravity standard net (JGSN75). And they contain the differences with the various types of gravimeters. Considering these facts, in order to transfer the existing measurement values to absolute values of gravity, re-measurents were carried out. By using these results, a correction formula was determined, and gravity values were re-calculated. Topographic correction was made by approximating the topography with an integrated body of supposed fan-shapes under the consideration of spherical effects, and Bouguer correction was also made by the partial sphere shell with the same size of 60 km arc length as the area of topographic correction. 10 refs., 3 figs.

32010 (ETDE/JP-mf–92562517, pp. 95-102) **Analysis and evaluation of resistivity data.: MT profiling of the southerm Tohoku district.** Ogawa, Y. (Geological Survey of Japan, Tsukuba (Japan)); Takakura, S.; Murata, Y. Geological Survey of Japan, Tsukuba, Ibaraki (Japan). Jan 1992. 133p. (In Japanese). In *Analysis and evaluation of data from the nationwide survey of geothermal exploration.* Order Number DE92562517. Source: OSTI; NTIS (US Sales Only).

In this report, resistivity data are analyzed and evaluated through MT profiling of the southern Tohoku district. Bandai area was selected as the model area. MT traverse line is about 150km long from Niigata plain to the Pacific coast via Aizu basin, Mt. Bandai, Koriyama, and Abukuma mountains. For the MT measurements, Phoenix V5-MT system was used. In addition to the usual MT measurement of five components, reference signals of two components in the horizontal magnetic field were measured at the points 100m to 300m away from the measuring points, and processed by the remote reference. The range of measuring frequency was between 320Hz and 0.0005Hz. Consequently, was revealed a presence of low resistivity zone in the deep part of crust in the Abukuma mountains covered by granites widely having high resistivity. It was also found that the upper surface of this low resistivity zone would correspond to the distribution of Curie point depth. 4 refs., 4 figs.

32014 (IS-T--1553) **The origin or the Archean Jardine iron formation-hosted lode gold deposit. Montana.** Ping, Liu. Ames Lab., IA (United States). 9 Jun 1992. 114p. Sponsored by USDOE, Washington, DC (United States); Department of the Interior, Washington, DC (United States); Geological Society of America, Boulder, CO (United States); Sigma Xi, the Scientific Research Society, New Haven, CT (United States). DOE Contract W-7405-ENG-82. Grant G1184119;Grant G1194119;Grant G1104119;Grant 4491-90. Order Number DE92018806. Source: OSTI; NTIS; GPO Dep.

While there is considerable controversy concerning the origin of greenstone-hosted lode gold deposits of Archean age, there is a general consensus that these deposits are epigenetic. By contrast, iron formation-hosted lode gold deposits of Archean or Proterozoic age are considered either epigenetic or syngenetic. At least three genetic models have been proposed for these gold deposits: a syngenetic model involving simultaneous deposition of gold and the iron formation; an epigenetic model involving a later introduction of gold, arsenic, and sulfur into the iron formation; and a multistage model involving primary concentration of gold during deposition of iron formation followed by remobilization and reconcentration of gold during later events. The Jardine district is one of only three Archean lode gold districts in the United States that have reserves of greater than 300,000 ounces of gold. The other two are the South Pass-Atlantic City district, Wyoming, and the Ropes mine, Michigan. The fact that two of the three districts are in the Wyoming province suggests that the province might be an Archean gold province similar to Archean provinces in Canada. Placer gold was discovered near Jardine in 1866, and gold quartz veins were mined in the 1880's at Mineral Hill. Exploration by the Jardine Joint Venture has concentrated on the Jardine area, including Crevasse Mountain, where minor lode gold mineralization occurs in quartz-biotite schists. In order to complement previous geochemical, mineralogical, petrological and structural studies, the present study has concentrated on fluid inclusion, stable isotope, and electron microprobe studies with the intention of determining: (1) the source of the ore-forming fluids and gold, and (2) the genetic relationship between gold mineralization and iron formation, alteration and metamorphism.

32015 (PNL-SA--21206) **Noninvasive probing of the ocean surface using laser-based nonlinear optical methods.** Korenowski, G.M. (Rensselaer Polytechnic Inst., Troy, NY (United States). Dept. of Chemistry); Frysinger, G.S.; Asher, W.E. Pacific Northwest Lab., Richland, WA (United States). Jun 1992. 15p. Sponsored by USDOE, Washington, DC (United States); Department of Defense, Washington, DC (United States). DOE Contract AC06-76RL01830. Grant N0001487K0239;Grant N0001490J1537. (CONF-9206260--2: 1. thematic conference on remote sensing for marine and coastal environments, New Orleans, LA (United States), 15-17 Jun 1992). Order Number DE92019431. Source: OSTI; NTIS; GPO Dep.

The laser-based nonlinear optical methods of second-harmonic generation and sum-frequency generation have been developed to study the chemical composition and concentration of natural surfactant materials present as slicks on the ocean surface. These noninvasive second-harmonic and sum-frequency generation methods produce signals which originate from only the top few molecular layers of the ocean surface, thereby producing an accurate picture of the ocean surface condition without interference from the bulk ocean chemistry. Chemical specificity of the methods is achieved by tuning the incident laser frequency to coincide with optical absorptions in the surface absorbed materials. We show that laser-based second-order nonlinear optical processes of SHG and SFG provide highly surface selective, noninvasive, in situ probes of the ocean surface. Although only preliminary experiments are reported in this paper, the probes provide important information about the nature of surfactants at the ocean surface and their behavior in response to dynamic forces at the sea/air interface. The future of the probes lies in their further development and use as in situ interfacial spectroscopic techniques.

32016 (SAND--91-2895C-Draft) **Recent advances in methods for measuring the dynamic response of geological materials to 100 GPa.** Furnish, M.D. Sandia National Labs., Albuquerque, NM (United States). [1991]. 19p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DP00789. (CONF-921162-2-Draft: Hypervelocity impact symposium, Austin, TX (United States), 17-20 Nov 1992). Order Number DE92016791. Source: OSTI; NTIS; GPO Dep.

Three classes of impact techniques have been employed for measuring equation-of-state properties for rocks, rock simulants and underdense materials such as natural snow. These techniques all use velocity interferometer diagnostics. One, employing a sample-in-projectile geometry, provides high-precision Hugoniot data and continuous release trajectories for dry or water-saturated materials. The majority of the present experiments have been performed with this geometry. The second, employing a sample-in-target geometry, provides loading path and Hugoniot data as well as limited release data. Materials studied by these two techniques have included a variety of tuffs, rhyolites, carbonates, grouts and epoxy-alumina mixture. The third method is well-suited for low-impedance materials, and employs ringdown wave interactions to give release information as well as Hugoniot and reshock states. This technique has been demonstrated for natural snow and several other distended materials. Uncertainties in the results from these techniques have been estimated by analyzing the effects of errors in observables and ancillary material properties.

32017 (UCRL-CR--109636, pp. 60, Paper 5) **Active tectonics of the south Caspian basin and surrounding regions.** Priestley, K. (Univ. of Nevada, Reno (United States)); Baker, C.; Jackson, J. Lawrence Livermore National Lab., CA (United States); Nevada Univ., Reno, NV (United States). Seismological Lab. Jan 1992. In *Analysis of seismic data from Kazakhastan, USSR. Final report.* 188p. Order Number DE92009515. Source: OSTI; NTIS.

The south Caspian Basin is a relatively aseismic block within the Alpine-Himalayan Belt, which is surrounded by zones of high seismicity. The authors have determined earthquake focal mechanisms and depths from P-wave first motion and P- and SH-waveform data for 16 earthquakes in the region surrounding the south Caspian Basin and used these to investigate the active tectonics of this region. Earthquakes beneath the Talesh Mountains of NW Iran and immediately off-shore in the SW Caspian Sea have shallow thrust mechanisms. The slip vectors of these events show that the continental crust of the Azarbaijan-Talesh block is moving east relative to both central Iran and the Arabian-Eurasia collision zone in eastern Turkey, and overthrusting the 'oceanic-like' crust of the south Caspian Basin. The combined effect of the overthrusting of the south Caspian Basin by the Talesh-Alborz mountains in the south, and by the continental crust of the northern Caspian Sea in the north will lead to the eventual destruction of the south Caspian Basin and the possible formation of an intermediate depth, dipping seismic zone within the continental interior, similar to that presently observed in the Hindu Kush.

32019 (CEA-CONF–10972) **Moment problem formulation of the Schroedinger equation.** Bessis, D. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Service de Physique Theorique); Handy, C.R. CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Service de Physique Theorique. 1992. 18p. (CONF-9201113–: International Mathematical Congress on Extrapolation and Rational Approximation, Tenerife (Spain), 13-17 Jan 1992). Order Number DE93701213. Source: OSTI; NTIS (US Sales Only); INIS.

We show that it is possible to project our in an exact manner to lowest eigenstate of Schroedinger equations. Taking into account the nodeless property of the lowest eigenstate one can replace the full Schroedinger equation by a moment problem whose measure is the eigenstate itself. The infinite set of positivity inequalities linked to this moment problem provides a framework which allows to compute sequences of upper and lower bounds to the unknown eigenvalue, and eigenfunction. The effective computation is based on deep convexity properties embedded in the set of hierarchical inequalities associated to this moment problem. The convexity allows to get the bounds through linear programming. We illustrate the method with simple one dimensional problems.

32020 (GANIL-P–91-18) **Quantum tunneling in the periodically driven SU(2) model.** Arvieu, R. (Grenoble-1 Univ., 38 (France). Inst. des Sciences Nucleaires); Kaminski, P.; Ploszajczak, M. Grand Accelerateur National d'Ions Lourds (GANIL), 14 - Caen (France). 1991. 16p. Order Number DE92570071. Source: OSTI; NTIS (US Sales Only); INIS.

The tunneling rate is investigated in the quantum and classical limits using an exactly soluble, periodically driven SU(2) model. The tunneling rate is obtained by solving the time-dependent Schroedinger equation and projecting the exact wave-function on the space of coherent states using the Husimi distribution. The oscillatory, coherent tunneling of the wave-function between two Hartree-Fock minima is observed. The driving plays an important role increasing the tunneling rate by orders of magnitude as compared to the semiclassical results. This is due to the dominant role of excited states in the driven quantum tunneling. (author) 15 refs., 4 figs.

32021 (IC–92/127) **Differential inclusions governed by convex and nonconvex perturbation of a sweeping process.** Truong Xuan Duc Ha. International Centre for Theoretical Physics, Trieste (Italy). Jul 1992. 18p. Order Number DE92644668. Source: OSTI; NTIS (US Sales Only); INIS.

In this paper we study the differential inclusion of the form -dx/dt is an element of $N_C(t)(x(t)) + F(t,x(t))$, t is an element of [0,1] x(0) x_0 is an element of C(0), where C(t) is a nonempty weakly closed moving subset of a separable Hilbert space H and $N_C(t)$ (x) is the Clarke's normal cone of C(t) at the point x in C(t) and the perturbation F is satisfies one of the following assumptions: (i) F is a uniformly continuous on the graph of C with nonempty compact values in H, (ii) F is globally measurable, upper semicontinuous on H with nonempty convex compact values in H. (author). 21 refs.

International Centre for Theoretical Physics, Trieste (Italy). Jul 1992. 15p. (LPTO–05/A/92.). Order Number DE92644670. Source: OSTI; NTIS (US Sales Only); INIS.

The aim of this paper is to describe classical mechanics in fiber bundle formalism. (author). 6 refs.

32024 (IPNO-TH–90-84) **Random matrix theories and chaotic dynamics.** Bohigas, O. (Paris-11 Univ., 91 - Orsay (France). Div. de Physique Theorique). Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1991. 116p. Order Number DE92570074. Source: OSTI; NTIS (US Sales Only); INIS.

A review of some of the main ideas, assumptions and results of the Wigner-Dyson type random matrix theories (RMT) which are relevant in the general context of 'Chaos and Quantum Physics' is presented. RMT are providing interesting and unexpected clues to connect classical dynamics with quantum phenomena. It is this aspect which will be emphasised and, concerning the main body of RMT, the author will restrict himself to a minimum. However, emphasis will be put on some generalizations of the 'canonical' random matrix ensembles that increase their flexibility, rendering the incorporation of relevant physical constraints possible. (R.P.) 112 refs., 35 figs., 5 tabs.

32025 (IPNO-TH–91-07) **Magnus approximation in the adiabatic picture.** Klarsfeld, S. (Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire); Oteo, J.A. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. Jan 1991. 21p. Order Number DE92570108. Source: OSTI; NTIS (US Sales Only); INIS.

A simple approximate nonperturbative method is described for treating time-dependent problems that works well in the intermediate regime far from both the sudden and the adiabatic limits. The method consists of applying the Magnus expansion after transforming to the adiabatic basis defined by the eigenstates of the instantaneous Hamiltonian. A few exactly soluble examples are considered in order to assess the domain of validity of the approximation. (author) 32 refs., 4 figs.

32026 (IPNO-TH–91-16) **Coherent state operators and n-point invariants for $U_q(sl(2))$.** Furlan, P. (Trieste Univ. (Italy). Ist. di Fisica Teorica); Stanev, Y.S.; Todorov, I.T. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1991. 22p. Order Number DE92570109. Source: OSTI; NTIS (US Sales Only); INIS.

A description of coherent state operators for SL(n,C)/H corresponding to the finite dimensional representations SU(n) is given. A complete set of n-point $U_q(sl(2))$ invariants are given (using a polynomial basis for the irreducible finite dimensional U_q-modules), that are regular for all non-zero values of the deformation parameter q. An integral expression for the (sesquilinear) inner product in an irreducible U_q-module is also presented. (K.A.) 22 refs.

32027 (IPNO-TH–91-17) **Semiclassical quantization of multidimensional systems.** Bogomolny, E.B. (AN SSSR, Chernogolovka (Russian Federation). Inst. Teoreticheskoj Fiziki). Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. Mar 1991. 112p. Order Number DE92570078. Source: OSTI; NTIS (US Sales Only); INIS.

The solution of a stationary k-dimensional Schroedinger equation $H\Psi=E\Psi$ in the semiclassical limit h → 0 is reduced to a discrete (k-1)-dimensional quantum map $\psi'=T\psi$ where the integral kernel (the matrix) T is built through classical trajectories corresponding to the classical Poincare map of the given problem. High-excited energy eigenvalues obey the quantization condition $\zeta_S(E)=0$ where the function $\zeta_S(E)=\det(1-T)$ coincides with the Selberg zeta function defined as the product over primitive periodic orbits. Different properties of the constructed Poincare map are discussed, in particular, the Riemann-Siegel relation for the dynamical zeta function. (author) 54 refs., 16 figs.

32028 (IPNO-TH–91-20) **Phase space approach to quantum dynamics.** Leboeuf, P. (Paris-11 Univ., 91 - Orsay (France). Div. de Physique Theorique). Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. Mar 1991. 20p. Order Number DE92570079. Source: OSTI; NTIS (US Sales Only); INIS.

The Schrodinger equation for the time propagation of states of a quantised two-dimensional spherical phase space is replaced by the dynamics of a system of N particles lying in phase space. This is done through factorization formulae of analytic function theory arising in coherent-state representation, the 'particles' being the zeros of the quantum state. For linear Hamiltonians, like a spin in a uniform magnetic field, the motion of the particles is classical. However, non-linear terms induce interactions between the particles. Their time propagation is studied and it is shown that, contrary to integrable systems, for chaotic maps they tend to fill, as their classical counterpart, the whole phase space. (author) 13 refs., 3 figs.

32029 (IPNO-TH--91-40) **Green function and scattering amplitudes in many dimensional space.** Fabre de la Ripelle, M. (Paris-11 Univ., 91 - Orsay (France). Div. de Physique Theorique). Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. Jun 1991. 23p. Order Number DE92570081. Source: OSTI; NTIS (US Sales Only); INIS.

Methods for solving scattering are studied in many dimensional space. Green function and scattering amplitudes are given in terms of the requested asymptotic behaviour of the wave function. The Born approximation and the optical theorem are derived in many dimensional space. Phase-shift analysis are developed for hypercentral potentials and for non-hypercentral potentials with the hyperspherical adiabatic approximation. (author) 16 refs., 3 figs.

32030 (JINR-E--2-91-97) **Relativity theory in (2+2)-space.** Strel'tsov, V.N. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of High Energy. 1991. 10p. Order Number DE92644671. Source: OSTI; NTIS (US Sales Only); INIS.

The formulation is discussed of relativity theory in noneuclidean space defined by the metric form $d\tau^2=dx^1dx^2+dx^3dx^4$. As is noted, in the particular case of (1+1) dimensions new variables $x^1=t-z$ and $x^2=t+z$ are quantities directly observed by the radar method which is used to define the concept of simultaneity and distance. The transition to them significantly simplifies (special) Lorentz transformations, the 'addition' theorem of velocities and so on. 11 refs.

Review of papers useful for understanding the ^{S}chroedinger equations of higher order· A bridge to mastering the nonlocal potentials. Different types of barriers: in coefficients at the derivatives of different order. Transformations of waves with one wave number into the waves with another wave number for fixed energy. Intensified tunnelling and violation of its symmetry. Crisis of nuclear physics? Appendix: Bessel functions J_α as bound states on the lattice α at the slope of the linear potential. 19 refs.; 6 figs.

32034 (JINR-R--4-91-254) **Algorithm for the solution of the Faddeev equation for a system of three identical spinless particles.** Belyaev, V.B. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation); Kochkin, O.I.; Kartavtsev, O.I. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Computing Techniques and Automation. 1991. 8p. (In Russian). Order Number DE92644678. Source: OSTI; NTIS (US Sales Only); INIS.

The homogeneous Faddeev equation for three identical spinless particles in numerically solved by means of Fortran program for finding the binding energy. The algorithm based on the finite-dimensional approximation of the differential operator. Estimation of errors of this method has been analyzed exactly. This task has a more methodical character, but can be applied to the solution of many specific problems of quantum mechanics for a few-body system. 14 refs.; 1 fig.; 1 tab.

32035 (JINR-R--4-91-261) **Algorithm of numerical calculations of differential Yakubovsky equations for the (1+3) scattering problem.** Belyaev, V.B. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation); Kochkin, V.I.; Kartavtsev, V.I. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Computing Techniques and Automation. 1991. 10p. (In Russian). Order Number DE92644679. Source: OSTI; NTIS (US Sales Only); INIS.

This work is the continuation of the numerical calculations of the Yakubovsky equations for the scattering problem for four spinless identical particles. More exact wave function for the bound complex of three particles is used here as distinct from the foregoing calculations. This wave function is calculated by means of FORTRAN program, which is made by the authors. The obtained scattering lengths are compared with the former calculations of the authors and with the available data. 9 refs.; 1 fig.; 1 tab.

32036 (JINR-R--11-91-100) **On a modification of a continuous analog of the Newton method.** Zhanlav, T.; Puzynin, I.V. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Computing Techniques and Automation. 1991. 10p. (In Russian). Order Number DE92644673. Source: OSTI; NTIS (US Sales Only); INIS.

The convergence conditions for the modification of the continuous analog of the Newton method are considered, and properties of the obtained iterative scheme are studied. A connection between the evolutionary Newtonian process and the continuous of R-process of Newton type is shown. 25 refs.

32037 (JINR-R--11-91-111) **Numerical method of solution of a boundary value problem for the coupled integro-differential equations (The Bethe-Salpeter equation).** Amirkhanov, I.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation); Puzynin, I.V.; Pervushin, V.N.; Zhuraev, O.M.; Sarikov, N.A. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Computing Techniques and Automation. 1991. 18p. (In Russian). Order Number DE93602474. Source: OSTI; NTIS (US Sales Only); INIS.

We proposed the algorithm for umerical solving a boundary value problem for two-quark bound states described by the Salpeter equation with potential $V_0r^2-\alpha_s/r$ which is coupled integro-differential equations depending on physical parameters m_0 and α_s. In this algorithm an iteration scheme of the continuous analogy of Newton's method, with corresponding choice of the iteration parameter, is realized. It is shown that using the continuation over parameter (m_0, α_s) method allows one to extend considerably a region of convergence of the iteration method. The solutions of the Salpeter equation for set of parameters m_0 and α_s are obtained, which reproduce the results are available (when $m_0=\alpha_s=0$). 17 refs.; 1 fig.; 2 tabs.

32038 (JINR-R--11-91-138) **A numerical solution of the two-center problem.** Zhanlav, T.; Pavlov, D.V.; Puzynin, I.V. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Computing Techniques and Automation. 1991. 16p. (In Russian). Order Number DE92644674. Source: OSTI; NTIS (US Sales Only); INIS.

Two different statements of the two-center boundary problem are suggested. The problems stated are considered as a nonlinear functional equation which is solved by the continuous analog of Newton's method, and its modification. The differential equations are approximated by the finite-difference method and the method of spline with an accuracy of the order of O(h^4), where h is the step of a uniform mesh. 26 refs.; 2 tabs.

32039 (JINR-R–17-91-271) **Generalization of Schroedinger equation to the Boltzmann phase space.** Gordelij, V.I. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics); Savel'ev, A.E. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Neutron Physics. 1991. 15p. (In Russian). Order Number DE92644675. Source: OSTI; NTIS (US Sales Only); INIS.

The Schroedinger equation brought into correspondence with the hypothesis of the particle interaction with vacuum has been generalized to the six-dimensional Boltzmann phase space. The Heizenberg principle of undeterminity has been connected with the mean-square values of the particle coordinates and momentum, that allows to conserve its physical sense to avoid the extremity of its primary wording. Three equations: the homogeneous Boltzmann equation of translation in its complete form, Hamilton-Yacobi equation and Schroedinger equation corresponding to the hypothesis of particle interaction with the vacuum follow from the generalized Schroedinger equation. It was found that Green function having a coherent view in Boltzmann space is the funfamental solution of the generalized Schroedinger equation. The general view of a microscopic wave function structure for the Bose-system has been suggested. 5 refs.

32040 (LAPP-TH–350/91) **A quasi-parafermionic realization of G_2 and $U_q(G_2)$.** Frappat, L. (Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules Elementaires); Sciarrino, A. Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules Elementaires. Sep 1991. 8p. Order Number DE93703833. Source: OSTI; NTIS (US Sales Only); INIS.

A construction of the exceptional Lie algebra G_2 and of the corresponding quantum algebra $U_q(G_2)$ is presented, using quasi-parafermionic creation and annihilation operators and their quantum analogue. As a by-product, a new realization of $U_q(A_2)$ is found. (author) 7 refs.

32041 (LA-UR–92-2536) **Measurement of atomic elastic constants by pulsed neutron powder diffraction.** Lawson, A.C.; Kwei, G.H.; Goldstone, J.A.; Cort, B.; Sheldon, R.I.; Foltyn, E.; Vaninetti, J.; Eash, D.T.; Martinez, R.J.; Archuleta, J.I. Los Alamos National Lab., NM (United States). [1992]. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9208129–1: 41. annual Denver x-ray conference, Denver, CO (United States), Aug 1992). Order Number DE92040389. Source: OSTI; NTIS; INIS; GPO Dep.

A technique for determining the atomic elastic constants from measurements of the Debye-Waller factors has been developed. The Debye-Waller factors are obtained by Rietveld refinement of time-of- flight neutron diffraction data and interpretation in terms of an atomic Debye-Waller temperature. The method is applicable to powders and to materials that must be encapsulated for safety or environmental reasons. Illustrations of the technique with applications to actinide metals, to metallic hydrides and to high-temperature superconductors are presented. (JDB)

32042 (LBL–27862) **Quantum theory and the emergence of patterns in the universe.** Stapp, H.P. Lawrence Berkeley Lab., CA (United States). Nov 1989. 14p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. (CONF-8910575–1: Patterns in the universe: an international symposium, Washington, DC (United States), 20-22 Oct 1989). Order Number DE92017548. Source: OSTI; NTIS; INIS; GPO Dep.

The topic of this symposium is the quest to discover, define, and interpret patterns in the universe. This quest has two parts. To discover and define these patterns is the task of science: this part of the quest is producing a copious flow of reliable information. To interpret or give meaning to these patterns is the task of natural philosophy: this part has not kept pace.

32043 (LYCEN–91-21) **On quantum groups and their potential use in mathematical chemistry.** Kibler, M. (Lyon-1 Univ., 69 - Villeurbanne (France). Inst. de Physique Nucleaire); Negadi, T. Lyon-1 Univ., 69 - Villeurbanne (France). Inst. de Physique Nucleaire. Jun 1991. 16p. (CONF-9106390–: 4. International conference on mathematical and computational chemistry, Bled (Yugoslavia), 3-7 Jun 1991). Order Number DE92570096. Source: OSTI; NTIS (US Sales Only); INIS. Submitted to Journal of Mathematical Chemistry.

The quantum algebra $su_q(2)$ is introduced as a deformation of the ordinary Lie algebra su(2). This is achieved in a simple way by making use of q-bosons. In connection with the quantum algebra $su_q(2)$, the q-analogues of the harmonic oscillator and the angular momentum are discussed. The q-analogues of the hydrogen atom are also introduced by means of a q-deformation of the Pauli equations and of the so-called Kustaanheimo-Stiefel transformation. (R.P.) 17 refs.

32044 (OUP–92-18) **Maximal reductions in the Baker-Hausdorff formula.** Kolsrud, M. Oslo Univ. (Norway). Fysisk Inst. May 1992. 29p. Order Number DE93602475. Source: OSTI; NTIS; INIS.

A preliminary expression for the Baker-Hausdorff formula is found up to ninth order, i.e. a series expansion of z in terms of multiple commutators, where $e^x=e^xe^y$ with x and y non-commuting, up to ninth degree in x,y. By means of complete sets of linear relations between multiple commutators, maximal reduction of the number of different multiple commutators in the series is obtained. 4 refs.

32045 (OUP–92-24) **Quantum theory and questions of reality and completeness.** Andaas, H.E.; Gjoetterud, O.K. Oslo Univ. (Norway). Fysisk Inst. Jul 1992. 18p. Order Number DE93602476. Source: OSTI; NTIS; INIS.

The authors discuss how the description of a two-particle spin-1/2 system prepared in a singlet state, a product state of definite total spin-projection and a specified mixture relates to the EPR conceptions of reality, locality and completeness and to Jarrets interpretations and representations of these concepts by probability statements. The importance of the state-preparation procedures and their relevance in this context is emphasized. The position of Bell's inequalities is also discussed. It is concluded that the inequalities have a limited power in deciding whether or not a system requires a quantal decription and that making a priori claims on reality and completeness is a too narrow scheme to describe quantal phenomena. 22 refs. 4 figs.

32046 (OUP–92-25) **Bell-type experiments and the concept of locally stochastic causality.** Andaas, H.E. Oslo Univ. (Norway). Fysisk Inst. Aug 1992. 21p. Order Number DE93602477. Source: OSTI; NTIS; INIS.

The concept of locally stochastic causality (LSC), related to the theory of local beables suggested by Bell, is introduced. It is argued that the experiments performed to verify the predictions of Bell's inequalities have merely been tests for the possibility of a description of nature in terms of joint probability distributions for the observables and that they do not provide sufficient results to sustain claims that theories based upon LSC have been falsified. 31 refs., 5 figs.

32047 (SLAC-PUB–5733-Rev.) **Second quantization in bit-string physics: Revision.** Noyes, H.P. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Aug 1992. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-9203181–1-Rev.: Workshop on harmonic oscillators, Baltimore, MD (United States), 25-28 Mar 1992). Order Number DE92019645. Source: OSTI; NTIS; INIS; GPO Dep.

Using a new fundamental theory based on bit-strings we derived a finite and discrete version of the solutions of the free one particle Dirac equation as segmented trajectories with steps of length h/mc along the forward and backward light cones executed at velocity ±c. Interpreting the statistical fluctuations which cause the bends in these segmented trajectories as emission and absorption of radiation, these solutions are analagous to a fermion propagator in a second quantized theory. This allows us to interpret the mass parameter in the step length as the physical mass of the free particle. The radiation in interaction with it has the usual harmonic oscillator structure of a second quantized theory. We sketch on these free particle masses can be generated gravitationally using the combinatorial hierarchy sequence $(3,10,137,2^{127}+136)$, and some of the predictive consequences.

32048 (CNIC–00400) **Study of electron-beam-pumped KrF laser kinetics and calculation of energy deposition.** Liu Hairui (Institute of Applied Physics and Computational Mathematics, Beijing, BJ (China)); Wang Zhengyan; Chen Dongquan. China Nuclear Information Centre, Beijing, BJ (China). May 1990. 7p. (In Chinese). (IAPCM–0015.). Order Number DE93602496. Source: OSTI; NTIS (US Sales Only); INIS.

The program of the electron-beam-pumped KrF laser kinetics has been developed. By using this program the relation of relaxation rate of upper laser level to the optimum output condition of the KrF laser is studied. It is expected that the laser output will be directly proportional to the relaxation rate under a given condition when the laser flux is near saturation. The numerical simulation showed that a rise (or drop) in pump rate is faster than that of the relaxation rate, the laser output rises (or drops) as well. The optimum condition of output is obtained. The pressure ($5 \approx 6$ atm*), the pump power and the Ar, Kr, F_2 mixture ratio are determined for the optimum condition. In order to study the energy deposition of the electron-beam-pumped KrF gas laser, the SANDYL and the ITS programs have been developed. The latter is the program with the axial magnetic field applied, while the former without any field. The energy depositions of two kinds of Ar/Kr/F_2 mixtures at various pressures of the electron-beam-pumped cylindrical KrF laser are calculated with the SANDYL program. The results show that under the same conditions, the energy deposition with the axial magnetic field applied is 3 times larger than that without any magnetic field. The energy depositions of two kinds of Ar/Kr/F_2.

Source: OSTI; NTIS; INIS; GPO Dep.

Equilibrium shapes and stability of linearly and nonlinearly polarizable drops floating freely between the two faces of a parallel-plate capacitor and subjected to an electric (magnetic) field are found by solving the Young-Laplace equation for surface shape and the Maxwell equations for field distribution. Accounting for nonlinear polarization at last brings theory and experiment into accord. Finite plate separation - as in any real experiment - is also found to play a big role.

Particle simulation using a nonlinear adiabatic electron response with two streaming ion species and nonlinear theory are used to study the collisionless thermalization of ion beams in a hot electron plasma. The slow beam or subsonic regime is investigated and the criterion for the transition from predominantly light ion to predominantly heavy ion heating is developed. Long-lived ion hole structures a-re observed in the final state.

32051 (JINR-R–11-91-68) **Evaluation of the high energy proton accumulation effect in the geomagnetic field by the mapping method.** Amirkhanov, I.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation); Zhidkov, E.P.; Il'in, I.V.; Il'in, V.D. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Computing Techniques and Automation. 1991. 14p. (In Russian). Order Number DE92643959. Source: OSTI; NTIS (US Sales Only); INIS.

Some features of the behaviour of the charged particles in the geomagnetic dipole trap are investigated in the dynamical chaos. Estimates of the retention time and the albedo proton accumulation effect have been made with help of numerical experiments with the Poincare mapping. The dependence of the effects on the adiabatic parameter value is shown. 17 refs.; 9 figs.

32052 (LA-UR–92-2125) **Geostationary-satellite beacon-receiver array for studies of ionospheric irregularities.** Carlos, R.C.; Jacobson, A.R.; Wu, Guanghui. Los Alamos National Lab., NM (United States). [1992]. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9207118–1: Beacon satellite symposium, Boston, MA (United States), 5-12 Jul 1992). Order Number DE92018979. Source: OSTI; NTIS; GPO Dep.

Ionospheric irregularities can be studied by various techniques. These include widely spaced Doppler sounders or ionosondes, Faraday rotation polarimetry, and two-frequency differential Doppler, and radio interferometry. With geostationary satellites, one usually uses Faraday rotation of the beacon signal to measure the ionospheric TEC. With a network of polarimeters, the horizontal wave parameters of Traveling Ionospheric Disturbances (TIDS) can be deduced, but the shortcoming of this technique is its poor sensitivity. This paper describes a geostationary-satellite beacon-receiver array at Los Alamos, New Mexico, which will be employed for the studying of ionospheric irregularities, especially the fine-scale TIDS.

32053 (LA-UR–92-2138) **Are some of the luminous high-latitude stars accretion-powered runaways?.** Leonard, P.J.T. (Los Alamos National Lab., NM (United States)); Hills, J.G.; Dewey, R.J. Los Alamos National Lab., NM (United States). [1992]. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9205226–3: Conference on luminous high-latitude stars, Boston, MA (United States), 28-30 May 1992). Order Number DE92018853. Source: OSTI; NTIS; INIS; GPO Dep.

It is well known that (1) runaway stars can be produced via supernova explosions in close binary systems, (2) most of such runaways should possess neutron star companions, and (3) neutron stars receive randomly oriented kicks of $\simeq 100$ to 200 km s^{-1} at birth. We find that this kick sometimes has the right amplitude and direction to make the neutron star fall into the runaway. Accretion onto a neutron star is a source of energy that is roughly an order of magnitude more mass efficient than nuclear burning. Thus, runaways containing neutron stars may live much longer than would normally be expected, which would allow them to travel great distances from their birthplaces during their lifetimes. Some of the early B-type stars far from the Galactic plane and the high-latitude F and G-type supergiants may be accretion-powered runaway stars.

32054 (LA-UR–92-2431) **The ALEXIS experiment: Current status and performance.** Bloch, J.J.; Priedhorsky, W.C.; Roussel-Dupre, D.; Edwards, B.C.; Smith, B.W. Los Alamos National Lab., NM (United States). [1992]. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-920792–18: SPIE international symposium on optical applied science and engineering, San Diego, CA (United States), 19-24 Jul 1992). Order Number DE92018601. Source: OSTI; NTIS; GPO Dep.

The Array of Low Energy X-ray Imaging Sensors (ALEXIS) experiment consists of a mini-satellite containing six wide angle EUV/ultrasoft X-ray telescopes. Its purpose is to map out the sky in three narrow (~5%) bandpasses around 66, 71, and 93 eV. The mission will be launched on the Pegasus Air Launched Vehicle in 1992 into a 400 nautical mile, high inclination orbit. The project is a collaborative effort between Los Alamos National Laboratory, Sandia National Laboratory, and the University of California-Berkeley Space Sciences Laboratory. The six telescopes are arranged in three pairs in such a manner that as the satellite spins twice a minute they scan the entire antisolar hemisphere. Each f/1 telescope consists of a spherical multilayer coated mirror with a spherical microchannel plate detector located at the prime focus and a thin aluminum or lexan/boron filter in front of the detector. The multilayer coatings determine the bandpasses of the telescopes. Each telescope has a field of view of 33 degrees. Unlike grazing incidence x-ray telescopes, the point spread function is uniform over the entire field of view with a FWHM of ~0.5 degrees determined by spherical aberration. In this paper we present the status of the project as of July 1992 as well as summary results from the pre-flight telescope calibration procedures.

32055 (LA-UR-92-2457) **Uniformity results of the multilayer mirrors used in the ALEXIS ultrasoft x-ray telescopes.** Roussel-Dupre, D.; Ameduri, F. Los Alamos National Lab., NM (United States). [1992]. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-920792–27: SPIE international symposium on optical applied science and engineering, San Diego, CA (United States), 19-24 Jul 1992). Order Number DE92018611. Source: OSTI; NTIS; GPO Dep.

The Array of Low Energy X-ray Imaging Sensors (ALEXIS) experiment, a mini-satellite containing six wide angle EUV/ultrasoft X-ray telescopes, is scheduled to be launched by a Pegasus rocket into a 425 nautical mile orbit in 1992 to observe cosmic X-rays. The telescopes utilize near normal incidence optics featuring a 12.8 cm diameter, 13.52 cm radius of curvature spherical mirror with a Mo/Si multilayer coating. The multilayer coatings are tuned to wavelengths of 133,171 and 186 Å. In addition, the top layers are comprised of a unique "wavetrap" designed to suppress the dominate background radiation at 304 Å from the geocorona. We present measured performance data for these mirrors including the two dimensional uniformity of the multilayer as a function of both radius and angular rotation, the measured reflectivity at the primary wavelength and the effectiveness of the "wavetrap". We also discuss problems encountered due to contamination and design changes that have been made to mitigate the effect of contamination.

32056 (LA-UR-92-2495) **Dynamical mass estimates in M13.** Leonard, P.J.T. (Los Alamos National Lab., NM (United States)); Richer, H.B.; Fahlman, G.G. Los Alamos National Lab., NM (United States). [1992]. 3p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9207116–1: Conference on dynamics of globular clusters, Berkeley, CA (United States), 15-17 Jul 1992). Order Number DE92018946. Source: OSTI; NTIS; INIS; GPO Dep.

We have used the proper motion data of Cudworth Monet to make mass estimates in the globular cluster M13 by solving the spherical Jeans equation. We find a mass inside a spherical shell centered on the cluster with a radius corresponding to 390 arcsec on the sky of 5.5 or 7.6 × 10^5 M$\odot$, depending on the adopted cluster distance. This large dynamical mass estimate together with the observed fact that the mass function of M13 is rising steeply at the low-mass end suggest that much of the cluster mass may be in the form of low-mass stars and brown dwarfs.

32057 (LA-UR-92-2545) **Neutron superfluid dynamics.** Epstein, R.I. (Los Alamos National Lab., NM (United States)); Link, B.; Baym, G. Los Alamos National Lab., NM (United States). [1992]. 9p. Sponsored by USDOE, Washington, DC (United States); National Science Foundation, Washington, DC (United States). DOE Contract W-7405-ENG-36. Grant DMR 91-22385. (CONF-9202117–4: Physics of isolated pulsars workshop, Taos, NM (United States), 23-28 Feb 1992). Order Number DE92040386. Source: OSTI; NTIS; GPO Dep.

Neutron superfluid dynamics and the coupling between the superfluid and the solid crust play important roles in the rotational, thermal and magnetic evolution of neutron stars. Here we describe the physical processes by which the neutron superfluid and the crust interact.

32058 (LA-UR-92-2547) **Ultraviolet studies of novae in the large magellanic cloud.** Starrfield, S. (Arizona State Univ., Tempe, AZ (United States). Dept. of Physics and Astronomy); Hauschildt, P.H.; Shore, S.N. Los Alamos National Lab., NM (United States). [1992]. 15p. Sponsored by USDOE, Washington, DC (United States); National Aeronautics and Space Administration, Washington, DC (United States); National Science Foundation, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9206268–1: New aspects of magellanic cloud research, Heidelburg (Germany), 15-17 Jun 1992). Order Number DE92040348. Source: OSTI; NTIS; GPO Dep.

We report on the ultraviolet observations of five novae in the LMC. They are LMC1988 #1, which was a CO nova similar to OS And; LMC 1988 #2, which was an ONeMg nova similar to Nova Her 1991; LMC 1990 #1, which was a very fast ONeMg nova similar to V693 CrA 1981; LMC 1990 #2, which was a recurrent nova similar to U Sco; and LMC 1991 which reached V~9.

32059 (LA-UR-92-2548) **Nucleosynthesis in nova explosions.** Starrfield, S. (Arizona State Univ., Tempe, AZ (United States). Dept. of Physics and Astronomy); Politano, M.; Truran, J.W.; Sparks, W.M.; Nofar, I.; Shaviv, G. Los Alamos National Lab., NM (United States). [1992]. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9206249–2: Origin & evolution of the elements conference, Paris (France), 22-25 Jun 1992). Order Number DE92040349. Source: OSTI; NTIS; GPO Dep.

This paper examines the consequences of accretion of hydrogen rich material onto ONeMg white dwarfs with masses of 1.0M$\odot$, 1.25M$\odot$, and 1.35M$\odot$. Our results demonstrate that novae produce both ^{22}Na and ^{26}Al in astrophysically interesting amounts. Hot hydrogen burning on ONeMg white dwarfs can produce as much as 2% of the ejected material as ^{26}Al and 3% as ^{22}Na. The largest amount of ^{22}Na is produced by the highest mass ONeMg white dwarfs nova systems which are predicted to be the fastest and most luminous of all types of novae. The largest amount of ^{26}Al is produced in the lowest mass white dwarfs, which according to our evolutionary calculations, should eject the largest amount of material. In support of this prediction, the observations of QU Vul, a slow ONeMg nova, indicate that it has ejected about 10^{-3}M$\odot$. However, such a large amount of ejected mass is inconsistent with a typical ONeMg white dwarf mass > 1.25M$\odot$.

32060 (LA-UR-92-2603) **^{22}Na and ^{26}Al production in nova outbursts.** Starrfield, S. (Arizona State Univ., Tempe, AZ (United States). Dept. of Physics and Astronomy); Politano, M.; Truran, J.W.; Sparks, W.M.; Nofar, I.; Shaviv, G. Los Alamos National Lab., NM (United States). [1992]. 17p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9108216–1: Advances in nuclear synthesis, Pasadena, CA (United States), 12-15 Aug 1991). Order Number DE92040344. Source: OSTI; NTIS; GPO Dep.

This paper examines the consequences of accretion of hydrogen rich material onto ONeMg white dwarfs with masses of 1.0M$_{\odot}$, 1.25M$_{\odot}$, and 1.35M$_{\odot}$. Our results demonstrate that novae produce both ^{22}Na and ^{26}Al in astrophysically interesting amounts. Hot hydrogen burning on ONeMg white dwarfs can produce as much as 2% of the ejected material as ^{26}Al and 3% as ^{22}Na. The largest amount of ^{22}Na is produced by the highest mass ONeMg white dwarfs nova systems which are predicted to be the fastest and most luminous of all types of novae. The largest amount of ^{26}Al is produced in the lowest mass white dwarfs, which according to our evolutionary calculations, should eject the largest amount of material. In support of this prediction, the observations of QU Vul, a slow ONeMg nova, indicate that it has ejected about 10^{-3}M$_{\odot}$. However, such a large amount of ejected mass is inconsistent with a typical ONeMg white dwarf mass > 1.25MG$_{\odot}$.

32061 (SAND-92-1501C) **Eddy current power dissipation at sharp corners.** Warne, L.K. Sandia National Labs., Albuquerque, NM (United States). [1992]. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DP00789. (CONF-9208116–1: Union Radio Science International (URSI) electromagnetic theory symposium, Sydney (Australia), 17 Aug 1992). Order Number DE92016890. Source: OSTI; NTIS; GPO Dep.

This paper develops corrections to the impedance per unit length when the conductor cross section includes sharp corners. The case of a right internal angle is treated in detail. Corrections are given for all values of the ratio of internal to external magnetic permeabilities. Both the real and imaginary parts of the corrections are determined. Application of the results to a conductor of square cross section is given. Higher order terms are developed and compared to a numerical solution.

32062 (SAND–92-8491) **Nonlinear stability of combustion-driven acoustic oscillations in resonance tubes.** Margolis, S.B. Sandia National Labs., Livermore, CA (United States). [1992]. 50p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DR00789. (CONF-921143–1: American Physical Society (APS) Division of Fluid Dynamics annual meeting, Tallahassee, FL (United States), 23-25 Nov 1992). Order Number DE92012153. Source: OSTI; NTIS; GPO Dep.

The leading-order fluid motions and frequencies in resonance tubes coupled to a combustion-driven flow source, such as occurs in various types of pulse combustors, are usually strongly related to those predicted by linear acoustics. However, in order to determine the amplitudes of the infinite number of classical acoustic modes predicted by linear theory along, and hence the complete solution, a nonlinear analysis is required. In the present work, we adopt a formal perturbation approach based on the smallness of the mean-flow Mach number which, as a consequence of solvability conditions at higher orders in the analysis, results in an infinately-coupled system of nonlinear evolution equations for the amplitudes of the linear acoustic modes. An analysis of these amplitude equations then shows that the combination of inertial processes that supply energy to the acoustic oscillations and those, such as viscosity, that dampen such motions, in conjunction with the manner in which the resonance tube is coupled to its flow source, provides an effective mode-selection mechanism that inhibits the growth of all but a few of the lower-frequency modes. For the common case of long resonance tubes, the lowest frequencies correspond to purely longitudinal modes, and we analyze in detail the solution behavior for a typical situation in which only the first of these has a positive linear growth rate. Basic truncation strategies for the infinitely-coupled amplitudes are discussed, and we demonstrate, based on analyses with both two and three modes, the stable bifurcation of an acoustic oscillation, or limit cycle, at a critical value of an appropriate bifurcation parameter. In addition, we show that the bifurcated solution branch has a turning point at a second critical value of the bifurcation parameter beyond which no stable bounded solutions exist.

32063 (TRITA-EPP–91-05) **Manifestations of electric currents in interstellar molecular clouds.** Carlqvist, P.; Gahm, G.F. Royal Inst. of Tech., Stockholm (Sweden). Dept. of Plasma Physics. Dec 1991. 20p. Order Number DE92643960. Source: OSTI; NTIS; INIS.

We draw the attention to filamentary structures in molecular clouds and point out the existence of subfilaments of sinusoidal shape and also of helix-like structures. For two dark clouds, the Lynds 204 complex and the Sandqvist 187-188 complex (The Norma 'sword') we make a detailed study of such shapes and in addition we find the possible existence of helices wound around the main filaments. All these features are highly reminiscent of morphologies encountered in solar ascending prominences and in experiments in plasma physics and suggest the existence of electric currents and magnetic fields in these clouds. On the basis of a generalization of the Bennett pinch model, we derive the magnitudes of the currents expected to flow in the filaments. Values of column densities, magnetic field strengths, and direction of the fields are derived from observations. Magnetic fields with both toroidal and axial components are considered. This study shows that axial currents of the order of a few times 10^{13}A are necessary for the clouds to be in equilibrium. The corresponding mean current densities are very small and even at the very low values of the fractional abundance of electrons encountered in these clouds, the mean electron velocities are of the order of 10^{-2}-10^{-5}m s^{-1}, much lower than the thermal velocities in the clouds. We suggest that helical structures may evolve as a result of various instabilities in the pinched clouds. We also call the attention to the kink intability in connection with the sinusoidal shapes. The existence of electromagnetically controlled features in the interstellar clouds can be tested by further observations. (au).

32064 (UCRL-JC–109552) **High frame-rate, large field wavefront sensor.** Avicola, K. (Lawrence Livermore National Lab., CA (United States)); Salmon, J.T.; Brase, J.; Waltjen, K.; Presta, R.; Balch, K.S. Lawrence Livermore National Lab., CA (United States). Mar 1992. 19p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9203139–2: Laser guide star adaptive optics workshop, Albuquerque, NM (United States), 10-12 Mar 1992). Order Number DE92019547. Source: OSTI; NTIS; GPO Dep.

A two-stage intensified 192 x 239 pixel imager developed by Eastman Kodak for motion analysis was used to construct a 1 kHz frame-rate Hartmann wavefront sensor. The sensor uses a monolithic array of lenslets with a focal length that is adjusted by an index fluid between the convex surface and an optical flat. The accuracy of the calculated centroid position, which is related to wavefront measurement accuracy, was obtained as a function of spot power and spot size. The sensor was then dynamically tested at a 1 kHz frame-rate with a 9 x 9 lenslet array and a fast steering mirror, which swept a plane wavefront across the wavefront sensor. An 8 cm diameter subaperture will provide a return signal (589 nm) level of about 1000 photons/ms using the AVLIS 1 kW laser (stretched pulse) as guide star source, which is sufficient to yield a wavefront measurement of better than γ/10 rms. If an area of 6 x 6 pixels per Hartmann spot were allocated, this wavefront sensor could support a 32 x 32, or 1024, element deformable mirror.

32065 (UCRL-MA–104861-Ver.2-3) **Temporal scattering and response software users' manual: Version 2.3.** McLeod, R.R. Lawrence Livermore National Lab., CA (United States). Jun 1992. 48p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE92040934. Source: OSTI; NTIS; GPO Dep.

This manual gives complete information on how to use the TSAR electromagnetic analysis software. Included are descriptions of input files, the details of how these files affect the problem, and output data specifications. What is not included is the theory of the finite-difference time-domain (FDTD) algorithm or details of the TSAR implementation of it. This manual assumes that readers are sufficiently familiar with FDTD that they only need the "how to" knowledge presented here. This is a reference manual rather than a tutorial manual. To help new users become familiar with the TSAR software, a set of example problems is included with the TSAR distribution.

This summary of our activities supported by our DOE contract DE-SC02-91ER40605 covers the period from 1 January to 31 January 1992. The major areas which consumed most of our time are D0 at the Fermilab collider, E800 at the Fermilab fixed target facility and SSC work on major detectors and in detector R&D. The research in these areas is discussed in this report.

We are participating in the experiments GEM at the SSC and MACRO at the Gran Sasso. After introducing GEM in chapter II, we present some results from GEM work we have done during the current contract period. Other significant GEM activities by our group such as participation in the evolution of GEM (as founding fathers), GEM proposal writing, and the design of GEM electronics for the Interpolating Pad Chambers for the Central Tracker are not included in this report.In chapter III we introduce MACRO and give a brief status report. Instead of a survey of our many ongoing contributions to MACRO, we choose in this technical report to concentrate on reporting results of some MACRO data analysis headed by our group (with important contributions by our collaborators, of course). This analysis, in chapter IV, concerns Point Sources.

32070 (CEA-CONF-10841) **Quantum fields at finite temperature and density.** Blaizot, J.P. CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Direction des Sciences de la Matiere. 1991. 56p. (CONF-9107236-: 4. Symposium on Nuclear Physics High Density and High Temperature Physics, Namwon (Korea, Republic of), 1-5 Jul 1991). Order Number DE92566702. Source: OSTI; NTIS (US Sales Only); INIS.

These lectures are an elementary introduction to standard many-body techniques applied to the study of quantum fields at finite temperature and density: perturbative expansion, linear response theory, quasiparticles and their interactions, etc... We emphasize the usefulness of the imaginary time formalism in a wide class of problems, as opposed to many recent approaches based on real time. Properties of elementary excitations in an ultrarelativistic plasma at high temperature or chemical potential are discussed, and recent progresses in the study of the quark-gluon plasma are briefly reviewed.

32071 (CRN-HE-90-04) **Twisted WZW superstring solutions.** Traubenberg, M.R. de; Savoy, C.A. Strasbourg-1 Univ., 67 (France). Centre de Recherches Nucleaires. 1990. 24p. Order Number DE93703447. Source: OSTI; NTIS (US Sales Only); INIS.

Superstring solutions on twisted group manifolds are investigated chiefly in the case of fermionizable Wess-Zumino-Witten models that yield space-time N=1 supersymmetry. Both outer and inner automorphisms are admitted as boundary conditions. The representations of the twisted current algebras are studied and their mass spectra perfectly match with their fermionic realizations. The supersymmetric solutions are characterized and classified. Especial ones are identified with Z_4 and Z_3 orbifolds via the equality of the fermion equivalences. (author) 20 refs., 2 tabs.

32072 (CRN-PHTH-91-16) **Variational principle in stochastic quantization and 1/N expansion.** Grandati, Y. (Metz Univ., 57 (France)); Berard, A.; Grange, P. Strasbourg-1 Univ., 67 (France). Centre de Recherches Nucleaires. 1991. 13p. Order Number DE92570100. Source: OSTI; NTIS (US Sales Only); INIS.

In stochastic quantization of O(N) scalar field theories, the variational scheme of Amundsen and Damgaard is analysed in the framework of a 1/N expansion. In the large-N limit the usual saddle point result is retrieved. Successive corrections in 1/N to the trial field are obtained analytically in a simple iterative process, with improved minimization at each step. A solvable toy model is treated explicitly showing very rapid convergence even for N = 3. For the O(N) ϕ^4 theory a minimization order by order in 1/N is shown to be the only feasible one in practice. (author) 11 refs., 2 figs.

Considering operators on a complex infinite dimensional Hilbert space H and denoting by T* a construction with $C_{.0}$ completely non-unitary part, it is proved that A_T is projection which commutes with T and $H^{(u)}{}_T = A_T H$. 3 refs.

32076 (IC-92/122) **Nonlinear realisations of $\omega_{1+\infty}$.** Sezgin, E. (International Centre for Theoretical Physics, Trieste (Italy)); Stelle, K.S. International Centre for Theoretical Physics, Trieste (Italy). Jun 1992. 20p. (Imperial/TP-90-91/21;CTP-TAMU-26/91.). Order Number DE92644721. Source: OSTI; NTIS (US Sales Only); INIS.

The nonlinear scalar-field realisation of $\omega_{1+\infty}$ symmetry in d = 2 dimensions is studied in analogy to the nonlinear realisation of d = 4 conformal symmetry SO(4,2). The $\omega_{1+\infty}$ realisation is derived from a coset-space construction in which the divisor group is generated by the non-negative modes of the Virasoro algebra, with subsequent application of an infinite set of covariant constraints. The initial doubly-infinite set of Goldstone fields arising in this construction is reduced by the covariant constraints to a singly-infinite set corresponding to the Cartan-subalgebra generators $v^{l}{}_{-(l+1)}$. We derive the transformation rules of this surviving set of fields, finding a triangular structure in which fields transform into themselves or into lower members of the set only. This triangular structure gives rise to finite-component subrealisations, including the standard one for a single scalar. We derive the Maurer-Cartan form and discuss the construction of invariant actions. (author). 12 refs, 3 figs.

32077 (IC-92/124) **Fourth-rank gravity and cosmology.** Marrakchi, A.L.; Tapia, V. International Centre for Theoretical Physics, Trieste (Italy). Jul 1992. 40p. Order Number DE92644722. Source: OSTI; NTIS (US Sales Only); INIS.

We consider the consequences of describing the metric properties of space-time through a quartic line element. The associated "metric" is a fourth-rank tensor $G_{\mu\upsilon\lambda\pi}$. In order to recover a Riemannian behaviour of the geometry it is necessary to have $G_{\mu\upsilon\lambda\pi} = g_{(\mu\upsilon}g_{\lambda\pi)}$. We construct a theory for the gravitational field based on the fourth-rank metric $G_{\mu\upsilon\lambda\pi}$. In the absence of matter the fourth-rank metric becomes separable and the theory coincides with General Relativity. In the presence of matter we can maintain Riemmanianicity, but now gravitation couples, as compared to General Relativity, in a different way to matter. We develop a simple cosmological model based on a FRW metric with matter described by a perfect fluid. For the present time the field equations are compatible with $k_{OBS} = O$ and $\Omega_{OBS} < 0.18$ and they imply $p/\rho < 0.038$ which corresponds to an almost pressureless perfect fluid. Therefore, the flatness problem is solved. However, our approach is valid only for $p/\rho<0.236$. Therefore, we consider an early universe in which the state equation of matter is $p/\rho=0.236$ rather than $p/p=1/3$. There is no violation of causality, no horizon problem, for $t>t_{CLAS}$ approx. $10^{20}t_{PLANCK}$ approx. 10^{-23}s. Our final and most important result is the fact that the entropy is an increasing function of time. When interpreted at the light of General Relativity the treatment is shown to be almost equivalent to that of the standard model of cosmology combined with the inflationary scenario. (author). 16 refs, 1 fig.

32078 (IC–92/126) **Beltrami parametrization and gauging of Virasoro and w-infinity algebras.** Tatar, L. (Cluj Univ., Cluj-Napoca (Romania). Dept. of Theoretical Physics). International Centre for Theoretical Physics, Trieste (Italy). Jul 1992. 20p. Order Number DE92644844. Source: OSTI; NTIS (US Sales Only); INIS.

The gauging of the Virasoro and w-infinity algebras are discussed from the point of view of BRST symmetry. Both algebras are realised as "Russian formulas" for the curvatures built from the generators of the Lie algebras and the corresponding gauge fields. The generalized curvatures are used to determine the gauge invariant Lagrangians as well as the anomaly structures of the conformal two dimensional theory and the w-gravity. (author). 21 refs.

32079 (IC–92/129) **Time-translation noninvariance of temporal gauge propagator.** Lim, S.C. International Centre for Theoretical Physics, Trieste (Italy). Jul 1992. 12p. Order Number DE92644723. Source: OSTI; NTIS (US Sales Only); INIS.

We show that within the framework of stochastic mechanics, the quantization of a free electromagnetic or Yang-Mills field in the temporal gauge can be consistently carried out. The resulting longitudinal component of the photon or gluon propagator is time-translation noninvariant. The exact form of the propagator depends on the additional boundary condition which fully fixes the temporal gauge. (author). 11 refs.

32080 (IC–92/131) **Compensating fields and anomalies in supergravity.** Shamir, Y. International Centre for Theoretical Physics, Trieste (Italy). Jul 1992. 24p. Order Number DE92644724. Source: OSTI; NTIS (US Sales Only); INIS.

We discuss the quantization of theories which are formulated using compensating fields. In particular, we discuss the relation between the components formulation and the superspace formulation of supergravity theories. The requirement that the compensating field can be eliminated at the quantum level gives rise to on-shell constraints on the operators of the theory. In some cases, the constraints turn out to be physically unacceptable. Using these considerations we show that new minimal supergravity is in general anomalous. (author). 17 refs.

32081 (IC–92/132) **General scalar-tensor theories for induced gravity inflation.** Boutaleb J, H. (Faculte des Sciences, Rabat (Morocco). Lab. de Physique Theorique); Marrakchi, A.L. International Centre for Theoretical Physics, Trieste (Italy). Jul 1992. 17p. Order Number DE93602505. Source: OSTI; NTIS (US Sales Only); INIS.

Some cosmological implications of a general scalar-tensor theory for induced gravity are discussed. The model exhibits a slow-rolling phase provided that the coupling function $\epsilon(\phi)$ varies slowly enough such that $\phi\, d\ln\epsilon(\phi)/d\phi$ much less than 2 during almost the inflationary epoch. It is then shown that, as in the ordinary induced gravity inflation, the chaotic scenario is more natural than the new scenario which proves to be even not self-consistent. The results are applied, for illustration, to a scalar-tensor theory of the Barker type. (author). 25 refs.

32082 (IC–92/133) **Nth roots of normal contractions.** Duggal, B.P. International Centre for Theoretical Physics, Trieste (Italy). Jul 1992. 14p. Order Number DE92644725. Source: OSTI; NTIS (US Sales Only); INIS.

Given a complex separable Hilbert space H and a contraction A on H such that A^n, $n\geq 2$ some integer, is normal it is shown that if the defect operator $\bar{D}_A = (1 - A^*A)^{1/2}$ is of the Hilbert-Schmidt class, then A is similar to a normal contraction, either A or A^2 is normal, and if A^2 is normal (but A is not) then there is a normal contraction N and a positive definite contraction P of trace class such that parallel to A - N parallel to 1 = 1/2 parallel to P + P parallel to 1 (where parallel to · parallel to 1 denotes the trace norm). If T is a compact contraction such that its characteristics function admits a scalar factor, if $T = A^n$ for some integer $n\geq 2$ and contraction A with simple eigen-values, and if both T and A satisfy a "reductive property", then A is a compact normal contraction. (author). 16 refs.

It is shown how starting from one-dimensional topological field theory on Schwarz type with holomorphic differential l-form and using Hilbert reduction one can construct one-dimensional conformal free scalar theory, which can realize infinite-dimensional conformal symmetries of $W_{1+\infty}$ type as well as sl(2) Kac-Moody algebra. (author). 15 refs.

32085 (IC–92/138) **Quantum group generalization of the heterotic QFT.** Matheus Valle, J.L. (International Centre for Theoretical Physics, Trieste (Italy)); Monteiro, M.A.R. International Centre for Theoretical Physics, Trieste (Italy). Jul 1992. 13p. Order Number DE92644727. Source: OSTI; NTIS (US Sales Only); INIS.

By the use of the generalized Grassmann algebra provided by Quantum Groups we introduce a new class of fields in two dimensions which have deformed commutation relations. We give the action involving this new class of fields and a bosonic scalar field and show that this action has a symmetry that resembles supersymmetry. We also construct the path-integral formalism for this new class of fields and compute the propagator for them in the context of the q-heterotic model. (author). 11 refs.

Moskovskij Gosudarstvennyj Univ., Moscow (Russian Federation). Nauchno-Issledovatel'skij Inst. Yadernoj Fiziki. 1991. 25p. (NIIYaF-MGU–91-11-215.). Order Number DE92644733. Source: OSTI; NTIS (US Sales Only); INIS.

Superharmonic gauge which is a nontrivial analog of the harmonic gauge in bosonic string theory is constructed for the fermionic superstrings. In contrast to the conformal gauge, the harmonic gauge in bosonic string and superharmonic gauge in superstring theory are shown to be free from previously discovered BRST anomaly (in critical dimension) in higher orders of string perturbation theory and thus provide the setup for consistent quantization of (super)string theory. Superharmonic gauge appears to be closely connected with the supersymmetric σ-model with the target space being also a supermanifold. 28 refs.

32099 (INP-MSU–91-15-219) **From the Weyl theory to a theory of locally anisotropic space-time.** Bogoslovsky, G.Yu. Moskovskij Gosudarstvennyj Univ., Moscow (Russian Federation). Nauchno-Issledovatel'skij Inst. Yadernoj Fiziki. 1991. 14p. (NIIYaF-MGU–91-15-219.). Order Number DE92644734. Source: OSTI; NTIS (US Sales Only); INIS.

It is shown that Weyl ideas, pertaining to local conformal invariance, find natural embodiment within the framework of a relativistic theory based on a viable Finslerian model of space-time. This is associated with the peculiar property of the conformal invariant Finslerian metric which describes a locally anisotropic space of events. The local conformal transformations of the Riemannian metric tensor leave invariant rest masses as well as all observables and thus appear as local gauge transformations. The corresponding Finslerian theory of gravitation turns out, as a result, to be an Abelian gauge theory. It satisfies the principle of correspondence with Einstein theory and predicts a number of nontrivial physical effects accessible for experimental test under laboratory conditions. 13 refs.

32100 (IPNO-TH--91-48) **Perturbative ground state energy of three anyons in a harmonic potential.** Khare, A. (Paris-11 Univ., 91 - Orsay (France). Div. de Physique Theorique); McCabe, J. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. Jun 1991. 13p. Order Number DE92570084. Source: OSTI; NTIS (US Sales Only); INIS.

The ground state energy of three anyons in a harmonic potential near fermionic statistics is calculated. The energy is given by: $E_0(\alpha)=\omega\{4+1.300\alpha^2+O(\alpha^3)\}$ where 4ω is the ground state energy of three fermions. It is compared with the energy of the exact eigenstate that interpolates to the ground state at $\alpha=1$ (bosonic statistics). There is a cross-over between ground states at $\alpha=.3$ where the two results coincide. (author) 13 refs., 1 fig.

32101 (JINR-E--2-90-587) **The system whose Hamiltonian is a time-dependent quadratic form in coordinates and momenta.** Chernikov, N.A. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1990. 19p. Order Number DE92644735. Source: OSTI; NTIS (US Sales Only); INIS.

The solution of the Schroedinger equation can be expressed algebraically in terms of the solution of the classical Hamiltonian equations in the case in which the Hamiltonian is a quadratic form in the coordinates x^a and momenta p_a and the coefficients of the form are arbitrary functions of the time t. The Fock representation is introduced for such a system. The results obtained are useful for the formulation of quantum field theory in an arbitrary space-time world. These results are also useful for consideration of the influence of classical gravitational and electromagnetic fields on quantized fields. 4 refs.

32102 (JINR-E--2-91-77) **On the energy-momentum tensors for field theories in spaces with affine connection and metric: Generalized Bianchi identities and different energy-momentum tensors.** Manoff, S. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1991. 16p. Order Number DE92644743. Source: OSTI; NTIS (US Sales Only); INIS.

Generalized covariant Bianchi type identities are obtained and investigated for Lagrangian densities, depending on co- and contravariant tensor fields and their first and second covariant derivatives in spaces with affine connection and metric (L_n-space). The notions of canonical, generalized canonical, symmetric and variational energy-momentum tensor are introduced and necessary and sufficient conditions for the existence of the symmetric energy-momentum tensor as a local conserved quantity are obtained. 19 refs.; 1 tab.

32103 (JINR-E--2-91-78) **On the energy-momentum tensors for field theories in spaces with affine connection and metric: Conditions for existence of energy-momentum tensors.** Manoff, S. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1991. 15p. Order Number DE92644744. Source: OSTI; NTIS (US Sales Only); INIS.

It is shown that the Euler-Lagrange equations for a material system in L_n space (in accordance with the case in U_n-space in contrast to the case in V_n space) cannot be used as sufficient conditions for the existence of the energy-momentum tensor as a local conserved quantity. The non-equivalent of Belinfante's and Hilbert's symmetric energy-momentum tensor for the general case is considered. It is shown from more general point of view that Einstein's tensor in the general relativity is equal to the symmetric energy-momentum tensor for the gravitational field. 16 refs.; 1 fig.

32104 (JINR-E--2-91-118) **A new exact solution to the classical equations of motion of the relativistic string with massive ends.** Barbashov, B.M.; Chervyakov, A.M. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1991. 14p. Order Number DE92644736. Source: OSTI; NTIS (US Sales Only); INIS.

The classical histories of the relativistic string with massive ends in space-time are examined in terms of geometric invariants of both the string world surface and world lines of the point masses at the string ends. In this formulation the string variables are completely defined by means of the constant curvatures and torsions of the endpoint trajectories which are subjected to a system of differential equations with a delayed arguments that incorporates retardation effects of the interaction of two point masses through the string. The well-known example of the rotating straight-line string with massive ends corresponds to a particular solution of this system for the constant torsions. A new exact solution for the periodic torsions of the world trajectories of the massive string ends is found. In this case the string coordinates are represented in terms of normal elliptic integrals and describe a more intricate motion including its transverse vibrations than rotation of a stretched string in a given plane. 17 refs.

32105 (JINR-E--2-91-157) **Parasupersymmetric spinning particle and topological gauge fields.** Korchemskij, G.P. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1991. 20p. Order Number DE92644737. Source: OSTI; NTIS (US Sales Only); INIS.

The first quantization of the D-dimensional relativistic spinning particle with the action invariant under reparametrizations and local worldline parasupersymmetric transformations is performed. The corresponding symmetry algebra is not of the Lie kind and is known as a polynomial algebra. It is found that the physical space of the massless particle is described by the strength tensors of abelian antisymmetric fields and topological gauge fields. 21 refs.

32106 (JINR-E--2-91-184) **Some problems of relativistic electrodynamics.** Strel'tsov, V.N. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of High Energy. 1991. 14p. Order Number DE92644738. Source: OSTI; NTIS (US Sales Only); INIS.

Some problems of electrodynamics are considered from the point of view of the radar formulation of relativity theory. This formulation is based on light or retarded distances, the increasing of longitudinal sizes of moving objects is its consequence (°longation formula). Based of Lienard-Wiechert potentials it is shown that in terms of retarded distances equipotential surfaces take the form of rotation ellipsoids, stretched in the direction of electric charge motion. The difficulty connected with the appearance of charge in a moving (neutral) current-carrying conductor is overcome. 23 refs.; 4 figs.

32107 (JINR-E--2-91-195) **Invariant structures in gauge theories and confinement.** Prokhorov, L.V. (Leningradskij Gosudarstvennyj Univ., Leningrad (Russian Federation)); Shabanov, S.V. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1991. 20p. Order Number DE92644739. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to Nucl. Phys., B.

The problem of finding all gauge invariants is considered in connection with the problem of confinement. Polylocal gauge tensors are introduced and studied. It is shown (both in physical and pure geometrical approaches) that the path-ordered exponent is the only fundamental bilocal gauge tensor, which means that any irreducible polylocal gauge tensor is built of P-exponents and local tensors (matter fields). The simplest invariant structures in electrodynamics, chromodynamics and a theory with the gauge group SU(2) are considered separately. 23 refs.; 2 figs.

32108 (JINR-E--2-91-260) **Quantum discrete gauge models with bosonic and fermionic degrees of freedom.** Filippov, A.T.; Gangopadhyay, D.; Isaev, A.P. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1991. 27p. Order Number DE92644846. Source: OSTI; NTIS (US Sales Only); INIS.

A general approach to quantizing discrete models (i.e. having a finite number of coordinates) with quadratic first-class constraints is presented in the framework of gauging linear canonical symmetries. It is also proposed how a natural superextension of matrix field theories (viz. orthosymplectic 'zero dimensional' matrix field theories) might emerge in this approach. 17 refs.

32109 (JINR-E--2-91-266) **Invariant structures and static forces in gauge theories.** Prokhorov, L.V. (Leningradskij Gosudarstvennyj Univ., Leningrad (Russian Federation)); Shabanov, S.V. Joint Inst. for Nuclear Research, Dubna (Russian Federation).

Lab. of Theoretical Physics. 1991. 12p. Order Number DE92644740. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to Phys. Lett., B.

The problem of finding all gauge invariants is considered in connection with confinement. It is shown that any gauge invariant may be built of the exponential line integrals (strings) and local gauge group tensors. The Coulomb field structure is analyzed from this point of view. In the pure SU(n) gauge theory (no matter), a potential of interacting static sources is found to be linearly rising with distance. 16 refs.; 1 fig.

Lab. of Nuclear Problems); Sergeenko, M.N. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Nuclear Problems. 1991. 12p. Order Number DE92644742. Source: OSTI; NTIS (US Sales Only); INIS.

The correlation of the average transverse momentum p_T abd the hadron multiplicity in the framework of the quark-gluon strings model (QGSM) is analyzed. It is shown that the successive division of the transverse momentum p_T between n-Pomeron showers results in the stronger dependence of p_T on the Pomeron number n and, consequently, on the multiplicity. The calculation results are compared with those obtained by the regular p_T division method. 26 refs.; 3 figs.

32112 (JINR-E-2-91-296) **Gottfried sum rule and mesonic exchanges in deuteron.** Kaptari, L.P. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics); Umnikov, A.Yu. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1991. 6p. Order Number DE92644718. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to Phys. Lett., B.

Recent NMC data on the experimental value of the Gottfried Sum are discussed. It is shown that the Gottfried Sum is sensitive to the nuclear structure corrections, viz. themesonic exchanges and binding effects. A new estimation of the Gottfried Sum is given. The obtained result is close to the quark-parton prediction of 1/3. 11 refs.; 2 figs.

32113 (LAPP-TH-292/90) **The algebraic versus geometric approach to quantum field theory.** Schroer, B. Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules Elementaires. Jun 1990. 25p. (CONF-9003264-: 4. Annecy meeting on theoretical physics: recent advanced in field theory, Annecy-le-Vieux (France), 5-9 Mar 1990). Order Number DE92570087. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to Nucl. Phys., B (NL).

Some recent developments in algebraic QFT are reviewed and confronted with results obtained by geometric methods. In particular a critical evaluation of the present status of the quantum symmetry discussion is given and the possible relation of the (Gepner-Witten) modularity in conformal QFT_2 and the Tomita modularity (existence of quantum reflections) of the algebraic approach is commented on. (author) 34 refs.

32114 (LAPP-TH-314/90) **Three-dimensional Ising Model and 2d-induced gravity.** Sedrakyan, A.G. Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules Elementaires. Oct 1990. 10p. Order Number DE92570121. Source: OSTI; NTIS (US Sales Only); INIS.

The three-dimensional Ising Model (3DIM) is investigated near the critical point. It will be shown, that in this limit in 3DIM there are induced gravitational modes, which are described by SL(2,R) current algebra with coupling constant K. The singularities of the two-dimensional surfaces, immersed in 3D euclidean space are taken into account. Their contribution to the partition function is equivalent to the contribution of the anyons with charge (K+4)/2 and conformal spin 1/2(1+[(K+4)/2]) included in the problem under consideration. The Knizhnik, Polyakov, Zamolodchikov equation for renormalized matter field coupling constant K changed and the solution D=3, K=0 is found. (author) 17 refs., 1 fig.

32115 (LAPP-TH-325/91) **Infrared singularities cancellation in reaction rates at finite temperature.** Altherr, T. Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules Elementaires. Jan 1991. 11p. Order Number DE92570089. Source: OSTI; NTIS (US Sales Only); INIS.

Using dispersion relations, the cancellation of infrared singularities is shown in reaction rates at finite temperature for topologies involving self-energy insertions at all orders of the perturbation theory. Feynman graphs are used exclusively, as in the Kinoshita approach. A crucial point is that the cancellation of mass singularities occurs within each topology. Other topologies and possible generalizations are also discussed. (R.P.) 13 refs., 2 figs.

32116 (LAPP-TH-326/91) **General construction of the Virasoro algebra from superalgebras.** Frappat, L.; Ragoucy, E.; Thuillier, F. Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules Elementaires. Feb 1991. 14p. Order Number DE92570090. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to Phys. Lett., B (NL).

The Master equations leading to a generalization of the Sugawara construction for superalgebras are given. The $OSp(1—2)_k$ case is worked out in detail. In particular, a new continuous one parameter solution is found at level k=4, which is related by K-conjugation to the continuous solution of $SU(2)_4$. This new solution for $OSp(1—2)_4$ corresponds to the sum of a theory of a free boson (c=1) and of a model of a non-unitary minimal series with c=-14/11. (author) 13 refs., 2 tabs.

32117 (LAPP-TH-328) **Finiteness of the topological models in the Landau gauge.** Maggiore, N. (European Physical Society, Geneva (Switzerland)); Sorella, S.P. Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules Elementaires. Mar 1991. 15p. Order Number DE92570122. Source: OSTI; NTIS (US Sales Only); INIS.

A general procedure for showing the perturbative finiteness of topological field theories is presented. The main tools of the investigation are the existence of a supersymmetric algebra and the choice of a Landau gauge for the gauge-fixing part of the action. First the on-shell supersymmetry is introduced, then the Slavnov identity and the off-shell supersymmetric algebra, finally the quantum extensions and the perturbative finiteness are studied. As an explicit example, the three-dimensional BF-system with a nonvanishing cosmological term is discussed in details. (K.A.) 15 refs., 2 tabs.

32118 (LAPP-TH-331/91) **A Polyakov action on Riemann surfaces.** Zucchini, R. Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules Elementaires. Feb 1991. 12p. Order Number DE92570123. Source: OSTI; NTIS (US Sales Only); INIS.

A calculation of the effective action for induced conformal gravity on higher genus Riemann surfaces is presented. Our expression, generalizing Polyakov's formula, depends holomorphically on the Beltrami and integrates the diffeomorphism anomaly. A solution of the conformal Ward identity on an arbitrary compact Riemann surfaces without boundary is presented, and its remarkable properties are studied. (K.A.) 16 refs., 2 figs.

32119 (LAPP-TH-337/91) **Linear supermultiplets and nonholomorphic gauge coupling functions.** Binetruy, P. (Paris-11 Univ., 91 - Orsay (France). Lab. de Physique Theorique et Hautes Energies); Grimm, R.; Girardi, G. Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules Elementaires. Apr 1991. 12p. Order Number DE92570124. Source: OSTI; NTIS (US Sales Only); INIS.

The general couplings of linear multiplets, including Chern-Simons forms, to chiral matter as well as to the standard supergravity-matter system are constructed. Insisting on a canonically normalised Einstein term in particular the appearance of non-holomorphic gauge couplings are discussed and duality transformations in full generality are performed. The implications of these structures for the effective description of sigma model anomalies are presented with and without coupling to supergravity, following recent proposals of Derendinger, Ferrara, Kounnas and Zwirner and of Cardoso and Ovrut. (author) 14 refs.

32120 (LAPP-TH-342/91) **Continuous realizations of extended conformal algebras.** Ragoucy, E. (Grenoble Univ., 74 Annecy (FR). Laboratoire Physique Theorique ENSLAPP). Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules Elementaires. Jun 1991. 14p. (CONF-9105372-: Topological and geometrical methods in field theory, Turku (Finland), 26 May - 1 jun 1991). Order Number DE92570094. Source: OSTI; NTIS (US Sales Only); INIS.

The Master equations for the Virasoro algebra constructed from a Kac-Moody algebra of a (basic) superalgebra, as well as the Master equations for the Super-Virasoro algebra built on a N=1 Super-Kac-Moody algebra realized in fermions, are presented. In both cases, a new solution depending on a free parameter (continuous solution) is found. The case of the W_3 algebra is also partially studied, and a new continuous solution is presented in the case of $SU(2)_2xSU(2)_2$. (author) 13 refs., 2 tabs.

32121 (LAPP-TH-344/91) **A comparison of the real-time and the imaginary-time formalisms of finite temperature field theory for 2,3, and 4-point Green's functions.** Aurenche, P.; Becherrawy, T. Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules Elementaires. Jul 1991. 22p. Order Number DE93703836. Source: OSTI; NTIS (US Sales Only); INIS.

The predictions of the real-time and the imaginary-time formalisms of Finite Temperature Field Theory is compared. Retarded and advanced amplitudes are constructed in the real-time formalism which are linear combinations of the usual time-ordered thermo-field dynamics amplitudes. These amplitudes can be easily compared to the various analytically continued amplitudes of the imaginary-time formalism. Explicit calculation of the 2,3 and 4-point Green's functions in ϕ^3 field theory is done in the one and two-loop approximations, and the compatibility of the two formalisms is shown. (author) 17 refs., 12 figs.

32122 (LA-UR-92-2471) **Baryon and lepton number violation in the standard model at high energy.** Mottola, E. Los Alamos National Lab., NM (United States). [1992]. 21p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9203176-1: Texas workshop on electroweak baryon number violation, New Haven, CT (United States), 18-21 Mar 1992). Order Number DE92018607. Source: OSTI; NTIS; INIS; GPO Dep.

The status of baryon and lepton number violation in the standard Weinberg-Salam electroweak theory at energies of order $M_W/\alpha W$ and higher is reviewed.

32123 (NIKHEF-H-92-05) **On Gupta-Bleuler quantization of systems with second-class constraints.** Kalau, Wolfgang. Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands). Sectie H. 10 Feb 1992. 18p. Order Number DE93602500. Source: OSTI; NTIS; INIS.

In this paper Hamiltonian systems with mixed first and second-class constraints are discussed. The authors prove that in a neighborhood of the constraint surface the complexified constraints can always be split into a holomorphic and an anti-holomorphic set, such that the holomorphic set can be implemented consistently on the ket-states of the corresponding quantum theory. The quantization is performed with BRSY-methods using a non-hermitian BRST-operator. As an example this method is used to quantize the 4-dimensional superparticle. (author). 25 refs.

32124 (NIKHEF-H-92-06) **Operator algebra from fusion rules II: implementing apparent singularities.** Fuchs, Juergen. Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands). Sectie H. Feb 1992. 31p. Order Number DE93602555. Source: OSTI; NTIS; INIS.

Classification of rational conformal field theories is essentially equivalent to classification of all possible four-point functions for the primary fields of the theories. An interesting set of parameters appearing in the latter classification is given by the number and the positions of so-called apparent singularities of the differential equations which are obeyed by the four-point functions. The subject of this paper is a detailed analysis of the role played by these parameters. In particular the restrictions imposed on them by general principles of two-dimensional conformal field theory are worked out, and the implications on the classification programme are discussed. (author). 46 refs.

32125 (NIKHEF-H-92-07) **The Mathai-Quillen formalism and topological field theory.** Blau, Matthias. Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands). Sectie H. 1992. 34p. (CONF-9202128-: Karpacz winter school on infinite dimensional geometry in physics, Karpacz (Poland), 17 Feb 1992). Order Number DE93602506. Source: OSTI; NTIS; INIS.

Notes of lectures given at the Karpacz Winter School on 'Infinite Dimensional Geometry in Physics' 17-27 february 1992.

These lecture notes give an introductory account of an approach to cohomological field theory due to Atiyah and Jeffrey which is based on the construction of Gaussian shaped Thom forms by Mathai and Quillen. Topics covered are: an explanation of regularized Euler numbers of infinite dimensional vector bundles; interpretation of supersymmetric quantum mechanics as the regularized Euler number of loop space; the Atiyah-Jeffrey interpretation of Donaldson theory; the construction of topological gauge theories from infinite dimensional vector bundles over space of connections. (author). 44 refs.

32126 (OUP-91-30) **General relativistic model of a spinning cosmic string.** Jensen, B.; Soleng, H.H. Oslo Univ. (Norway). Fysisk Inst. Nov 1991. 15p. Order Number DE92644745. Source: OSTI; NTIS; INIS.

The authors investigate the infinite, straight, rotating cosmic string within the framework of Einstein's General Theory of Relativity. A class of exact interior solutions is derived for which the source satisfies the weak and the dominant energy conditions. The interior metric is matched smoothly to the exterior vacuum. A subclass of these solutions has closed time-like curves both in the interior and the exterior geometry. 39 refs., 2 figs.

32127 (OUP-92-05) **Gravitational effect of the quantum vacuum outside a cosmic string.** Groen, Oe.; Soleng, H.H. Oslo Univ. (Norway). Fysisk Inst. Feb 1992. 15p. Order Number DE92644746. Source: OSTI; NTIS; INIS.

The conical geometry of static cylindrically symmetric cosmic string causes a non-vanishing contribution to the vacuum expectation value of the energy-momentum tensor of a quantum field. A model of a cosmic string is constructed, taking into account the gravitational field of this energy-density. The strongly curved interior of the string is modelled by a homogeneous fluid with vanishing tangential and radial stress. The integrated effect of vacuum polarization in this region is assumed to be accounted for by a singular layer with a traceless energy-momentum surface density at the surface of the string. The total Tolman mass of the system is positive, so the string produces an attractive gravitational field. 23 refs.

Superconducting Super Collider Lab., Dallas, TX (United States). 15 Jun 1992. 5p. Sponsored by USDOE, Washington, DC (United States); Feinberg School Fellowship (United States). DOE Contract AC35-89ER40486. (WIS-92/49/NOV-PH;CONF-9205228-1: 15. international Warsaw meeting on elementary particle physics, Kazimierz (Poland), 25-29 May 1992). Order Number DE92018101. Source: OSTI; NTIS; INIS; GPO Dep.

I propose that the large mass splitting between the top and bottom quarks is a signature of a class of superstring derived standard-like models. In these models only +2/3 charged quarks obtain a trilevel mass term. Mass terms for the lighter quarks and leptons are obtained from higher order terms in the superpotential. These models contain an "anomalous" U(1) gauge symmetry. Application of the Dine-Seiberg-Witten mechanism cancels the anomaly leaves a cubic level mass term only for the top quark.

This report is made of two largely independent parts. The first one deals with a finite temperature generalization of a mean field theory which we already used for a study of the QED vacuum stability against the 2-body coulomb interaction. We show that temperature does not change the stability conditions, and we study the solutions of the gap equations, especially in the high temperature domain. The second part is devoted to photons rather than electrons; we evaluate the first vacuum polarization corrections to the properties of back-body radiation, considering the Euler-Heisenberg photon-photon interaction within the mean-field approximation.

32130 (CNIC-00463) **Skyrmions of different types.** Li Tiezhong (Academia Sinica, Beijing, BJ (China). Inst. of High Energy Physics). China Nuclear Information Centre, Beijing, BJ (China). Dec 1990. 10p. (In Chinese). (BIHEP-0016.). Order Number DE93602581. Source: OSTI; NTIS (US Sales Only); INIS.

Two models of Skyrmions are suggested. In one of them the vector mesons $Z_\mu{}^0$ and $W_\mu{}^\pm$ may stabilize the Skyrmion formed by Higgs bosons. In the other, the Skyrmion is composed of three preons via the interaction with the Higgs bosons.

32131 (CRN-HE-91-05) **Quark-gluon plasma searches: today and tomorrow.** Geist, W.M. Strasbourg-1 Univ., 67 (France). Centre de Recherches Nucleaires. 1991. 26p. Order Number DE92570097. Source: OSTI; NTIS (US Sales Only); INIS.

Selected recent data from ion collisions at high energy are discussed in the frame-work of Quark-Gluon Plasma (QGP) searches. The purpose of these experiments is to measure the volume where a high temperature QGP may have been formed, determine its characteristic temperature, verify chemical equilibrium, establish deconfinement of this phase of matter, and/or find anything that differs from natural extrapolations from pp and pA collisions. Refined methods and new theoretical ideas for future experiments with heavier beams and/or at higher energies are briefly outlined. (G.P.) 49 refs., 28 figs.

We investigate the possibility of probing the flavour asymmetric nucleon sea in the LLA using ν and ν-bar projectiles. We find that for the NC case it is difficult to disentangle the effects of this flavour asymmetry from other contributions in a clean way. However, it is possible to obtain a sizeable effect for the CC case which can easily be isolated. Our conclusions are valid up to first order in α. (author). 23 refs.

The nucleon electric form factors are extracted from the solitonic solution of the Nambu-Jona-Lasinio model. To this end the model is solved self-consistently in the SU (2) sector with scalar coupling using the zero-boson and one-quark loop approximation. Squared radii, charge distributions and the Coulomb energy splitting are calculated as well. For constituent masses around M = 400 MeV one obtains good agreement with the experimental data. In all cases the vacuum polarization contributes to the observables to less then 15% except the neutron from factor that shows 30% sea quark contribution. (orig.).

Invited talk presented at the recontrse de Moriond meeting ^{H}igh Energy Hadronic Interactions' March 17-23, 1991.

This talk is meant to give an introduction into the main ideas of hadronization of QCD without almost any formalism. As it turns out, QCD bound states, constituent quark masses, and spontaneous chiral symmetry breaking may now be understood within a coherent framework. 7 refs.; 2 tabs.

32144 (JINR-E–2-91-262) **Parameters of low-energy physics, radial excitations of π, K, D mesons and QCD potential.** Sarikov, N.A. (AN Uzbekskoj SSR, Tashkent (Uzbekistan). Inst. Yadernoj Fiziki); Zhuraev, O.M.; Puzynin, I.V.; Pervushin, V.N.; Amirkhanov, I.V. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1991. 14p. Order Number DE93602603. Source: OSTI; NTIS (US Sales Only); INIS.

The parameters of low-energy physics of π, K, D mesons, masses of their radial excitations, wave functions, and leptonic decay constants $F_{\pi,\pi',K,K',D,D'}$ are calculated in terms of fundamental parameters of the QCD effective potential in the new relativistic potential model. 22 refs.; 10 figs.; 2 tabs.

32145 (JINR-E–11-91-108) **Newtonian iterative scheme for solving Schwinger-Dyson equation for a quark.** Amirkhanov, I.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation); Pervushin, V.N.; Puzynin, I.V.; Juraev, O.M.; Sarikov, N.A. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Computing Techniques and Automation. 1991. 15p. Order Number DE93602602. Source: OSTI; NTIS (US Sales Only); INIS.

Newtonian iterative scheme is used for solving the integro-differential Schwinger-Dyson equation for a quark. A suggested modification of this scheme reduces the solution of the input nonlinear boundary value problem to the solution of a sequaence of boundary value problems for linear differential equation. The program DYSON for IBM PC/AT computer is presented. 19 refs.; 3 figs.; 3 tabs.

32146 (JINR-R–2-91-140) **Calculation of the Higgs boson decay widths into boson pairs.** Bardin, D.Yu. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics); Vilenskij, B.M.; Khristova, P.Kh. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1991. 20p. (In Russian). Order Number DE92644874. Source: OSTI; NTIS (US Sales Only); INIS.

The decay widths of the Higgs boson into $\gamma\gamma$,$Z\gamma$,ZZ and W^+W^- are calculated on the one-loop level of the electroweak theory. Exact analytic formulae in terms of complex-valued dilogarithms are obtained. The dependence of the decay widths on the Higgs boson mass and on the top-quark mass are investigated. 12 refs.; 10 figs.; 1 tab.

32147 (LAL–91-61) **Testing the neutral Higgs sector of the M.S.S.M. with a 300-500 GeV e^+e^- collider.** Janot, P. Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire. Nov 1991. 26p. (CONF-9109422–: ICFA workshop, Hamburg (Germany), Sep 1991). Order Number DE92570115. Source: OSTI; NTIS (US Sales Only); INIS.

In order to search for the three neutral Higgs bosons h, H and A predicted by the Minimal Supersymmetric extension of the Standard Model (MSSM), an analysis of the final state $\tau^+\tau^-$qq-bar is developed. This single analysis would lead either to rule out the MSSM with a 300 to 500 GeV electron-positron collider if no signal were detected, or to find one scalar (and standard-like) Higgs boson via the production processes $e^+e^- \to hZ$ and/or $e^+e^- \to HZ$. The case of an 'invisible' Higgs boson is also treated and leads to the same conclusions. Furthermore, if $m_A \leq 200$ GeV/c^2, h, H and A would show up together thanks to the complementary processes $e^+e^- \to hA$ or HA, thus allowing to disentangle the MSSM Higgs sector from the Standard Model one. (author) 13 refs., 14 figs.

32148 (LAPP-TH–333/91) **Spontaneous decoupling of extended Gauge models.** Chiappinelli, A. (Trieste Univ. (Italy). Ist. di Fisica Teorica); Verzegnassi, C. Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules Elementaires. Apr 1991. 7p. Order Number DE92570092. Source: OSTI; NTIS (US Sales Only); INIS.

It is shown that for certain extended Gauge models the condition of vanishing of the Z-Z' mixing angle automatically reproduces the Georgi-Weinberg theorem. Thus, for such models, a simultaneous spontaneous decoupling both on Z resonance and in q^2=0 neutrino scattering might occur. (author) 10 refs.

32149 (LAPP-TH–339/91) **Exotic fermion mixing revisited.** Chiappinelli, A. (Trieste Univ. (Italy). Ist. di Fisica Teorica). Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules Elementaires. May 1991. 11p. Order Number DE92570093. Source: OSTI; NTIS (US Sales Only); INIS.

New limits on the exotic fermion mixing for charged particles of the 27 dimensional E_6 representation are obtained from last LEP 1 data taking into account the Z-Z' mixing and the recent evaluations on extra Higgs doublet effects on the Z partial widths. With the exception of a small window in the space of the neutral Higgses masses, the bound on the amount of exotic mixing is of the order of one per cent for the τ lepton and six per cent for the b quark at two Standard Deviations, improving noticeably the results of previous analyses. (author) 13 refs., 1 tab.

32150 (LAPP-TH–346/91) **Massive fermion dispersion relation at finite temperature.** Petitgirard, E. Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules Elementaires. Aug 1991. 11p. Order Number DE93703829. Source: OSTI; NTIS (US Sales Only); INIS.

The extension to the massive case of fermionic excitations in a QED/QCD plasma at high temperature is studied in detail. Calculations for light massive fermions are performed over the whole range of the three-momentum. Analytical and numerical results show that the collective mode is no longer significant for $m > gT$, whereas the usual particle excitation evolves rapidly to a free-particle state. (author) 9 refs., 2 figs.

No data at all exist for spin observables of the associated production reactions $pp \rightarrow pK^+Y$, from threshold up to 2.9 GeV.This energy domain is covered by the Saturne accelerator. The study of spin observables in strangeness production at Saturne will be done designing an exclusive experiment. The authors need a magnetic analysis of the reaction products and plan to identify the strangeness production reaction through the vertex cut method. The detectors chosen are described. In order to evaluate the performance of the proposed magnet and detector system, they have carried out Monte Carlo simulations of the reactions of interest with the code GEANT.

32155 (DOE/ER/03948–19) **Hadronic interactions at intermediate energies: Progress report, November 1987.** Mayes, B.W.; Hungerford, E.V. Texas Univ., Houston, TX (United States). Dept. of Physics. This report discusses research on the following topics: Hyperon physics at the AGS; strange dibaryons; muon decay into electron and gamma ray experiment; inelastic antineutron-proton scattering; antinucleon-nucleon interactions; and photoproduction of high transverse momentum jets. (LSP).

32156 (GANIL-P–91-23) **Finite-size scaling in the multiparticle production.** Bozek, P. (Grand Accelerateur National d'Ions Lourds (GANIL), 14 - Caen (France)); Ploszajczak, M. Grand Accelerateur National d'Ions Lourds (GANIL), 14 - Caen (France). 1991. 15p. Order Number DE92570105. Source: OSTI; NTIS (US Sales Only); INIS.

The finite-size scaling analysis of the scaled factorial moment data is proposed. This analysis allows to extract the scaling indices of the underlying higher-dimensional scale-invariant multiparticle distributions. Moreover, it exhibits the change of the effective scale involved in the dimensional projection with transverse momentum cuts applied to the data. (author) 15 refs., 2 figs.

32157 (IC–92/166) **Hadron nucleon interactions in view of a multi-peripheral model.** Hussein, M.T. International Centre for Theoretical Physics, Trieste (Italy). Jul 1992. 22p. Order Number DE92644960. Source: OSTI; NTIS (US Sales Only); INIS.

A dynamical phase space model is proposed to describe the hadron-hadron interactions at few GeV incident energy. A matrix element of a multiperipheral nature is used whose parameters are strongly correlated to the final state multiplicity. A simplified quark-quark interaction picture is considered to improve the results. The multiplicity distribution, the inclusive rapidity and longitudinal momentum distributions are reproduced for the π^-p interactions at 6.1 GeV. (author). 11 refs, 6 figs, 2 tabs.

32158 (IHEP-OTF–91-33) **Single t-quark production in high energy γe collisions.** Jikia, G.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (Russian Federation). Inst. Fiziki Vysokikh Ehnergij. 1991. 23p. Order Number DE92644947. Source: OSTI; NTIS (US Sales Only); INIS.

The explicit formulae for the cross sections of single t-quark production in γe collisions are presented. The contribution of the hadronic structure of the photon to the production cross sections is also calculated. Total t-quark and fourth generation b'-quark production rates and discuss theoretical uncertainties are evaluated. Assuming the luminosity of 10^{33} cm^{-2}s^{-1} in TeV energy range we estimate that the Cabibbo-Kobayashi-Maskawa matrix element V_{tb} can be probed to an accuracy of (3-5)%. 14 refs.; 12 figs.; 1 tab.

32159 (INIS-mf--14069, pp. 21-25) **Systematics of charm hadroproduction.** Vogt, R. (Gesellschaft fuer Schwerionenforschung (GSI), Darmstadt (Germany)). Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany); Technische Hochschule Darmstadt (Germany). Inst. fuer Kernphysik. 1992. 310p. (CONF-920195--: 20. international workshop on gross properties of nuclei and nuclear excitation: Heavy-ion collisions at intermediate and high energies, Hirschegg (Austria), 20-25 Jan 1992). In *Gross properties of nuclei and nuclear excitations. Proceedings.* Order Number DE92557961. Source: OSTI; NTIS (US Sales Only); INIS.

We discuss a two-component model of open charm produktion including high momentum transfer parton fusion and an intrinsic charm-component of the projectile. Our model has been applied to charm production in hadron-hadron and hadron-nucleus interactions. We also discuss applications to RHIC physics. (orig.).

In *Gross properties of nuclei and nuclear excitations. Proceedings.* Order Number DE92557961. Source: OSTI; NTIS (US Sales Only); INIS.

Based on the Friedberg-Lee model and its color dielectric extension we formulate a transport theory to describe the phase space evolution of nucleon-nucleon collisions on the quark level. The Vlasov equation is solved using two kinds of testparicles. (orig.).

32161 (INIS-mf--14069, pp. 249-253) **The meson contribution to semi-inclusive deep inelastic scattering with slow protons in the final state.** Korpa, C.L. (Kernfysisch Versneller Inst., Groningen (Netherlands)). Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany); Technische Hochschule Darmstadt (Germany). Inst. fuer Kernphysik. 1992. 310p. (CONF-920195--: 20. international workshop on gross properties of nuclei and nuclear excitation: Heavy-ion collisions at intermediate and high energies, Hirschegg (Austria), 20-25 Jan 1992). In *Gross properties of nuclei and nuclear excitations. Proceedings.* Order Number DE92557961. Source: OSTI; NTIS (US Sales Only); INIS.

We analyze the light-meson-exchange contribution to semi-inclusive leptoproduction on protons, with a slow nucleon in the final state. The dominant contribution at small Bjorken χ comes from pion exchange, through production of an intermediate delta which subsequently decays into a pion and a nucleon. This previously neglaceted contribution os necessary for obtaining reasonable agreement with recent experimental results. The contribution of the (somewhat controversial) scalar meson my be also significant. (orig.).

32162 (IPNO-DRE--91-22) **Meson physics at Saturne.** Siebert, R. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1991. 15p. (CONF-9105257--: Workshop on meson production, interaction and decay, Krakow (Poland), 6-11 May 1991). Order Number DE92570107. Source: OSTI; NTIS (US Sales Only); INIS.

After a short description of its facilities, the recent meson production program at the 'Laboratoire National Saturne' (LNS) is presented. Pion physics plays today a minor role, whereas η, η' and ϕ meson production is studied in various reactions. The main tools of the experiments are the four high quality magnetic spectrometers SPES I to IV, which have complementary properties. In addition, there exists a large solid angle multiparticle detector (DIOGENE), a non-magnetic 4π detector (ARCOLE) and two setups to detect γ_s, from π^0- and η-decays (SPESO and PINOT). First results of these experiments are presented together with theoretical aspects. Two new important meson programs are also presented. (R.P.) 13 refs., 7 figs., 2 tabs.

32163 (IPNO-TH--91-15) **On NN → ΔN transition: Bohr's rules and optimal formalism.** Auger, J.P. (Orleans Univ., 45 (FR). Lab. de Physique Corpusculaire, Atomique et Theorique); Lazard, C. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. Jun 1991. 36p. Order Number DE92570077. Source: OSTI; NTIS (US Sales Only); INIS.

The polarization structure of the NN → ΔN transition is presented in a very compact way using two kinds of formalisms. First, spin-space decomposition adapted for describing Bohr's rules is recalled. Second, optimal formalism is applied to the transition. It is adapted for taking into account Bohr's relations and explicitly developed in helicity and transversity frames. Tables of transformation are given which simply relate observables defined in different formalisms. (author) 18 refs., 2 figs., 7 tabs.

32164 (ISN--90-59) **Some open issues in nucleon-antinucleon interaction.** Richard, J.M. Grenoble-1 Univ., 38 (France). Inst. des Sciences Nucleaires. 5 Aug 1990. 5p. (CONF-900777--: Workshop on science at the KAON factory, Vancouver (Canada), 23-28 Jul 1990). Order Number DE93703451. Source: OSTI; NTIS (US Sales Only); INIS.

The conventional picture of the NN-bar (nucleon-antinucleon) interaction at low energy relies on the superposition of a long-range elastic potential and a short-range absorption. The meson-exchange model, which has been successful until the opening of LEAR, is not likely to survive the LEAR-ACOL era. Recent data on spin observables contradict the predictions of potential models. Annihilation and long-range forces are discussed as well as quasi-bound baryonium states. (K.A.) 11 refs.

32165 (JINR-E--2-91-183) **On the problem of enhancement of neutrino oscillation in matter.** Beshtoev, Kh.M. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Nuclear Problems. 1991. 7p. Order Number DE92644948. Source: OSTI; NTIS (US Sales Only); INIS.

The Wolfenstein mechanism of enhancement of neutrino oscillation in matter is discussed. The conclusion that it is ineffective is drawn. A mechanism of enhancement of neutrino oscillation based on the so-called 'horizontal' symmetry is proposed. 10 refs.; 1 tab.

32166 (JINR-R--2-91-211) **Analysis of $\pi\pi$ scattering with taking account of the KK-bar abd $\eta\eta$ thresholds.** Meshcheryakov, V.A. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics); Surovtsev, Yu.S.; Krupa, D. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1991. 11p. (In Russian). Order Number DE93602624. Source: OSTI; NTIS (US Sales Only); INIS.

A procedure to take into account the 8-sheeted structure of the Riemann surface of the 3-channel S matrix is proposed. The resonance representation on this surface is discussed. To define the resonance parameters, the experimental data on the isoscalar s-wave $\pi\pi$ scattering in the region including the KK-bar and $\eta\eta$ thresholds (0.7-1.6 GeV) are analyzed. 21 refs.; 2 figs.; 2 tabs.

32167 (JINR-R--4-91-163) **On a method of solution of dispersion equations for low-energy pion-pion scattering.** Zhuravlev, V.I. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1991. 8p. (In Russian). Order Number DE93602625. Source: OSTI; NTIS (US Sales Only); INIS.

An approach is proposed for solving dispersion equations for low-energy pion-pion scattering used earlier in solving equations of the static model. The approach is illustrated for an exactly solvable model. 4 refs.

32168 (LAL--91-45) **Search for new phenomena at LEP.** Richard, F. Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire. Oct 1991. 39p. Order Number DE92570111. Source: OSTI; NTIS (US Sales Only); INIS.

A systematic exploration of LEP data based on specific channels is presented. First the indirect method is described and a set of limits on new particles are given, obtained from the line shape measurements. Z^0 width measurements and forbidden Z^0 decays are discussed, involving pure photonic final states and flavour violating leptonic states. Then a systematic exploration of new phenomena based on leptonic final states is presented. Hadronic final states with missing energy or the presence of isolated particles, leptons or photons, will serve to set limits primarily in the Higgs sector. (K.A.) 34 refs., 16 figs., 8 tabs.

32169 (LAL–91-47) **Search for new particles in the SUSY framework.** Wormser, G. Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire. Oct 1991. 15p. Order Number DE92570112. Source: OSTI; NTIS (US Sales Only); INIS.

The search for new particles predicted by supersymmetric models performed by the four LEP experiments up to the summer 1991 are reported. The samples used in this report corresponds to a range of 100,000 to 300,000 hadronic Z^0 decays. No signal is observed in any of the channels: sqos. These negative results are interpreted in the framework of the MSSMuarks, sleptons, Higgs bosons (either neutral or charged) and neutralin model. The important implications of one-loop correction effects are discussed in some detail. (author) 21 refs., 4 figs., 4 tabs.

32170 (LAL–91-49) **Heavy flavour physics at LEP.** Roudeau, P. Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire. Nov 1991. 26p. (CONF-9107172–: 15. joint international lepton photon symposium at high energies and European Physical Society (EPS) conference on high energy, Geneva (Switzerland), 25 Jul - 1 aug 1991). Order Number DE92570114. Source: OSTI; NTIS (US Sales Only); INIS.

The hadronic Z^0 decays, registered at LEP in 1990 are studied. The forward-backward asymmetry of the b quark production and b lifetime measurements are discussed. B^0 and B^+ lifetime measurements using correlations between a lepton and a charm particle in semi-leptonic decays and evidence for Λ_b production are described. The partial width of Z^0 into bb-bar pairs was also measured. Concerning the charm sector, measurements on D^* production which give access to the c quark fragmentation function and to the partial width of the Z^0 into cc-bar pairs are described. Tau lifetime measurements are also discussed. (K.A.) 48 refs., 40 figs., 3 tabs.

32171 (LAL–91-62) **Higgs production in a photon-photon collider.** Richard, F. Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire. Nov 1991. 18p. (CONF-9106391–: Intermediate meeting of EE500 working groups, Annecy (France), 10-11 Jun 1991). Order Number DE92570116. Source: OSTI; NTIS (US Sales Only); INIS.

The basic considerations determining the parameters of a photon-photon collider are presented. The laser power needed for the various schemes envisaged for a 500 GeV e^+e^- collider is derived, and the predicted values for $\Gamma(H \rightarrow \gamma\gamma)$ are discussed, assuming a standard Higgs boson and the expected rates for the signal and for the channels contributing to the background. Some procedures to improve the signal to background ratio are indicated. As an illustrative example, the standard neutral Higgs boson production and detection are described. (R.P.) 13 refs., 11 figs., 1 tab.

32172 (LAL–91-63) **Prospects for supersymmetry discoveries at a 500 GeV e^+e^- collider.** Grivaz, J.F. Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire. Nov 1991. 34p. (CONF-9109374–: Workshop on physics and experiments with linear colliders, Saariselkae (Finland), Sep 1991). Order Number DE92570120. Source: OSTI; NTIS (US Sales Only); INIS.

The potential of a 500 GeV electron-positron collider for the discovery of supersymmetry is confirmed. If the MSSM is valid, at least one of its neutral Higgs bosons will be discovered. Moreover, the simultaneous observation of the three neutral Higgs bosons predicted by the model could decisively prove it. As shown by analyses incorporating realistic beam conditions and detector performances, charginos or scalar leptons can be discovered even close to the kinematic limit in spite of large standard model backgrounds, unless they are practically mass degenerate with the lightest neutralino. (author) 15 refs., 16 figs., 1 tab.

32173 (LAL–92-06) **Charm particle physics. A Tool-box for QCD.** Roudeau, P. Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire. Feb 1992. 22p. (In French). (CONF-9109424–: 1991 Gif Summer School, Palaiseau (France), Sep 1991). Order Number DE93701157. Source: OSTI; NTIS (US Sales Only); INIS.

The charm quark is the first of heavy quarks and it is produced in hard collisions by disturbing mechanisms. The author shows that the charm particles can be used as probes in the study of QCD perturbation theory, that the study of charm hadron decays can be a good laboratory for studying the contribution of strong interactions to these processes and explains that the charm quark is the only one heavy quark having an electric charge of 2/3 whose the properties can be studied in detail: study of D -antiD oscillations, CP violation, rare mode decays of charm particles.

32174 (LAL–92-07) **Beauty physics-CKM matrix.** Wormser, G. Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire. Feb 1992. 39p. (In French). (CONF-9109424–: 1991 Gif Summer School, Palaiseau (France), Sep 1991). Order Number DE93701158. Source: OSTI; NTIS (US Sales Only); INIS.

This lesson is composed of 3 parts:-Introduction to Cabbibo-Kobayashi-Maskawa matrix and rapid view of beauty particle decays -Measurement of V_{bc} and V_{bu} of this matrix -Measurement of V_{td} and V_{ts}, the oscillation study in B-antiB system.

32175 (LAL–92-15) **Study of Tau lepton decays with ALEPH detector at LEP.** Zhang, Z. Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire. Apr 1992. 201p. (In French, English). Order Number DE93701159. Source: OSTI; NTIS (US Sales Only); INIS.

Using the data accumulated at LEP in 1989 and 1990 with the ALEPH detector, the inclusive and exclusive branching ratios of the τ lepton have been measured assuming lepton universality in Z^0 decays. The inclusive branching fractions for the τ decay into one, three, and five charged particles have been determined to be (85.45±0.97)%, (14.35±0.48)%, and (0.10± 0.05)% respectively, in agreement with the world averages. New undetected decay modes are determined to have a branching fraction of less than 2.1% at 95% CL. The measured branching ratios for quasi-exclusive channels are slightly larger than, but consistent with the world averages, except for the modes $\tau \rightarrow 3$ hadrons$+\nu_\tau$ and $\tau \rightarrow$hadron$+2\pi^0\nu_\tau$, which are significantly larger. These latter branching ratios have been found to be (9.5±0.7)% and (10.2±1.1)%, respectively. The sum of all the measured quasi-exclusive branching ratios is (100.4±1.8)%. A fully exclusive analysis of modes with neutral pions shows no evidence for new photonic decay modes with a branching fraction limit of 3.4% at 95% CL.

32176 (LAPP-EXP–91-09) **Experimental study of charmed baryons at SuperLEAR.** Poulet, M. Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules Elementaires. 1991. 7p. (CONF-9110318–: SuperLEAR workshop, Zurich (Switzerland), 9-12 Oct 1991). Order Number DE93703731. Source: OSTI; NTIS (US Sales Only); INIS.

The possibility to study and detect the charmed baryons at SuperLEAR was examined. It was found that it is possible only if the search is restricted to the single charm baryons Λ_c, Σ_c, Ξ_c. The experimental approach requires high luminosity and some complexity of the detection system. It has to be considered as a second generation jet target experiment in a range of p-bar momentum from 8 to 15 GeV/c. (R.P.) 12 refs., 2 figs.

32177 (LNS-PH–91-15) **η,$K_L \rightarrow \pi^+\pi^-\gamma$ as tests of chiral models.** Picciotto, C. (Laboratoire National Saturne - Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). Laboratoire National Saturne - Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). 1991. 16p. Order Number DE92570125. Source: OSTI; NTIS (US Sales Only); INIS.

The decay $\eta \rightarrow \pi^+\pi^-\gamma$ is analyzed using two recently developed chiral models which incorporate vector mesons. One of the models generates a rate and photon spectrum which give an excellent fit to the experimental data. That model is then used to calculate $K_L \rightarrow \pi^+\pi^-\gamma$, and a rate which matches the experimental one is obtained with reasonable values of SU(3) breaking parameters. (author) 10 refs., 5 figs.

32178 (NIIYaF-MGU–90-37-183) **Restrictions on the fluxes of relativistic cosmic photinos according to neutrino experiment KAMIOKANDE.** Zaslavskaya, E.S.; Naumov, V.A. Moskovskij Gosudarstvennyj Univ., Moscow (Russian Federation). Nauchno-Issledovatel'skij Inst. Yadernoj Fiziki. 1990. 30p. (In Russian). Order Number DE92644949. Source: OSTI; NTIS (US Sales Only); INIS.

The cross sections of massive photino scattering on electron and nucleon are obtained. The flux limits of cosmic origin relativistic photinos for different values of photino and scalar fermion masses are obtained on the basis of underground KAMIOKANDE experiment and calculation of neutrino event number in the detector. 22 refs.; 7 figs.; 1 tab.

32179 (OUP–92-12) **A narrow centrally produced 3π resonance at 1080 MeV/c^2 observed in pp-reactions at 19 GeV/c.** Danielsen, K.M. (Oslo Univ., Fysisk Inst. (Norway)); Jacobsen, T.; Olsen, H.A. Oslo Univ. (Norway). Fysisk Inst. Apr 1992. 17p. Order Number DE93602626. Source: OSTI; NTIS; INIS.

A narrow centrally produced neutral 3π system is seen at about 1080 MeV/c^2 in the reaction $pp \rightarrow pp\pi^+\pi^-\pi^0$ at 19 GeV/c. There is no evidence of $\rho\pi$ in the final state of this system. Charged $\rho\phi$ systems have previously been seen in diffractive processes in this mass region, e.g. the old A_1(1080), though not in pp-reactions. The possibility that the resonance is a spin zero glueball created in gluon gluon resonance scattering is discussed. 11 refs., 9 figs.

32180 (OUP–92-16) **τ physics at LEP.** Dam, M. Oslo Univ. (Norway). Fysisk Inst. May 1992. 15p. Order Number DE93602654. Source: OSTI; NTIS; INIS.

Untill the end of the 1991 data taking period, the four LEP experiments have collected about 80000 $\tau^+\tau^-$ pairs. Many precise measurements of the production and decay properties of the τ lepton at the Z^o resonance have been performed. Accurate measurements of the τ lifetime along with measurements of inclusive and exclusive branching ratios provide interesting consistency tests in τ decays. Measurements from LEP confirm nonzero values of the average polarization of the τ, starting to yield precise measurements of the weak mixing parameter $\sin^2\theta_w$. A test of CP invariance in $\tau^+\tau^-$ production has been performed. 23 refs., 6 tabs.

32181 (SLAC-PUB–4596) **Inclusive charged hadron and K^0 production in two-photon interactions.** Cords, D.; Boyer, J.; Butler, F.; Gidal, G.; Abrams, G.S.; Amidei, D.; Baden, A.R.; Barklow, T.; Boyarski, A.M.; Breidenbach, M.; Burchat, P.R.; Burke, D.L.; Dorfan, J.M.; Feldman, G.J.; Gladney, L.; Gold, M.S.; Goldhaber, G.; Golding, L.J.; Haggerty, J.;.Lawrence Berkeley Lab., CA (United States); Stanford Linear Accelerator Center, Menlo Park, CA (United States); Harvard Univ., Boston, MA (United States). Mar 1988. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515 ;AC03-76SF00098. (LBL–25066;CONF-8804245–3: 8. International workshop on Photon-Photon Collisions, Jerusalem (Israel), 24-28 Apr 1988). Order Number DE92018231. Source: OSTI; NTIS; INIS; GPO Dep.

The analogous process to quark pair production in e^+ e^- annihilation is the hard-scattering quark exchange process in $\gamma\gamma$ interactions. This hard-scattering process is expected to dominate the cross section at high transverse momenta of the produced quarks. Experimentally, one has looked for this process in two-jet as well as inclusive particle production and has found a relatively low PT onset of hard scattering in $\gamma\gamma$ interactions. This report examines the issue in more detail (high statistics) for charged particle inclusive production and checks if the heavier flavors display a similar behavior in inclusive K^0 production.

32182 (SLAC-PUB–4830) **Chiral corrections to the anomalous 2γ decays of π^0, η and η'.** Issler, D. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Nov 1990. 3p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-8808145–35: 4. meeting of the Division of Particles and Fields of the American Physical Society (APS), Storrs, CT (United States), 15-18 Aug 1988). Order Number DE92019365. Source: OSTI; NTIS; INIS; GPO Dep.

To any order in chiral perturbation theory, the anomalous Wess-Zumino term is shown to generate only chirally invariant counterterms. Explicit examples of 0(p_6) terms generated by one-loop graphs are given, some of which are relevant to the two-photon decays of π^0, η and η'.

32183 (SLAC-PUB–5100) **A combined analysis of SLAC experiments on deep inelastic e-p and e-d scattering.** Whitlow, L.W. (Stanford Univ., CA (United States)); Bodek, A.; deBarbaro, P.; Dasu, S.; Harada, H.; Krasny, M.W.; Lang, K.; Riordan, E.M.; Rock, S.; Arnold, R.; Benton, D.; Bosted, P.; Button-Shafer, J.; deChambrier, G.; Clogher, L.; Lung, A.; Szalata, Z.MStanford Linear Accelerator Center, Menlo Park, CA (United States). Aug 1989. 19p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (UR–1119;ER–13065-586;CONF-890903–1: International europhysics conference on high-energy physics, Madrid (Spain), 6-14 Sep 1989). Order Number DE92018151. Source: OSTI; NTIS; INIS; GPO Dep.

We report recent work on the extraction of $R = \sigma_L/\sigma_T$ and the structure function F_2 over a large kinematic range, which is based on a reanalysis of deep inelastic $\varepsilon - p$ and $\varepsilon - d$ scattering cross sections measured at SLAC between 1970 and 1985. All these data were corrected for radiative effects using improved versions of external and internal radiative correction procedures. The data from seven individual experiments were normalized to those from the recent high-precision SLAC experiment E140. We find that $R_p = R_d$, as expected in QCD. The value of R is higher than predicted by QCD even when target-mass effects are included. This difference indicates that additional dynamical higher-twist effects may be present. The structure functions F_2p and F_2d were also extracted from the full data sets of normalized cross sections using an empirical fit to R. These structure functions were then compared with data from the CERN muon scattering experiments BCDMS and EMC. We find that our data are consistent with the EMC data, if the latter are multiplied by a normalization factor of 1.07. No single, uniform normalization factor can be applied to the BCDMS data that will bring them into agreement with the SLAC data in the region of overlap.

32184 (SLAC-PUB–5819) **Test of QED using a laser at the SLAC final focus test beam.** Spencer, J.E. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Apr 1992. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-9203159–7: 9. international workshop on photon-photon collisions, San Diego, CA (United States), 22-26 Mar 1992). Order Number DE92019647. Source: OSTI; NTIS; INIS; GPO Dep.

Experiment #144 at SLAC has three parts: the search for low-mass states excited in $\gamma\gamma$ collisions and observed in pair decay, the study of nonlinear, nonperturbative QED in γe and $\gamma\gamma$ collisions, and its possible applications to general purpose linear colliders. Such colliders could produce the full range of $J_{q\cdot\bar{q}}/^{PC}$ states, leptoquarks $J_{l\cdot\bar{q}}/^{PC}$, the particles of supersymmetry, the top quark or Higgs. However, to realize them a number of technical problems need resolution that are addressed in E144 together with interesting possibilities for highly polarized, high brightness $\gamma/^{\rightarrow}$ $e^{\rightarrow\pm}$ beams that are needed for electroweak studies.

Argonne National Lab., IL (United States); Ames Lab., IA (United States). Jun 1992. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-9206251–1: Physics beyond the standard model III conference, Ottawa (Canada), 22-24 Jun 1992). Order Number DE92018183. Source: OSTI; NTIS; INIS; GPO Dep.

Once it is discovered, the determination of the various couplings of a new neutral gauge boson at a hadron supercollider will not be an easy task. We review several recent studies that have begun to examine this issue for both the SSC and LHC.

32186 (CEA-CONF–10846) **The modification of hadrons propagating in dense media.** Ripka, G. CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Direction des Sciences de la Matiere. 1991. 6p. (CONF-9109291–: 5. mesons and light nuclei, Prague (Czechoslovakia), 1-6 Sep 1991). Order Number DE92566705. Source: OSTI; NTIS (US Sales Only); INIS.

The polarization of the medium must be distinguished from the modification of the intrinsic structure of hadrons in order to make a meaningful study of the modification of hadrons in dense matter. An unambiguous distinction is attempted in the case where mesons are described by the Nambu Jona-Lasinio model. The variation of the quark constituent mass is related to recent proposals to scale effective lagrangians.

32187 (CEA-LNS-Ph–92-14) **Electroproduction of polarized Λ's.** Kunne, R.A. Laboratoire National Saturne - Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). 1992. 10p. Order Number DE93701205. Source: OSTI; NTIS (US Sales Only); INIS.

Lambdas are a powerful tool to explore spin effects of QCD. The λ polarization is self analyzing, as it is measurable from the angular distribution of the decay products. Two applications of polarized electroproduced λ's are suggested: the measurement of λ polarization at large transverse momentum as a possible test of QCD and the measurement of transversely polarized parton distributions.

32188 (CONF-920126–4) **The spin of the nucleon in deep inelastic lepton scattering experiments.** Mallot, G.K. (European Organization for Nuclear Research, Geneva (Switzerland). PPE Div.). Yale Univ., New Haven, CT (United States). Dept. of Physics. [1992]. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-92ER40704. From 13. international conference on few body problems in physics; Adelaide (Australia); 5-11 Jan 1992. Order Number DE92018854. Source: OSTI; NTIS; INIS; GPO Dep.

The current experimental status of the spin dependent structure functions as measured in polarized deep inelastic scattering of charged leptons from nucleons is reviewed. The proposals for new experiments at CERN, SLAC and HERA are discussed with special emphasis on the experiment of the Spin Muon collaboration at CERN which has started data taking.

32189 (FNAL/C–92/165) **Particle production and survival in muon acceleration.** Noble, R.J. Fermi National Accelerator Lab., Batavia, IL (United States). Jun 1992. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03000. (CONF-9206193–6: Advanced accelerator concepts workshop, Port Jefferson, NY (United States), 14-20 Jun 1992). Order Number DE92019553. Source: OSTI; NTIS; INIS; GPO Dep.

Because of the relative immunity of muons to synchrotron radiation, the idea of using them instead of electrons as probes in high-energy physics experiments has existed for some time, but applications were limited by the short muon lifetime. The production and survival of an adequate supply of low-emittance muons will determine the available luminosity in a high-energy physics collider. In this paper the production of pions by protons, their decay to muons and the survival of muons during acceleration are studied. Based on a combination of the various efficiencies, the number of protons needed at the pion source for every muon required in the final high-energy collider is estimated.

32190 (IC–92/167) **Detection of charged Higgs bosons through the rare decay $H^+ \rightarrow W^+\gamma$.** Raychaudhuri, S. (International Centre for Theoretical Physics, Trieste (Italy)); Raychaudhuri, A. International Centre for Theoretical Physics, Trieste (Italy). Jul 1992. 17p. Order Number DE92645054. Source: OSTI; NTIS (US Sales Only); INIS.

The process $H^+ \rightarrow W^+\gamma$ is evaluated exactly in the 't Hooft-Feynman gauge in a two-Higgs doublet model with scalar masses and couplings as in the Minimal Supersymmetric Standard Model. At hadron colliders this rare decay might provide a clean signal for detection of charged Higgs particles lighter than the top quark. (author). 13 refs, 3 figs.

Source: OSTI; NTIS (US Sales Only); INIS.

This paper keeps only that part of the hyperspherical basis sufficient to reproduce correctly the 2-body correlations of the wave functions. The resulting formalism is tractable and the authors were able to present results for even numbers of bosons (4,6,8,12,16) and for fermions (Oxygen). Their test potentials are the Afnan-Tang S3 and the Malfliet-Tjon V. The results are discussed and compared with those obtained by different methods. (author) 38 refs., 3 figs., 6 tabs.

32194 (JINR-E–2-91-114) **H^+H^- interaction up to higher orders of perturbation theory in the model with two Higgs doublets (self-energy and vertex diagrams).** Dvoeglazov, V.V. (Saratovskij Gosudarstvennyj Univ., Saratov (Russian Federation)); Skachkov, N.B. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1991. 26p. Order Number DE92645055. Source: OSTI; NTIS (US Sales Only); INIS.

Self-energy and vertex blocks that enter into the amplitude of Higgs-Higgs-interaction are calculated up to the fourth order of perturbation theory in the framework of the model of electroweak interaction with two Higgs doublets and an arbitrary number of fermions. The renormalization is performed on the mass shell of the physical fields after a spontaneous symmetry breaking. The values of the coupling constants are, as a rule, not concretized in the paper. In the cases where it is needed to use them, their values obtained in the model with the minimal supersymmetric extension of the standard model (MSSM) are taken. 29 refs.; 1 tab.

Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1991. 7p. Order Number DE93602673. Source: OSTI; NTIS (US Sales Only); INIS.

Recent $J/\phi \rightarrow \pi^+\pi^-$ data analyzed along with all existing pion form factor data by means of the unitary and analytic vector dominance model manifest a strong evidence of the third excited state of the $\rho(770)$ meson with resonance parameters $m_{\rho'''}=2169\pm46$ MeV and $\Gamma_{\rho'''}=319\pm136$ MeV. A simultaneous analysis of all reliable proton and neutron form factor data in the space-like region along with data on the total cross section of electron-positron annihilation into a proton-antiproton pair by the same model predicts an unexpected inequality σ_{tot}(e^{e-}+→nn-bar)>>σ_{tot} (e$^+$e$^-$→pp-bar) just above the nucleon-antinucleon threshold and also surprisingly large one-photon electromagnetic corrections to the strong J/ϕ→pp-bar and J/ϕ→nn-bar decay amplitudes. 21 refs.; 5 figs.; 1 tab.

32196 (JINR-E--2-91-180) **Inverse pion electroproduction at high energies- a source of information on the hadron form factors.** Surovtsev, Yu.S. (Joint Inst. for Nuclear Research, Dubna (USSR). Source: OSTI; NTIS (US Sales Only); INIS.

Processes γN→$\pi^\pm$N, eN→e$\pi^\pm$N, πN→e$^+$e$^-$N, π^-p→ρ^0n are considered in the framework of the unified dispersive model at high energies and small momentum transfer. A conclusion is drawn on the reduction of the rescattering effects with increasing time-like values of virtual photon ^{m}ass· Thus simple electric Born model for the description of the process of inverse electroproduction (and π^-p→ρ^0n) in indicated kinematic region is grounded and conclusion on the possibility of receiving reliable information on hadron structure from the experimental data on this process is drawn. 27 refs.; 1 fig.

32197 (LAL--91-48) **Searches for new particles at LEP.** Davier, M. Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire. Dec 1991. 28p. (CONF-9107172--: 15. joint international lepton photon symposium at high energies and European Physical Society (EPS) conference on high energy, Geneva (Switzerland), 25 Jul - 1 aug 1991). Order Number DE92570113. Source: OSTI; NTIS (US Sales Only); INIS.

A review of the results from ALEPH, DELPHI, L3, and OPAL on searches for new particles is given. No evidence for a positive signal is seen, but significant and constraining limits are placed. In particular, the Standard Higgs boson must be heavier than 57 GeV and Higgs bosons from the minimal supersymmetric theories are strongly constrained, with the lightest CP-even state heavier than 43 GeV and the CP-odd state heavier than 20 GeV. Precision electroweak measurements of the Z parameters are on the verge of producing Higgs-sensitive results. No indication of compositeness is found for fermions and for the Z^0 boson, and the transition Z → 3γ has to be smaller than 10^{-5} of the total Z rate. Lepton flavour conservation still holds in Z decays at a level of a few 10^{-5}. (author) 67 refs., 41 figs., 9 tabs.

32198 (LAPP-TH--322/90) **Phenomenology of one extra neutral Z.** Verzegnassi, C. Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules Elementaires. Dec 1990. 17p. (CONF-9010510--: 1. International triangle workshop CERN-IHEP-JINR, Dubna (USSR), 1-5 Oct 1990). Order Number DE92570088. Source: OSTI; NTIS (US Sales Only); INIS.

The main features and limits of present and future indirect searches of one extra neutral Z of general theoretical origin are overviewed. At the end of the LEP and of the pp collider runs, negative searches of a Z' will force this particle to be characterized in general by a high (more than ≈5-6 TeV) mass and by a very low mixing angle in orthodox cases. These negative features might lead to severe restrictions on the candidate models and, possibly, to a deeper theoretical understanding of their origin. (R.P.) 16 refs., 7 figs.

32199 (LAPP-TH--329/91) **Electromagnetic interactions and chirality flip of neutrinos in a thermal background.** Altherr, T. (Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules Elementaires); Kainulainen, K. Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules Elementaires. Mar 1991. 9p. Order Number DE92570091. Source: OSTI; NTIS (US Sales Only); INIS.

The finite temperature and density effects on the electromagnetic properties of neutrinos are investigated. For a Standard Model neutrino a left-handed effective charge and a chirality flipping term associated with the longitudinal photon exchange were found. In the supernova the chirality flipping rate was shown to be two orders of magnitude larger than the previous estimates using the vacuum magnetic moment. (author) 16 refs., 1 fig.

32200 (LAPP-TH--343/91) **Higgsometry from Ultimate LEP.** Blondel, A. (Ecole Polytechnique, 91 - Palaiseau (France). Lab. de Physique Nucleaire et des Hautes Energies); Renard, F.M.; Verzegnassi, C. Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules Elementaires. Jul 1991. 12p. Order Number DE92570095. Source: OSTI; NTIS (US Sales Only); INIS.

The bounds that could be set on the mass of the Standard Model Higgs boson from Electroweak measurements (Γl, M$_W$, A$_{LR}$) and measurement of the top quark mass, at LEP and the Tevatron are analysed. Significant bounds would be obtained (ΔM$_H$/M$_H$≈35%) for the Ultimate LEP configuration, with longitudinal polarization and high luminosity simultaneously available. (author) 17 refs., 2 figs.

32201 (LA-UR--92-1736) **The proton Compton effect: Recent measurements of the electric and magnetic polarizabilities of the proton.** Federspiel, F.J. Los Alamos National Lab., NM (United States). [1992]. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9205234--1: The hadron structure workshop, Brookhaven, NY (United States), 28-29 May 1992). Order Number DE92017594. Source: OSTI; NTIS; INIS; GPO Dep.

A review of the experimental situation regarding the electric and magnetic polarizabilities of the proton is presented. The polarizabilities extracted from an analysis of two recent experiments are: $\bar{\alpha}$ = (10.8±1.0±1.0)x10^{ber}4 fm ^{3} and $\bar{\alpha}$=(3.4∓1.0∓1. 0) x 10^4 fm^3.

32202 (LA-UR--92-1768) **Neutrino mass.** Robertson, R.G.H. Los Alamos National Lab., NM (United States). [1992]. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9204182--1: Franklin symposium, Philadelphia, PA (United States), 29 Apr - 1 may 1992). Order Number DE92017411. Source: OSTI; NTIS; INIS; GPO Dep.

Despite intensive experimental work since the neutrino's existence was proposed by Pauli 60 years ago, and its first observation by Reines and Cowan almost 40 years ago, the neutrino's fundamental properties remain elusive. Among those properties are the masses of the three known flavors, properties under charge conjugation, parity and time-reversal, and static and dynamic electromagnetic moments. Mass is perhaps the most fundamental, as it constrains the other properties. The present status of the search for neutrino mass is briefly reviewed.

32203 (CEA-CONF--10845) **Nuclear physics in a swelled world.** Rho, M. CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Direction des Sciences de la Matiere. 1991. 15p. (CONF-9109127--: Workshop on baryon spectroscopy and the structure of the nucleon, Saclay (France), 23-25 Sep 1991). Order Number DE92566704. Source: OSTI; NTIS (US Sales Only); INIS.

The notion of swelled world is developed in terms of an effective chiral Lagrangian implemented with conformal (trace) anomaly. It is suggested that nuclear processes be described by a systematic chiral expansion with this Lagrangian. An application is made to the strong enhancement of axial-charge matrix elements observed in heavy nuclei. Possible implications on QCD phase transitions are discussed.

32204 (CNIC--00492) **Communication of nuclear data progress: No.4(1990).** Chinese Nuclear Data Center, Beijing, BJ (China); China Nuclear Information Centre, Beijing, BJ (China). Dec 1990. 75p. (CNDC--0005;INDC(CPR)--019/L.). Order Number DE93602695. Source: OSTI; NTIS (US Sales Only); INIS.

Communication of Nuclear Data Progress (CNDP) in English is set up by Chinese Nuclear Committee and Chinese Nuclear Data Center (CNDC). This is the fourth issue. It includes measurements of neutron smaee angle scattering cross sections for Fe, Ni and Cr; n-D scattering phase-shift and ^{17}O R-matrix analyses; calculations of neutron elastic and inclastic scattering from ^{7}Li; evaluations of ^{2}H(n,2n), ^{23}Na, ^{59}Co(n, γ), ^{235,238}U, ^{239}Pu(n,f) and

(n, γ) cross sections; and a fitting code of corrected SLBW with multilevel effect (CBNFIT); R-matrix analysis code (RAC) etc.

Order Number DE92040011. Source: OSTI; NTIS; INIS; GPO Dep.

In order to make it easy for the reader to see the specific research carried out and the progress made, the following report of progress is done by topic. Each item has a format layout of Topic, Investigators, Objective, Significance, and Description of Progress, followed at the end by the relevant references. As is clear from the topics listed, the emphasis of the George Washington University (GWU) theory group has been on the structure and electromagnetic interactions of few-body nuclei. Both low- and intermediate-energy electromagnetic disintegration of these nuclei is considered. When the excitation energy of the target nucleus is low, the aim has been to handle the continuum part of the theoretical work numerically with no approximations, that is, by means of full three- or four-body dynamics. When structure questions axe the issue, numerically accurate calculations axe always carried through, limited only by the underlying two-body or three-body interactions used as input. Implicit in our work is the question of how far one can go within the traditional nuclear physics framework, i.e., nucleons and mesons in a nonrelativistic setting. Our central goal is to carry through state-of-the-art fewbody calculations that wig serve as a means of determining at what point standard nuclear physics requires quark degrees of freedom in order to understand the phenomena in question. So far, in the problems considered, there has been no evidence of the necessity to go beyond the traditional approach, though we always keep in mind that possibility. As our work is involved with questions in the intermediate-energy realm, moving from a nonrelativistic framework to a relativistic one is always a consideration. Currently, for the problems that have been pursued in this domain of energy, the issues concern far more the mechanisms of the reactions and structural questions than the need to move to relativistic dynamics.

Abstracts of studies done in 1989 at the Department of Theoretical Physics of the H. Niewodniczanski Institute of Nuclear Physics in Cracow are given together with the lists of personnel, guests, conference papers, lectures, habilitations, ph.d. theses and publications. 45 refs. (A.S.).

32210 (JAERI-M–92-027) **Proceedings of the 1991 symposium on nuclear data.** Baba, Mamoru (Tokyo Univ. (Japan)); Nakagawa, Tsuneo. Japan Atomic Energy Research Inst., Tokai, Ibaraki (Japan). Japanese Nuclear Data Committee. ©Mar 1992. 406p. Sponsored by Japan Atomic Energy Research Inst., Tokyo (Japan). (CONF-9111211–: 1991 Japan Atomic Energy Research Institute (JAERI) symposium on nuclear data, Tokai (Japan), 28-29 Nov 1991). Order Number DE92012612. Source: OSTI; NTIS (US Sales Only).

The 1991 Symposium on Nuclear data was held at Tokai Research Establishment, Japan Atomic Energy Research Institute (JAERI), on 28th and 29th of November 1991. This symposium was organized by Japanese Nuclear Data Committee and Nuclear Data Center, JAERI. In the oral session, presented were 15 papers on nuclear data activities in Thailand, status reviews of JENDL-3 and its special purpose files, OMEGA program and ESNIT promoted by JAERI and related nuclear data, reviews of nuclear theories, nuclear data in the intermediate energy region, topics on knowledge technology and reactor physics. In the poster session, twenty-three papers were presented, which were related to nuclear data measurements, benchmark tests of evaluated data and evaluation. All of the 38 papers are compiled in the proceedings.

32211 (JAERI-M–92-039) **Proceedings of the specialists' meeting on high energy nuclear data.** Fukahori, Tokio (ed.). Japan Atomic Energy Research Inst., Tokai, Ibaraki (Japan). ©Mar 1992. 216p. Sponsored by Japan Atomic Energy Research Inst., Tokyo (Japan). (INDC(JPN)–158/L;CONF-9110373–: Specialists' meeting on high energy nuclear data, Tokai (Japan), 3-4 Oct 1991). Order Number DE92012299. Source: OSTI; NTIS (US Sales Only).

This report consists of the Proceedings of the Specialists' Meeting on High Energy Nuclear Data. The meeting was held on October 3–4, 1991, at the Tokai Research Establishment, Japan Atomic Energy Research Institute with the participation of forty-odd specialists, who were the evaluators, theorists, experimentalists and users of high energy nuclear data including the members of Japanese Nuclear Data Committee. The need of the nuclear data in the high energy region up to a few GeV was stressed in the meeting for many applications, such as spallation neutron sources for radioactive waste treatment, accelerator shielding design, medical isotope production, radiation therapy, the effects of space radiation on astronauts and their equipments, and the cosmic history of meteorites and other galactic substances. Although the neutron nuclear data below 20 MeV have been well evaluated for fission and fusion reactor applications, the nuclear data in the high energy region have never been prepared in Japan. With the view of producing an evaluated high energy nuclear data file, theoretical models and codes, available and necessary measurements, needs of nuclear data, and various applications were reviewed and discussed. The consensus, that the wide collaboration was necessary to produce the evaluated file and should be established, has been obtained.

Many theoretical models have been employed to described the structure of the nucleus ^{24}Mg. Among these are the Cranked Shell model (CSM), the Cranked Cluster Model (CCM), and calculations have also been performed using the Hartree-Fock formalism. One very striking prediction of these calculations is that in this nucleus there exist very unusual configurations, with structures reminiscent of linear chains of alpha particles. In the CSM, for instance, such a configuration is identified with a pronounced minimum in the potential energy energy at very large prolate deformation. In the CCM, several very different alpha-particle duster configurations are identified, many having rather large deformations. These cluster configurations can be associated with the different potential-energy minima obtained in the CSM results. In the case of the CCM, a 6α chain-like configuration is predicted to occur at excitation energies between 40 and 50 MeV, with predicted rotational spacing given by $\hbar^2/2I$=22 keV. At this excitation energy, such a chain configuration would lie well above the threshold for the decay of ^{24}Mg into 6 alpha particles, and its identification poses a difficult experimental challenge. This report discusses this challenge.

32213 (CONF-920721–7) **Study of short-lived rare earth nuclei near the proton drip line.** Toth, K.S. (Oak Ridge National Lab., TN (United States)); Nitschke, J.M.; Wilmarth, P.A.; Sousa, D.C.; Vierinen, K.S. Oak Ridge National Lab., TN (United States). [1992]. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400 ;AC03-76SF00098. From 6. international conference on nuclei far from stability and 9th international conference on atomic masses and fundamental constants; Bernkastel-Kues (Germany); 19-24 Jul 1992. Order Number DE92019938. Source: OSTI; NTIS; INIS; GPO Dep.

We have investigated the nuclear structure characteristics of neutron-deficient rare earth nuclei near the proton drip line by studying the decay properties of short-lived isotopes produced in bombardments of Ru,Mo, and Nb targets with ^{58}Ni and ^{64}Zn ions extracted from the Lawrence Berkeley Laboratory SuperHILAC. Products of interest were mass separated with the OASIS on-line facility and then assayed with particle and γ-ray detectors. In this contribution we discuss recent results dealing with the decays of ^{145}Dy, ^{155}Lu, and ^{154}Tm.

32214 (CRN-PHTH–91-12) **Towards superdeformation in the quasicontinuum: microscopic view of the excited superdeformed bands and the corresponding level densities.** Werner, T.R.; Dudek, J. Strasbourg-1 Univ., 67 (France). Centre de Recherches Nucleaires. 1991. 17p. Order Number DE92570099. Source: OSTI; NTIS (US Sales Only); INIS.

Microscopic calculations of both the normal and the superdeformed rotational bands have been performed for a number of Rare Earth nuclei. The 'universal' Woods-Saxon potential and the extended Strutinsky method have been used. Excited bands up to a prescribed energy limit E* (usually 2.5 to 3.5 MeV) have been calculated individually by minimizing the corresponding nuclear energies over the quadrupole and hexadecapole deformations. This turns out to be essential, when comparing with experimental results for the known discrete bands. An important influence of the superdeformed neutron (N = 86) shell closure on the microscopically calculated rotational-level densities is illustrated and discussed. (author) 11 refs., 4 figs.

32215 (CRN-PHTH–91-19) **Nuclear superdeformation at high spins.** Dudek, J. Strasbourg-1 Univ., 67 (France). Centre de Recherches Nucleaires; Strasbourg-1 Univ., 67 (France). 1991. 55p. Order Number DE93701130. Source: OSTI; NTIS (US Sales Only); INIS.

The newly discovered forms of nuclear behavior at exotic shape configurations are discussed from the theoretical point of view. The main emphasis is set on superdeformed nuclei and the strange mechanisms influencing their properties. In particular the feeding properties, alignment, pairing properties and the problem of anomalous degeneracies are discussed.

32216 (ECN-RX–91-050) **European Activation File for fusion: Presented at the International Conference on Nuclear Data for Science and Technology, Juelich, Federal Republic of Germany, 13-17 May 1991.** Kopecky, J. (Netherlands Energy Research Foundation (ECN), Petten (Netherlands)); Gruppelaar, H.; Forrest, R.A. Netherlands Energy Research Foundation (ECN), Petten (Netherlands). May 1991. 21p. (CONF-910503–: International conference on nuclear data for science and technology, Juelich (Germany), 13-17 May 1991). Order Number DE93602702. Source: OSTI; NTIS; INIS.

This paper describes the work performed to revise and extend the European Activation File (EAF). Extensions, revisions and improvements made in the first two versions of the file (EAF-1, EAF-2) are discussed as well as the work which is planned for EAF-3. The EAF-2 file contains cross-sections for all stable and unstable nuclides with half-lifes exceeding 0.5 day. Cross-sections leading to isomeric states are given separately and those isomeric states with $T_{1/2}>0/5$ day are included as targets. The EAF-2 version contains about 11000 reactions on 667 targets. The EAF-2 data file will be further extended and improved and will be supplied with uncertainty information. (author). 30 refs.; 5 figs.; 4 tabs.

32217 (ECN-RX–91-054) **The sensitivity of statistical model capture calculations to model assumptions: Presented at the International Conference on Nuclear Data for Science and Technology, Juelich, Federal Republic of Germany, 13-17 May 1991.** Uhl, M. (Vienna Univ. (Austria). Inst. fuer Radiumforschung und Kernphysik); Kopecky, J. Netherlands Energy Research Foundation (ECN), Petten (Netherlands). May 1991. 5p. (CONF-910503–: International conference on nuclear data for science and technology, Juelich (Germany), 13-17 May 1991). Order Number DE93602703. Source: OSTI; NTIS; INIS.

The most important ingredients of statistical model capture calculations are gamma-ray strength functions f_{XL} for E1 and M1 radiation, level densities and optical potentials. The influence of uncertainties of these quantities was studied with the aim to improve the predictive power of such calculations. Spherical and deformed targets in the mass range A=55-197 were considered. Among different strength function models compatible with independent experimental data the best results were obtained with f_{E1} derived from a 'generalized' Lorentzian and f_{M1} from a standard one. The former is characterized by an energy dependent width and results in a non-zero limit of f_{E1} as the energy tends to zero. A generalization of the energy dependence of the width was required for deformed nuclei with masses between 151 and 175. A marked sensitivity was observed on different level density models with parameters based on the same experimental data. The influence of the neutron optical potential is in general rather weak. (author). 18 refs.; 4 figs.

32218 (GANIL-P–91-22) **Comment on the width and the life-time of multiphonon states.** Chomaz, Ph. (Grand Accelerateur National d'Ions Lourds (GANIL), 14 - Caen (France)); Van Giai, N. Grand Accelerateur National d'Ions Lourds (GANIL), 14 - Caen (France). 1991. 5p. Order Number DE92570104. Source: OSTI; NTIS (US Sales Only); INIS.

The relation between the width of a multiphonon state and the width of the single phonon is discussed. While it is clear that the inverse of the multiphonon life-time $1/\tau$ is an additive function of the inverse of the phonon life-times $1/\tau_i$, it is pointed out that this is not necessarily true for the width of the multiphonon response function, and that the phonon widths can be quadratically additive. (author) 10 refs.

32219 (GANIL-P–91-24) **From experimental monopole cross-sections to nuclear incompressibilities.** Chomaz, Ph. (Grand Accelerateur National d'Ions Lourds (GANIL), 14 - Caen

(France)); Suomijaervi, T.; Van Giai, N.; Treiner, J. Grand Accelerateur National d'Ions Lourds (GANIL), 14 - Caen (France). 1991. 19p. Order Number DE93703445. Source: OSTI; NTIS (US Sales Only); INIS.

The procedure used to extract strength functions from experimental data is tested. This test is performed on a set of pseudo-data generated from HF and RPA results for monopole resonances in ^{40}Ca, ^{60}Ni, ^{90}Zr and ^{208}Pb. It is shown how the scaling approximation used in the experimental analysis may induce systematic errors. It is demonstrated, however, that whereas the discrepancy on the high energy component can be large, the distortion in the giant monopole resonance region is of the order of 10 to 30% only. Moreover, when ratios of moments are considered, the errors partially compensate one another. The systematic errors on the form factors have little influence on the extracted scaling energy from which nuclear incompressibilities are deduced. (author) 10 refs., 3 figs.

32220 (INIS-mf--14069, pp. 26-32) **Phase-transitions in nuclear matter: Deconfinement of quarks and gluons?.** Rischke, D.H. (Inst. fuer Theoretische Physik der J.W. Goethe Univ., Frankfurt am Main (Germany)); Gorenstein, M.I.; Schaefer, A.; Stoecker, H.; Greiner, W. Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany); Technische Hochschule Darmstadt (Germany). Inst. fuer Kernphysik. 1992. 310p. (CONF-920195--: 20. international workshop on gross properties of nuclei and nuclear excitation: Heavy-ion collisions at intermediate and high energies, Hirschegg (Austria), 20-25 Jan 1992). In *Gross properties of nuclei and nuclear excitations. Proceedings.* Order Number DE92557961. Source: OSTI; NTIS (US Sales Only); INIS.

We investigate lattic data for the thermodynamical functions of the SU (3) pure gauge theory and propose a phenomenological equation of state which is able to reproduce these data. Our results suggest that even at high temperature only gluons with large moments are deconfined, while gluons with small momenta cluster into glueball states. Therefore, the gluon plasma is not an ideal gas of gluons, but rather a 'gluon-cluster' plasma. (orig.).

32221 (INIS-mf--14069, pp. 33-37) **'Local' EMC effects and the J/ψ suppression.** Kumano, S. (Nuclear Theory Center, Indiana Univ., Bloomington, IN (United States)). Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany); Technische Hochschule Darmstadt (Germany). Inst. fuer Kernphysik. 1992. 310p. (CONF-920195--: 20. international workshop on gross properties of nuclei and nuclear excitation: Heavy-ion collisions at intermediate and high energies, Hirschegg (Austria), 20-25 Jan 1992). In *Gross properties of nuclei and nuclear excitations. Proceedings.* Order Number DE92557961. Source: OSTI; NTIS (US Sales Only); INIS.

We investigate a dependence of the 'old' EMC effect on nuclear structure, namely the dependence in the location of the struck quark within a nucleus ('local' EMC effect). Using the rescaling model and the nuclear binding model, we find that scattering from a central or deeply bound constituent gives a larger EMC effect than scattering from a surface or weakly bound constituent. Central and surface gluon distributions, which are important in the J/ψ suppression, are inverstigated by using the parton recombination model and Q^2 rescaling model. We find that such initial condition effects on the J/ψ suppression are of the order of 5-10% and that a calculated p_T slope for the J/ψ is smaller than the observed by NA38. (orig.).

32222 (INIS-mf--14069, pp. 89-93) **Nucleus as a canonical ensemble.** Sato, Hiroshi (Radiation Lab., RIKEN, Wako, Saitama (Japan)). Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany); Technische Hochschule Darmstadt (Germany). Inst. fuer Kernphysik. 1992. 310p. (CONF-920195--: 20. international workshop on gross properties of nuclei and nuclear excitation: Heavy-ion collisions at intermediate and high energies, Hirschegg (Austria), 20-25 Jan 1992). In *Gross properties of nuclei and nuclear excitations. Proceedings.* Order Number DE92557961. Source: OSTI; NTIS (US Sales Only); INIS.

Thermodynamical quantities of the nucleus at both low and high excitation energies studied in terms of temperature dependent antisymmetrized density matrices of many fermions in a harmonic oscillator well. Relationships with the conventional shell model and level density formula are discussed. Extending the method to the deformed nucleus, the Strutinsky type level density distributions are found at low temperature limit. (orig.).

32223 (INIS-mf--14069, pp. 170-177) **Two-loop corrections for nuclear matter in the Walecka model with form factors.** Friedrich, R. (Inst. fuer Kernphysik, Technische Hochschule Darmstadt (Germany)); Wehrberger, K.; Beck, F. Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany); Technische Hochschule Darmstadt (Germany). Inst. fuer Kernphysik. 1992. 310p. (CONF-920195--: 20. international workshop on gross properties of nuclei and nuclear excitation: Heavy-ion collisions at intermediate and high energies, Hirschegg (Austria), 20-25 Jan 1992). In *Gross properties of nuclei and nuclear excitations. Proceedings.* Order Number DE92557961. Source: OSTI; NTIS (US Sales Only); INIS.

In the framework of the Walecka model we show that a nucleon-meson form factor can improve the behaviour of two-loop corrections for nuclear matter significantly. The effects of the vacuum fluctuations are strongly suppressed with respect to a calculation without form factors. The main contributions to the energy density are now given by nucleons in the Fermi sea. (orig.).

32224 (INIS-mf--14069, pp. 178-182) **Properties of the ρ-meson in dense nuclear matter.** Herrmann, M. (Gesellschaft fuer Schwerionenforschung (GSI), Darmstadt (Germany)); Friman, B.L.; Noerenberg, W. Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany); Technische Hochschule Darmstadt (Germany). Inst. fuer Kernphysik. 1992. 310p. (CONF-920195--: 20. international workshop on gross properties of nuclei and nuclear excitation: Heavy-ion collisions at intermediate and high energies, Hirschegg (Austria), 20-25 Jan 1992). In *Gross properties of nuclei and nuclear excitations. Proceedings.* Order Number DE92557961. Source: OSTI; NTIS (US Sales Only); INIS.

The properties of ρ-mesons in dense nuclear matter are studied in a model which satisfies unitarity and current conservation. The important coupling of the ρ-meson to two pions as well as the strong mixing of pions and delta-nuclear-hole states in nuclear matter are included. The ρ-meson self enery in nuclear matter is evaluated with in-medium pion propagators and the corresponding vertex corrections required by current conservation. We find that the ρ-meson width grows drastically with increasing density while its mass remains almost unchanged. (orig.).

32225 (INIS-mf--14069, pp. 183-187) **Coupling and decoupling of pions and deltas in nuclear matter.** Xia Linhua (Physics Dept., Oregon State Univ., Corvallis, OR (United States)); Siemens, P.J.; Soyeur, M. Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany); Technische Hochschule Darmstadt (Germany). Inst. fuer Kernphysik. 1992. 310p. (CONF-920195--: 20. international workshop on gross properties of nuclei and nuclear excitation: Heavy-ion collisions at intermediate and high energies, Hirschegg (Austria), 20-25 Jan 1992). In *Gross properties of nuclei and nuclear excitations. Proceedings.* Order Number DE92557961. Source: OSTI; NTIS (US Sales Only); INIS.

We implement the delta-hole model for pions in nuclear matter, including self-consistent real and imaginary self energies for both pions and deltas via dispersion relations cut off by form factors. The real part of the pion inverse propagator vanishes at only one energy for each momentum, unlike the conventional picture of level mixing and level repulsion, because of the width of the delta-hole excitation. Results agree with experiments on baryonic charge-exchange reactions and photo-absorption by heavy nuclei. (orig.).

32226 (INIS-mf--14069, pp. 188-192) **Modifications of scalar and vector mesons in nuclear matter.** Mull, V. (Inst. fuer Kernphysik, KFA Juelich (Germany)); Wambach, J.; Speth, J. Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany); Technische Hochschule Darmstadt (Germany). Inst. fuer Kernphysik. 1992. 310p. (CONF-920195--: 20. international workshop on gross properties of nuclei and nuclear excitation: Heavy-ion collisions at intermediate and high energies, Hirschegg (Austria), 20-25 Jan 1992). In *Gross properties of nuclei and nuclear excitations. Proceedings.* Order Number DE92557961. Source: OSTI; NTIS (US Sales Only); INIS.

Starting from the realistic dynamical model for the $\pi\pi$ interaction recently developped by the Juelich group, we study the modifications of the scalar-isoscalar and vector-isovector mesons occuring as resonances in 2π scattering in nuclear matter due to charges of the pion dispersion relation. (orig.).

Investigations related to very neutron rich isotopes in the region of Ni are reported. These studies are relevant for understanding a new region of double magicity, and they are required to reproduce element abundances in the solar system. A method was developed to measure half lives for very low fragment counting rates. The results obtained with thermal fission are reported and discussed. The next experimental step at GSI using projectile fragments of the SIS ^{86}Kr beam separated by the FRS is presented. (author) 8 refs., 4 figs., 1 tab.

32229 (IPNO-TH–90-73) **Nuclear physics of hot dense matter.** Vautherin, D. (Paris-11 Univ., 91 - Orsay (France). Div. de Physique Theorique). Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. Mar 1991. 60p. Order Number DE92570073. Source: OSTI; NTIS (US Sales Only); INIS.

The equation of state of hot dense matter is an essential ingredient to describe the gravitational contraction of massive stars. Some of the nuclear physics problems occurring in the determination of the equation of state of hot dense matter are discussed. This particularly rich domain of nuclear physics deals with very unusual nuclei, whose mass numbers can be sometimes as large as a thousand, whose existence becomes possible in dense matter because of the screening of Coulomb forces. A calculation of the properties of hot nuclear matter in the mean field approximation is presented. It is shown that a useful approximation to study the phase equilibrium equations is to consider low temperature expansions for the nucleus expansions for the vapor. A simple formula is derived for the limiting temperature T_L beyond which nuclei no longer exist. The equation of state is discussed at subnuclear density and in the domain densities greater than the nuclear saturation density. The standard methods of non relativistic many-body theory as well as relativistic mean-field and Dirac-Brueckner approaches are also discussed. (K.A.) 70 refs., 9 figs.

32230 (IPNO-TH–91-14) **Response functions for infinite fermion systems with velocity dependent interactions.** Garcia-Recio, C. (Granada Univ. (Spain). Dept. de Fisica); Salcedo, L.L.; Navarro, J.; Nguyen Van Giai. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 5 Mar 1991. 71p. Order Number DE92570076. Source: OSTI; NTIS (US Sales Only); INIS.

Response functions of infinite Fermi systems are studied in the framework of the self-consistent Random Phase Approximation. Starting from an effective interaction with velocity and density dependence, or equivalently from a local energy density functional, algebraic expressions for the RPA response function are derived. Simple formulae for the energy-weighted and polarizability sum rules are obtained. The method is illustrated by applications to nuclear matter and liquid ^{3}He. In nuclear matter, it is shown that existing Skyrme interactions give spin-isospin response functions close to those calculated with finite range interactions. The different renormalization of longitudinal and transverse Coulomb sum rules in nuclear matter is discussed. In ^{3}He, the low-lying collective spin oscillation can be well described in a wide range of momenta with a Skyrme-type interaction if the relevant Landau parameters are fitted. For the high-lying density oscillation, the introduction of a finite range term in the energy functional improves considerably the agreement with the data. (author) 54 refs., 19 figs., 4 tabs.

32231 (IPNO-TH–91-41) **The integrodifferential equation approach compared with Shell Model calculations on the ^{4}He nucleus.** Adam, R.M. (University of South Africa (UNISA), Pretoria (South Africa). Dept. of Physics); Fiedeldey, H.; Sofianos, S.A.; Fabre de la Ripelle, M. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1991. 11p. Order Number DE92570082. Source: OSTI; NTIS (US Sales Only); INIS.

For the ^{4}He ground state and effective potentials the Integrodifferential Equation Approach (IDEA) is shown to produce binding energies which are more accurate than those calculated using an Harmonic Oscillator Shell Model basis and requires little numerical effort. This is because the IDEA employs the Potential Harmonic (PH) basis which is complete for two-body correlations generated by a two-body force, requiring only the solution of a two-variable integrodifferential equation of the Faddeev type. It can also easily be extended to larger nuclei with no additional effort and to realistic forces for ^{4}He. (author) 18 refs., 1 tab.

32232 (ISN–91-28) **The surface compression of nuclei in relativistic mean-field approach.** Sharma, M.M. Grenoble-1 Univ., 38 (France). Inst. des Sciences Nucleaires. 1991. 8p. (CONF-910135–: 7. winter workshop on nuclear dynamics, Key West, FL (United States), 27 Jan - 2 feb 1991). Order Number DE92570086. Source: OSTI; NTIS (US Sales Only); INIS.

The surface compression properties of nuclei have been studied in the framework of the relativistic non-linear σ-ω model. Using the Thomas-Fermi approximation for semi-infinite nuclear matter, it is shown that by varying the σ-meson mass one can change the surface compression as relative to the bulk compression. This fact is in contrast with the known properties of the phenomenological Skyrme interactions, where the ratio of the surface to the bulk incompressibility ($-K_S/K_V$) is nearly 1 in the scaling mode of compression. The results suggest that the relativistic mean-field model may provide an interaction with the essential ingredients different from those of the Skyrme interactions. (author) 23 refs., 2 figs., 1 tab.

32233 (JINR-E–2-91-150) **Hadronization of highly virtual quarks in nuclei.** Kopeliovich, B.Z.; Nemchik, J. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Nuclear Problems. 1991. 10p. Order Number DE92645069. Source: OSTI; NTIS (US Sales Only); INIS.

It is shown that bremsstrahlung by highly virtual quark causes a strong Q^2-dependence of retarding force on the contrary to orthodoxal colour-string model. As the result the length of hadron formation is considerably contracted. Leading hadrons originated from hadronization of a high-energy and highly virtual quark do not attenuate in nuclear matter due to effect of colour transparency. Predictions for deep ineslatic scattering and particle production with high transverse momenta on nuclei are made. 23 refs.

32234 (JINR-E–7-91-149) **New mass measurements of neutron-rich nuclei near N=20*.** Orr, N.A. (Michigan State Univ., East Lansing, MI (United States)); Mittig, W.; Fifield, L.K. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Nuclear Reactions. 1991. 8p. Order Number DE93602706. Source: OSTI; NTIS (US Sales Only); INIS.

The masses of 39 neutron-rich nuclei in the mass range 17 to 37 have been measured using a direct time-of-flight technique following the fragmentation of a ^{48}Ca beam at 55 MeV/nucleon. The masses of $^{29'30}$Ne, $^{34'35}$Mg and $^{36'37}$Al are reported for the first time. The very neutron-rich nuclei, $^{31-33}$Na, are found to be 2-4 MeV less bound than previously believed. Comparison is made with recently available large scale shell model calculations encompassing the deformed A≈32 nuclei. Conclusions are drawn regarding the extent of the region of deformation, which is found to include ^{30}Ne. 33 refs.; 3 figs.; 1 tab.

Submitted to Izv. Akad. Nauk SSSR, Ser. Fiz.

The Coriolis mixture of the ground, β-, γ-vibrational and $K^{\pi}=1^+$-bands of $^{156'158'160'162'164}$Dy isotopes is analyzed within a phenomenological model. The nonadiabaticities of quadrupole electric transitions from the γ-band are investigated. The values of the B(E2)-probability of transitions from the states of $K^{\pi}=1^+$ bands and the coefficients of mixture of multipoles $\delta(1^+1 \to 2^+0_{gr})$ are estimated by using the experimental data of the E2-transitions from the low-lying states. 19 refs.; 2 figs.; 5 tabs.

32238 (OUP–92-07) **Oscillator strengths for transition among low-lying quartet terms in the nitrogen isoelectronic sequence.** Andersen, J.O.; Aashamar, K. Oslo Univ. (Norway). Fysisk Inst. Mar 1992. 21p. Order Number DE92645071. Source: OSTI; NTIS; INIS.

The authors have calculated energies and transition rates for the $2p^{34}S^o$ ground state and a number of exited states in the isoelectronic sequence of atomic nitrogen using the Multiconfiguration optimized potential model. The exited states include the $3s^4P$, $2s2p^{44}P$, $3p^4D^o$, $3p^4P^o$, $3p^4S^o$, $3d^4F$, $3d^4D$ and $3d^4P$ terms. The oscillator strengths for transitions among these terms have been calculated in both length and velocity gauge. Particular emphasis has been put on an accurate description near level crossings. Comparison with other theoretical and experimental results are made. However, the experimental data are rather sparse, and verification of many of the calculated trends against experiment is therefore not yet possible. 24 refs., 5 figs., 10 tabs.

32239 (OUP–92-22) **Perturbative many-body approaches to finite nuclei.** Hjort-Jensen, M.; Engeland, T.; Holt, A.; Osnes, E. Oslo Univ. (Norway). Fysisk Inst. Jun 1992. 42p. Order Number DE93602740. Source: OSTI; NTIS; INIS.

In this work the authors discuss various approaches to the effective interaction appropriate for finite nuclei. The methods reviewed are the folded-diagram method of Kuo and co-workers and the summation of the folded diagrams as advocated by Lee and Suzuki. Examples of applications to sd-shell nuclei from previous works are discussed together with hitherto unpublished results for nuclei in pf-shell. Since the method of Lee and Suzuki is found to yield the best converged results, this method is applied to calculate the effective interaction for nuclei in the pf-shell. For the calculation of the effective interaction, three recent versions of the Bonn meson-exchange potential model have been used. These versions are fitted to the same set of data and differ only in the strength of the tensor force. The importance of the latter for finite nuclei is discussed. 67 refs., 17 figs., 7 tabs.

The decay of $(\pi h_{11/2})^n$ yrast isomers was studied in a series of proton-rich N = 82 isotones culminating in determination of B(E2) values in ^{153}Lu and ^{154}Hf. In the N = 82 isotones however, it seems unlikely that the measurements could be extended beyond ^{154}Hf (n = 8). The opportunity to investigate the $(h^{11/2})^n)$ isomers across the whole $h_{11/2}$ subshell exists, at least in principle, in Sn isotopes where the counterpart $\nu h_{11/2}$ subshell is being filled with neutrons starting at ^{116}Sn. Before our measurements were initiated, the $(\nu h_{11/2})^n$ 10^+ isomers were known to exist in ^{116,118,120}Sn, where the $\nu h_{11/2}$ subshell begins to fill, and in ^{128,130}Sn at the other end. Important information, however, was missing about the 10^+ isomers in ^{122,124,126}Sn where the long lifetimes are expected. The $\upsilon = 3$ $(h_{11/2})$ isomers in odd tin isomers for $A \geq 119$ were also not identified. A serious experimental difficulty in populating high spin states in heavier Sn isotopes is that they are not accessible by fusion-evaporation reactions. We decided to search for these missing tin isotopes among the products of heavy ion reactions on ^{122,124}Sn targets. Using this approach we were able to identify the isomeric decays and measure the lifetimes of the $(\nu h_{11/2}{}^n)$ $\upsilon = 2$ isomeric states in ^{122,124}Sn. In odd tin isotopes we identified new $I = 19/2^+$ yrast isomers in ^{119,121,123}Sn and measured their lifetimes. In addition $(\nu h_{11/2})^n$ $\upsilon = 3$, $I = 27/2^-$ isomers in ^{119,121}Sn were observed for the first time.

32241 (CNIC–00371) **A search for neutrinoless double beta decay of ^{48}Ca.** You Ke (Academia Sinica, Beijing, BJ (China). Inst. of High Energy Physics); Zhao Wenheng; Zhu Yucan. China Nuclear Information Centre, Beijing, BJ (China). Oct 1989. 7p. (In Chinese). (BIHEP–0015.). Order Number DE93602758. Source: OSTI; NTIS (US Sales Only); INIS.

A search for neutrinoless double beta decay of ^{48}Ca is being carried out in a coal mine near Beijing. Large scintillation crystals of natural CaF_2 are used as both the detector and the beta source. Results obtained after the first 1700 hours data taken give 3.6 x 10^{21} years as the lower limit of the half-life of the neutrinoless double beta decay of ^{48}Ca. The upper limit of effective neutrino mass calculated according to the theoretical half-life by Qing Chengrui et al is less than 13.7 eV. The experiment is still in progressing.

32242 (CONF-9110236–8) **Electromagnetic properties of ^{181}Ir: Evidence of β-stretching?.** Garg, U. (Notre Dame Univ., IN (United States). Dept. of Physics); Reviol, W.; Semmes, P. Tennessee Technological Univ., Cookeville, TN (United States). Dept. of Physics. [1991]. 5p. Sponsored by USDOE, Washington, DC (United States); National Science Foundation, Washington, DC (United States). DOE Contract FG05-92ER40694. Grant PHY 91-00688. From Working group 3 Joint Coordinating Committee on Nuclear Reactor Safety (JCCNRS) meeting; Oak Ridge, TN

(United States); 16-18 Oct 1991. Order Number DE92019755. Source: OSTI; NTIS; INIS; GPO Dep.

We have calculated the B(MI)/B(E2) ratios in ^{181}Ir within a shape-fixed particle + rotor model, in order to investigate how sensitive these may be to the nuclear shapes under consideration, and whether or not there is evidence of shape coexistence in the electromagnetic data alone. The model calculations employed the same Woods-Saxon potential that has been used previously for TRS and bandhead calculations and all parameters have been taken at their standard values, without any adjustments. To the extent possible with present models, these calculations should represent predictions for the B(M1)/B(E2) ratios at the deformations expected from the TRS and bandhead calculations. A comparison with the ^{181}Ir data is stimulated by the fact that this is the lightest-mass Ir nucleus for which the spins and parities am firmly established experimentally; we find that the electromagnetic transition rates in this nucleus are well reproduced under the assumption of a single, fixed shape.

32243 (CONF-9205108–12) **Lifetimes of the low spin states in the superdeformed band of ^{192}Hg.** Lee, I.Y. (Oak Ridge National Lab., TN (United States)); Baktash, C.; Cullen, D.; Garrett, J.D.; Johnson, N.R.; McGowan, F.K.; Winchell, D.F.; Yu, C.H. Oak Ridge National Lab., TN (United States). [1992]. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400 ;FG05-87ER40361. From International conference on nuclear structure at high angular momentum; Ottawa (Canada); 18-21 May 1992. Order Number DE92019177. Source: OSTI; NTIS; INIS; GPO Dep.

Superdeformed (SD) states with a 2:1 axis ratio have been observed in nuclei in the A = 150, 190, and the actinide regions. These states depopulate into normally deformed (ND) states by gamma decay, but so far the linking transitions have not been observed and the depopulation mechanism is not fully understood. Nuclei in different mass regions decay out at states with different spin (I), excitation energy above the ND yrast line (U) and lifetime (τ). This variation is due to differences in the nuclear properties such as the barrier penetration probability, the level densities and the gamma transition strength of SD and ND states. One important factor is the competition between the collective E2 decay along the SD band and the statistical decay to the ND states. These transition rates, or the partial lifetimes, can be determined if the lifetime and the intensity of the gamma rays depopulating the SD states are known.

32244 (CONF-920721–8) **The α-decay properties of light uranium isotopes.** Toth, K.S. (Oak Ridge National Lab., TN (United States)); Kim, H.J.; McConnell, J.W.; Bingham, C.R.; Sousa, D.C. Oak Ridge National Lab., TN (United States). [1992]. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400 ;FG05-87ER40361. Order Number DE92040024. Source: OSTI; NTIS; INIS; GPO Dep.

Using the picosecond lifetime system at UNISOR, we have measured the lifetimes for the first 2^+ levels in ^{118,120}Xe to be 64±4 ps and 63±6 ps, respectively. The resulting $B(E2;O_1{}^+ \rightarrow 2_1{}^+)$ value for ^{120}Xe of 1.79±11 e^2b^2 implies there is no saturation of B(E2) values at mid-shell in the Xe isotopes, as suggests from earlier lifetime measurements.

32246 (DOE/ER/40553–3) **Nuclear transparency and double beta decay of molybdenum 100: Annual progress report, March 1, 1992–January 31, 1993.** Nicholson, H.W. Mount Holyoke Coll., South Hadley, MA (United States). Aug 1992. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-90ER40553. Order Number DE92019519. Source: OSTI; NTIS; INIS; GPO Dep.

Data taking is now complete on a double beta decay experiment which has been carried out with collaborators from the Lawrence Berkeley Laboratory, the University of New Mexico, and the Idaho National Engineering Laboratory, and work is continuing on a second collaborative experiment, AGS experiment 850 at the Brookhaven National Laboratory to study nuclear color transparency. In March, the experimental apparatus used to search for double beta decay in molybdenum 100 in the Consil silver mine in Osburn, Idaho was dismantled, and the data analysis is in its final stages. No evidence has been seen for the $O^+ \rightarrow O^+$ mode of zero neutrino double beta decay collaborators with a 1σ lifetime limit of 3×10^{22} years. This limit is 7.5 times greater than the limit we published previously in Physical Review Letters in 1989. Backgrounds have been simulated and fits are currently underway to a simulated $O^+ \rightarrow 2^+$ mode of zero neutrino double beta decay to improve on a very preliminary 1σ lifetime limit of 2.3×10^{21} years presented at the April, 1992 meeting of the APS in Washington. A scintillating fiber detector with three Hamamatsu, H4140, 256 channel multianode phototubes has been built, instrumented, and tested in the May–July 1992 run in the EVA detector at Brookhaven Laboratory's AGS. Preliminary results from this detector have been disappointing. it is likely that the detector will have to be substantially redesigned before the 1993 AGS run.

32247 (GANIL-P–91-19) **Electromagnetic decay of two-phonon states.** Catara, F. (Istituto Nazionale di Fisica Nucleare, Catania (Italy)); Chomaz, Ph.; Van Giai, N. Grand Accelerateur National d'Ions Lourds (GANIL), 14 - Caen (France). 1991. 11p. Order Number DE92570072. Source: OSTI; NTIS (US Sales Only); INIS.

The electromagnetic decay of two-phonon states corresponding to the multi-excitation of giant resonances is studied. The calculations are performed within a boson expansion approach and the elementary modes are constructed in random phase approximation (RPA). The rates for direct transition of two-phonon states to the ground state turn out to be not negligibly smaller than those from the (single) giant resonances. The former transitions are accompanied by a γ-ray whose energy is equal to the sum of the two phonon energies. Thus the detection of such high energy γ-rays could provide a signature of the excitation of two-phonon states. (author) 9 refs., 3 tabs.

32248 (IPNO-DRE–91-10) **Fine structures in ^{14}C emission of ^{223}Ra and ^{224}Ra.** Hourani, E. (Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire); Rosier, L.; Berrier-Ronsin, G.; Elayi, A.; Mueller, A.C.; Rappenecker, G.; Rotbard, G.; Renou, G.; Liebe, A.; Stab, L.; Ravn, H.L. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1991. 30p. Order Number DE92570058. Source: OSTI; NTIS (US Sales Only); INIS.

The measurement of the energy spectrum of ^{14}C nuclei emitted in the spontaneous radioactivity from ^{223}Ra and ^{224}Ra has been carried out, using thin and intense sources (480 MBq for ^{223}Ra and 3550 MBq for ^{224}Ra). The sources were obtained by implanting mass-separated beams from ISOLDE (CERN) into Al and vitreous C catchers. The measurement was performed with the supraconducting solenoidal spectrometer SOLENO installed at Orsay. The discovery, of a fine structure in the energy spectrum of ^{14}C emission from ^{223}Ra, which is analogous to the one known for α emission, is confirmed. Only 13% of the branching ratio in ^{14}C decay leads to the ground state of the residual nucleus, while 81% to the first excited state. For ^{14}C emission of ^{224}Ra, a lower limit of 2 for the hindrance factor has been measured for the transition to the first excited state in the residual nucleus. Also, a precise identification in Z with a E·ΔE telescope has been performed for the radiation from the ^{223}Ra source. (author) 22 refs., 11 figs., 1 tab.

32249 (JINR-D–6-91-199) **Investigation of β-ν angular correlation in decay of ^{24}Na nuclei.** Egorov, V.G. (and others); Brudanin, V.B.; Vorobel, V. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Nuclear Problems. 1991. 16p. Order Number DE92645115. Source: OSTI; NTIS (US Sales Only); INIS.

The method and results of beta-neutrino angular correlation measurement in β decay of ^{24}Na nuclei are described. The method consists in the γ-energy Doppler shift determination, cascading γ-quanta being registered by Ge(Li) detector in coincidence with β particles at the angles of 0 deg and 180 deg. An upper limit on the Fermi impurity $(M_F)^2/(M_{GT})^2 \leq 0.25$ has been obtained. The model of recoil-ions slowing-down at recoil energies comparable with the binding energy in the crystal-lattice nod is developed. 37 refs.; 8 figs.; 2 tabs.

32250 (JINR-E–4-91-169) **Description of the Gamow-Teller β^+-decays and (n,p) transitions in spherical nuclei.** Kuz'min, V.A.; Solov'ev, V.G. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1991. 6p. Order Number DE92645116. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to Czech. J. PHys.

The results of calculation of the total log(ft)-quantities for decays of neutron-deficit nuclei and strength functions of (n,p) transitions are presented. It is shown that in spherical nuclei the $g_A/g_V \leq 1.0$ conditions fulfilled for the constants of a weak interaction. 17 refs.; 1 fig.; 2 tabs.

32251 (LA-UR–92-2268) **Radioactivities induced in some LDEF samples.** Reedy, R.C.; Moss, C.E.; Bobias, S.G.; Masarik, J. Los Alamos National Lab., NM (United States). [1992]. 12p. Sponsored by Department of Defense, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9206240–1: 2. LDEF post-retrieval symposium, San Diego, CA (United States), 1-5 Jun 1992). Order Number DE92018373. Source: OSTI; NTIS; GPO Dep.

Radioactivities induced in several LDEF samples were measured by low-level counting at Los Alamos and elsewhere. These radionuclides have activities similar to those observed in meteorites and lunar samples. Some trends were observed in these measurements in terms of profiles in trunnion layers and as a function of radionuclide half-life. Several existing computer codes were used to model the production by the protons trapped in the Earth's radiation belts and by the galactic cosmic rays of some of these radionuclides, ^{54}Mn and ^{57}Co in steel, ^{46}Sc in titanium, and ^{22}Na in alloys of titanium and aluminum. Production rates were also calculated for radionuclides possibly implanted in LDEF, ^{7}Be, ^{10}Be, and ^{14} C. Enhanced concentrations of induced isotopes in the surfaces of trunnion sections relative to their concentrations in the center are caused by the lower-energy protons in the trapped radiation. Secondary neutrons made by high-energy trapped protons and by galactic cosmic rays produce much of the observed radioactivities, especially deep in an object. Comparisons of the observed to calculated activities of several radionuclides with different half-lives indicate that the flux of trapped protons at LDEF decreased significantly at the end of the mission.

An influence of the finite size effect on the fragment-size correlations in the nuclear multifragmentation is studied using the method of scaled factorial moments for a 1 - dim percolation model and for a statistical model of the fragmentation process, which for a certain value of a tuning parameter yields the power-law behaviour of the fragment-size distribution. It is shown that the statistical models of this type contain only repulsive correlations due to the conservation laws. The comparison of the results with those obtained in the non-critical 1 - dim percolation and in the 3 - dim percolation at around the critical point is presented. Correlations in the 1 - dim percolation model are analysed analytically and the mechanism of the attractive correlations in 1 - dim and 3 - dim is identified. (author) 30 refs., 7 figs.

The production of photons in heavy ion collisions is considered. As their experience only the weak and electromagnetic interactions, they transmit an undistorted view of the collision zone. The goal of the present work is to measure the extent of this zone. This is done in an interferometry experiment where photons emitted from a chaotic source generate a correlation pattern related to the source size. (K.A.) 6 refs., 7 figs.

We use the formalism of Feynman diagrams to describe the charge-exchange reactions (p,n), (n,p) and (^{3}H e,t) on a free proton target taking into account spectator and decay modes in the $\pi + \rho +$ g'-model. The type of interference between these modes depends on the set of vertex function parameters used. It is shown that discrete ambiguities exist for the $\pi N\Delta$ and $\rho N\Delta$ vertex functions. These are partly resolved if charge-exchange data for a wide energy range is used. (orig.).

32259 (IPNO–1990/1) **Proceedings of the Workshop on future of nuclear physics in Europe with polarized electrons and photons.** Didelez, J.P. (ed.) (Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire); Tamas, G. (ed.). Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1990. 205p. (CONF-900726–: 7. international conference on polarization phenomena in nuclear physics, Paris (France), 4-13 Jul 1990). Order Number DE92570037. Source: OSTI; NTIS (US Sales Only); INIS.

In the proceedings of the workshop, held at the Institut de Physique Nucleaire in Orsay, France, full texts of 20 contributions are presented. The two main topics were polarized electrons and polarized photons. It has been reported that significant processes have been made recently in the science and technology of polarized electron sources, polarized targets and polarimeters. The relevant tools are therefore now available to complete extensive experimental programs. The 20 papers are indexed and abstracted separately for the INIS database. (R.P.).

32260 (IPNO–1990/1, pp. 1-12) **Nucleon form factors.** Jourdan, J. (Basel Univ. (Switzerland). Inst. fuer Physik). Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1990. (CONF-900726–: 7. international conference on polarization phenomena in nuclear physics, Paris (France), 4-13 Jul 1990). In *Proceedings of the Workshop on future of nuclear physics in Europe with polarized electrons and photons.* 205p. Order Number DE92570037. Source: OSTI; NTIS (US Sales Only); INIS.

The electromagnetic form factors of the nucleon are fundamental quantities relevant for an understanding of both nucleon and nuclear structure. Some of the form factors, in particular the neutron charge and magnetic form factors are known with comparatively poor accuracy due to both experimental systematical errors and the exploration of observable sensitive to uncertainties in the theoretical description. The proposed approaches for the future, using polarized electrons promise an order-of-magnitude type improvement. (author) 32 refs., 5 figs.

Inst. fuer Kernphysik); Ertel, M.; Eyl, D.; Frey, A.; Klein, F.; Loos, R.; Rieger, R.; Schmieden, H.; Sprenger, M.; Steffens, K.H.; Steinel, A.; Straub, M.; Walcher, Th.; Welling, M.; Annand, J.; Hall, S.; Miller, G.; OA3 Collaboration. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1990. (CONF-900726–: 7. international conference on polarization phenomena in nuclear physics, Paris (France), 4-13 Jul 1990). In *Proceedings of the Workshop on future of nuclear physics in Europe with polarized electrons and photons.* 205p. Order Number DE92570037. Source: OSTI; NTIS (US Sales Only); INIS.

The advent of high duty cycle machines has opened up the area of coincidence experiments, both in and out-of-plane, allowing the measurement of four exclusive structure functions with a corresponding gain of information. MAMI B has successfully produced a 855 MeV electron beam in august 1990. The first two polarization experiments will be devoted to the measurement of the electric formfactor $G_{E,n}$ of the neutron in a range of momentum transfer $Q^2 = 5 - 15\ fm^{-2}$ using $^2D(e,e'n)$ and $^3H\ e(e,e'n)$. The necessary e-source, spin rotator, e-polarimeter, ^3H e-target and n-polarimeter are under construction. (author) 14 refs., 1 fig., 1 tab.

32262 (IPNO–1990/1, pp. 22-29) **Study of few-body systems using recoil detection.** Blok, H.P. (Vrije Univ., Amsterdam (NL). Dept. of Physics and Astronomy). Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1990. (CONF-900726–: 7. international conference on polarization phenomena in nuclear physics, Paris (France), 4-13 Jul 1990). In *Proceedings of the Workshop on future of nuclear physics in Europe with polarized electrons and photons.* 205p. Order Number DE92570037. Source: OSTI; NTIS (US Sales Only); INIS.

The possibilities of recoil detection for some interesting physics questions are discussed, and some examples are presented. After the description of recoil detectors for the detection of p, d, t, ^3He and ^4He particles to study $^4He(e,e'n)^3He$ type reactions, some particular experiments including the (virtual) photon-neutron coupling, two-nucleon knockout, electro-pion production and polarization studies are presented. (R.P.) 12 refs., 6 figs.

32263 (IPNO–1990/1, pp. 31-43) **Measurement of spin-dependent electron scattering from a polarized ^3He internal target.** Brand, J.F.J. van den (Massachusetts Inst. of Tech., Cambridge, MA (United States). Dept. of Physics). Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1990. (CONF-900726–: 7. international conference on polarization phenomena in nuclear physics, Paris (France), 4-13 Jul 1990). In *Proceedings of the Workshop on future of nuclear physics in Europe with polarized electrons and photons.* 205p. Order Number DE92570037. Source: OSTI; NTIS (US Sales Only); INIS.

A polarized electromagnetic physics experiment is described, using the option of polarized internal gas target in electron storage rings. The electromagnetic response of the ^3He nucleus was measured, and the three-body system was used for theoretical calculations. The technical aspects of the measurement, and the various asymmetries obtained in inclusive and exclusive experiments are discussed. The emphasis is placed on the sensitivity of the measured asymmetries. (R.P.) 16 refs., 5 figs., 2 tabs.

32264 (IPNO–1990/1, pp. 44-52) **Nucleon recoil polarization in quasi-elastic electron scattering with two-body currents.** Boffi, S. (Pavia Univ. (IT). Dipt. di Fisica Nucleare a Teorica); Giusti, C.; Pacati, F.D.; Radici, M. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1990. (CONF-900726–: 7. international conference on polarization phenomena in nuclear physics, Paris (France), 4-13 Jul 1990). In *Proceedings of the Workshop on future of nuclear physics in Europe with polarized electrons and photons.* 205p. Order Number DE92570037. Source: OSTI; NTIS (US Sales Only); INIS.

The nucleon recoil polarization is considered in (e,e'N) reactions with polarized electrons. The theoretical framework is based on the one-photon exchange approximation, with an the electromagnetic current of the target nucleus built with one- and two-body contributions coming from meson-exchange currents and isobar configurations in intermediate nuclear states. Specific calculations are presented for the different structure functions, the polarization and the transfer polarization coefficient of both the proton and the neutron knockout. The ^{16}O target nucleus is taken as an example to set the scale for possible experiments. The sensitivity to final state interactions, mesonic effects and isobaric configurations is discussed. (author) 19 refs., 4 figs.

32265 (IPNO–1990/1, pp. 53-57) **Spin correlations in photo- and electro-disintegration of the few-body systems.** Laget, J.M. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (FR). Service d'Experimentation en Physique Nucleaire). Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1990. (CONF-900726–: 7. international conference on polarization phenomena in nuclear physics, Paris (France), 4-13 Jul 1990). In *Proceedings of the Workshop on future of nuclear physics in Europe with polarized electrons and photons.* 205p. Order Number DE92570037. Source: OSTI; NTIS (US Sales Only); INIS.

Very few results exist in the study of spin observables with electromagnetic probes, contrary to hadronic probes. Recent progress in handling polarized beams of electrons and photons allow to undertake the systematic study of the spin observables in hadronic matter. Spin can be used to select the part of the cross-section which is directly proportional to the interference between the Coulomb and the transverse part of the transition amplitude. The main axes are given. (R.P.) 4 refs., 2 tabs.

32266 (IPNO–1990/1, pp. 149-166) **Tagged photon beams obtained by laser Compton scattering on electron beams.** D'Angelo, A. (Rome Univ. (Italy)). LADON Collaboration. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1990. (CONF-900726–: 7. international conference on polarization phenomena in nuclear physics, Paris (France), 4-13 Jul 1990). In *Proceedings of the Workshop on future of nuclear physics in Europe with polarized electrons and photons.* 205p. Order Number DE92570037. Source: OSTI; NTIS (US Sales Only); INIS.

The back-scattering of laser light against the high energy electrons circulating in storage rings produces fully polarized γ-ray beams, with energies and resolutions useful for the study of photonuclear reactions. This technique is being used in Frascati, where a tagged beam with a maximum energy of 80 MeV has been produced, and at Brookhaven, where the beam has a maximum energy of 300 MeV and an intensity of 10^6+10^7 γ/s. We also present a project which is underway to produce a similar beam in the ESRF at Grenoble, with a maximum energy of 1.5 GeV. Some possible experiments using this new beam are indicated. (author) 9 refs., 18 figs., 5 tabs.

32267 (IPNO–1990/1, pp. 187-192) **Measuring the Drell-Hearn-Gerasimov sum-rule.** Botton, N. de (European Organization for Nuclear Research, Geneva (Switzerland)); d'Hose, N. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1990. (CONF-900726–: 7. international conference on polarization phenomena in nuclear physics, Paris (France), 4-13 Jul 1990). In *Proceedings of the Workshop on future of nuclear physics in Europe with polarized electrons and photons.* 205p. Order Number DE92570037. Source: OSTI; NTIS (US Sales Only); INIS.

The Drell-Hearn-Gerasimov (DHG) sum rule deals with the process of absorption of circularly polarized photons by longitudinally polarized nucleons. An experiment is described briefly for the measurement of the DHG sum rule using existing techniques. Two possibilities are available for producing circularly polarized photons were produced. The DHG integral value could be measured on protons in the energy range from pion photoproduction threshold to 1.5 GeV. (R.P.) 11 refs., 2 figs.

32268 (ISN–91-05) **Measurement and analysis of charge partitions in nuclear disassembly.** Desesquelles, P. (Grenoble-1 Univ., 38 (France). Inst. des Sciences Nucleaires); Cole, A.J.; Giorni, A.; Heuer, D.; Lleres, A.; Morand, C.; Stassi, P.; Viano, J.B.; Chambon, B.; Cheynis, B.; Drain, D.; Pastor, C. Grenoble-1 Univ., 38 (France). Inst. des Sciences Nucleaires. 1991. 9p. (CONF-910111–: 29. international winter meeting on nuclear physics, Bormio (Italy), 14-25 Jan 1991). Order Number DE92570110. Source: OSTI; NTIS (US Sales Only); INIS.

Analysis of charge partitions for a total measured charge of 20 detected at forward angles by the AMPHORA multidetector in the reaction ^{40}Ca+^{nat}Cu at 35 MeV/nucleon provides strong evidence for an initial equilibrium state. The probability of observing a partition is well described in terms of a multinomial formula whose parameters are strongly correlated with the mass excesses of individual members. A similar result is obtained for partitions of charge 8 from the reaction ^{16}O+^{9}Be at 32.5 MeV/nucleon. (author) 9 refs., 4 figs.

32269 (LA–12343-MS) **Comprehensive nuclear model calculations: Introduction to the theory and use of the GNASH code.** Young, P.G.; Arthur, E.D; Chadwick, M.B. Los Alamos National Lab., NM (United States). Jul 1992. 158p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. Order Number DE92019467. Source: OSTI; NTIS; INIS; GPO Dep.

A user's manual describing the theory and operation of the GNASH nuclear reaction computer code is presented. This work is based on a series of lectures describing the statistical Hauser-Feshbach plus preequilibrium version of the code with full angular momentum conservation. This version is expected to be most applicable for incident particle energies between 1 kev and 50 MeV. General features of the code, the nuclear models that are utilized, input parameters needed to perform calculations, and the output quantities from typical problems are described in detail. The computational structure of the code and the subroutines and functions that are called are summarized as well. Two detailed examples are considered: 14-MeV neutrons incident on ^{93}Nb and 12-MeV neutrons incident on ^{238}U. The former example illustrates a typical calculation aimed at determining neutron, proton, and alpha emission spectra from 14-MeV reactions, and the latter example demonstrates use of the fission model in GNASH.

32270 (OUP–92-08) **Isobar contributions to the imaginary part of the optical-model potential for finite nuclei.** Hjort-Jensen, M. (Tuebingen Univ. (Germany)); Borromeo, M.; Muether, H.; Polls, A. Oslo Univ. (Norway). Fysisk Inst. Mar 1992. 34p. Order Number DE92645139. Source: OSTI; NTIS; INIS.

A recently developed non-relativistic method for calculating the nucleon optical-model potential has been employed to evaluate the contributions from isobaric degrees of freedom to the imaginary part of the nucleon optical-model potential. To evaluate the imaginary part of the optical-model potential, the authors include the contributions from terms to second order in the Brueckner G-matrix with and without the inclusion of isobars Δ. Results for ^{16}O are presented in this work. The contributions to the imaginary part are given by the two-particle-one-hole (2p1h) and three-particle-two-hole (3p2h) diagrams. The latter contributes at negative energies only and the contribution from isobar intermediate states is rather small. The 2p1h receives significant contributions from isobars at energies near the resonance and above the threshold for the excitation of $\Delta\Delta$ states. In particular, the importance of $\Delta\Delta$ configurations is rather sensitive to the treatment of short-range correlations. The parameterization of the self-energy in terms of local potentials is discussed. The depletion of the occupation of the single-particle orbits due to nucleon-nucleon correlations and Δ excitations is evaluated. 49 refs., 14 figs., 3 tabs.

The spherical optical-statistical model is briefly reviewed and the capabilities of the neutron scattering code, ABAREX, are presented. Input files for ten examples, in which neutrons are scattered by various nuclei, are given and the output of each run is discussed in detail.

32272 (ANL/CP–76820) **A pocketful of tin isomers from heavy-ion collisions.** Daly, P.J. (Purdue Univ., Lafayette, IN

(United States)); Broda, R.; Fornal, B.; Mayer, R.H.; Nisius, D.; Bearden, I.; Benet, P.; Grabowski, Z.W.; Lauritsen, T.; Carpenter, M.; Janssens, R.V.F.; Khoo, T.L.; Liang, Y.; Lunardi, S.; Blomqvist, J. Argonne National Lab., IL (United States). [1992]. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38 ;FG02-87ER40346. (CONF-920555–2: 4. international spring seminar on nuclear physics: the building blocks of nuclear structure, Amalfi (Italy), 18-22 May 1992). Order Number DE92019674. Source: OSTI; NTIS; INIS; GPO Dep.

Reaction products of ^{122,124}Sn + ^{76}Ge(^{80}Se) collisions 10–15% above the barrier have been studied by γ-ray spectroscopy, and new yrast isomers in $^{119--124}$Sn isotopes have been identified and characterized. B(E2) values determined for $(\nu h_{11/2})^n$ $10^+ \rightarrow 8^+$ transitions in even-A Sn nuclei pinpoint half-filling of the $\nu h_{11/2}$ subshell close to N = 73. In odd-A Sn isotopes, $19/2^+$ isomers with 1–10 μs half-lives occur systematically, and higher-lying $(\nu h_{11/2})^n v=3$ $27/2^-$ isomers in ^{119}Sn and ^{121}Sn have also been identified. These deep inelastic excitation processes were found to populate a large number of neutron-rich nuclei strongly enough for yrast spectroscopy studies.

32273 (BNL–47764) **The K$^+$ as a probe of nuclear medium effects.** Chrien, R.E. Brookhaven National Lab., Upton, NY (United States). [1992]. 18p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. (CONF-9205238–2: Workshop on strangeness in nuclei, Krakow (Poland), 5-7 May 1992). Order Number DE92019236. Source: OSTI; NTIS; INIS; GPO Dep.

The study of the K+ total cross sections on a wide range of nuclei has revealed important modifications of the free-space K+ - nucleon interaction when the nucleon is embedded in a nucleus. In addition to the previously published data on carbon and deuterium we report here the extension of such measurements to lithium, silicon, and calcium. We demonstrate that the previous reported medium modifications for carbon occur quite generally. The results are discussed as evidence for partial quark deconfinement at nuclear densities.

32274 (BNL–47765) **Two-nucleon production of hyperons in an S = −1 dibaryon search.** Chrien, R.E. E820 Collaboration. Brookhaven National Lab., Upton, NY (United States). [1992]. 18p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. (CONF-9205238–1: Workshop on strangeness in nuclei, Krakow (Poland), 5-7 May 1992). Order Number DE92019219. Source: OSTI; NTIS; INIS; GPO Dep.

The double-charge-exchange reaction ^{3}He(K^-, π^+)Xn was studied at p_{K^-} = 870 MeV/c. In the missing mass range below the sigma-nucleon production threshold (3075 MeV/c^2) events were detected and attributed to the two-nucleon reaction pp(K^-, π^+)Λn. This reaction and mass range is supposed to be a fertile field for a search for the I = 1/2, L = 1 ($^1P_1$) spin-singlet dibaryon suggested as the lowest mass S = −1 dibaryon of bag model predictions. We find no need to invoke such an object to account for the observed events below Σ production threshold.

32275 (CEA-CONF–10850) **Dione status report.** Courtois, A.; Faure, J.; Gobin, R.; Leroy, P.A.; Visentin, B.; Zupranski, P. Laboratoire National Saturne - Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). 1991. 3p. (CONF-9109420–: 4. International Meeting on the Ion Sources, Darmstadt (Germany), 30 Sep - 4 oct 1991). Order Number DE92566700. Source: OSTI; NTIS (US Sales Only); INIS.

The SATURNE synchrotron facility is equipped with an EBIS source for heavy ion nuclear-physics experiments. SATURNE is accelerating either conventional heavy ions as Kr^{30+} or polarized ^{6}Li^{3+} produced in 2 external ion sources, injected and stripped inside DIONE. In this report, the DIONE last performances will be given and recent developments as well: evaporative cooling experiments and the main options for a new EBIS project: RHEA.

32276 (CONF-9106158–1) **Orbiting: toward a unified model of nucleus-nucleus collision or excitation of nuclear molecular states in heavy ion collisions?.** Ray, A.; Shapira, D. Oak Ridge National Lab., TN (United States). [1991]. 3p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. In the late sixties, Strutinsky's theoretical work on the structure of the fission barrier, together with some new neutron cross section measurements performed at Saclay and Gel, called Gerard deSaussure's attention, who immediately recognized the importance of those developments. Indeed, deSaussure was quick in noting that for neutron energies in the range of the fission barrier potential energy, fission cross-section measurements would yield direct information about the physical properties of the fission barrier. Under his leadership, a set of extensive and precise measurements were performed at the Oak Ridge Electron Linear Accelerator by an international group of researches, lasting over two decades. Those measurement were unique in many respects: fission widths were determined for many previously unreported resonances, in the subthreshold region and a detailed study was performed on the physical properties of the fission barrier at high nuclear deformation. In this paper, we would like to report a specific part of the extensive involvement of deSaussure in the area of subthreshold fission physics: the one pertaining to the 1979 measurement of the ^{28}U(n,f) cross section in the subthreshold and near-subthreshold regions. This cross section was measured in the energy region between 5 eV and 3.5 Mev using a large fission chamber loaded with high purity ^{238}U, which had less than 2 ppm of ^{235}U.

32278 (CONF-921144–1) **Experimental challenges at RHIC and LHC.** Young, G.R. Oak Ridge National Lab., TN (United States). Mar 1992. 13p. Sponsored by USDOE, Washington, DC (United States). A full statistical analysis has been given in terms of the Extended Hauser-Feshbach method. The charge and kinetic energy distributions of ^{35}Cl+^{12}C reaction at E_{lab} = 180, 200 MeV and ^{23}Na+^{24}Mg reaction at E_{lab} = 89 MeV which form the ^{47}V compound nucleus are investigated as a prototype of the light mass system. The measured kinetic energy distributions of the complex fragments are shown to be well reproduced by the Extended Hauser-Feshbach method, so the observed complex fragment production is understood as the statistical binary decay from the compound nucleus induced by heavy-ion reaction. Next, this method is applied to the study of the complex production from the ^{111}In compound nucleus which is formed by the ^{84}Kr+^{27}Al reaction at E_{lab} = 890 MeV. (K.A.) 18 refs., 10 figs.

Centre de Recherches Nucleaires. 1991. 29p. Order Number DE92570102. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to Nucl. Phys. (US).

Triple and four-fold coincidences among fragments have been measured in the reaction ^{197}Au(^{84}Kr,X) at 43 MeV/u. All events showing the projectile-like nucleus and fission fragments of the target-like nucleus, and all events with one additional intermediate velocity fragment, were analysed in the frame of a dissipative collision and a participant-spectator model. The mechanism is basically that of a dissipative collision but the emission of the intermediate velocity fragment by the target differs from an equilibrated evaporation. (author) 16 refs., 10 figs.

The overall goal of this project is to study nucleus-nucleus collisions experimentally at intermediate and relativistic energies, with emphasis on measurement and interpretation of correlation effects that provide insight into the nuclear phase diagram and the nuclear equation of state. During the past year, the PI has been on leave at Lawrence Berkeley Lab and has worked on this research project full-time. A large fraction of the effort of the PI and graduate students has gone into preparing for experiments using the Time Projection Chamber at LBL's Bevalac accelerator; in March 1992, this device successfully took data in production mode for the first time, and the first physics analysis is now under way. The PI has carried out simulations that help to define the physics performance and engineering specifications of the recently-approved STAR detector for the Relativistic Heavy Ion Collider, and has identified a new capability of this device with the potential for being an important quark-gluon plasma signature. A Postdoctoral Fellow, jointly supported by this grant and Kent State University, has been recruited to augment these efforts. Since May 1991, 11 journal papers have been published or submitted for publication; 2 conference proceedings and 9 reports or abstracts have also been published during the past year. One paper in Phys. Rev. Left., one in Phys. Rev. C, and one conference proceedings are based on the thesis project of one of the PI's Ph.D. students who is expected to graduate later this year. Partly in response to the impending closure of the Bevalac, the PI's group has recently joined the NA49 experiment at CERN.

32282 (ECN-RX–91-046) **The EFF-2 evaluation for the reaction systems n + ^{52}Cr, ^{56}Fe, ^{58}Ni and ^{60}Ni: Presented at the International Conference on Nuclear Data for Science and Technology, Juelich, Federal Republic of Germany, 13-17 May 1991.** Uhl, M. (Vienna Univ. (Austria). Inst. fuer Radiumforschung und Kernphysik); Gruppelaar, H.; Kamp, H.A.J. van der; Kopecky, J.; Nierop, D. Netherlands Energy Research Foundation (ECN), Petten (Netherlands). May 1991. 12p. (CONF-910503–: International conference on nuclear data for science and technology, Juelich (Germany), 13-17 May 1991). Order Number DE93602821. Source: OSTI; NTIS; INIS.

The evaluated cross sections for incident energies between 1 and 20 MeV are essentially based on nuclear reaction model calculations. Model parameters were chosen so as to simultaneously reproduce many available experimental data. At low energies the cross sections were taken from other evaluations. Calculations consider the spherical optical model, the statistical compound nucleus model under consideration of angular momentum and parity, the exciton model for first change pre-equilibrium emission of particles and photons and a direct reaction model for in-elastic scattering. The exciton model employed accounted for angular momentum conservation. For each reaction system evaluation comprises the following cross sections: total, elastic, production of light reaction products (photons, neutrons, protons and alphas) and production of heavy reaction products (about 10 residual nuclei for each target). Furthermore included are the energy-angle distributions of the light reaction products and of the heavy reaction products (i.e. the double differential recoil spectra). (author). 34 refs.; 4 figs.

32283 (ECN-RX–91-051) **The pre-equilibrium picture of nucleon radiative capture and the neutron-to-gamma competition: Presented at the International Conference on Nuclear Data for Science and Technology, Juelich, Federal Republic of Germany, 13-17 May 1991.** Betak, E. (Slovenska Akademia Vied, Bratislava (Czechoslovakia). Fyzikalny Ustav); Cvelbar, F.; Kopecky, J. Netherlands Energy Research Foundation (ECN), Petten (Netherlands). May 1991. 12p. (CONF-910503–: International conference on nuclear data for science and technology, Juelich (Germany), 13-17 May 1991). Order Number DE93602786. Source: OSTI; NTIS; INIS.

The pre-equilibrium (exciton) model is used to describe the continuous γ spectra as well as both the activation (σ_{act}) and the integrated (σ_{int}) cross sections (and their excitation functions) of the radiative capture of nucleons with energies ranging from 0 up to 80 MeV. The γ cascades are taken fully into account to evaluate properly σ_{act} (and its distinction with respect to σ_{int}). The calculations do not contain any free parameters for the γ emission. Comparison to available experimental data demonstrates clearly the necessity to include properly the level density parameters for individual nuclei. The low-energy behaviour of the proton radiative capture excitation functions supports the use of energy-dependent GDR width, which are employed in the generalized Lorentzian. (author). 14 refs.; 4 figs.

32284 (ECN-RX–91-061) **International evaluation cooperation task 1.1 : Intercomparison of evaluated files for ^{52}Cr, ^{56}Fe, and ^{58}Ni: Presented at the International Conference on Nuclear Data for Science and Technology, Juelich, Federal Republic of Germany, 13-17 May 1991.** Fu, C.Y. (Oak Ridge National Lab., TN (United States)); Larson, D.C.; Hetrick, D.M.; Vonach, H.; Kopecky, J.; Iijima, S.; Yamamuro, N.; Maino, G. Netherlands Energy Research Foundation (ECN), Petten (Netherlands). Jun 1991. 5p. (CONF-910503–: International conference on nuclear data for science and technology, Juelich (Germany), 13-17 May 1991). Order Number DE93602787. Source: OSTI; NTIS; INIS.

The cross sections and energy and angular distributions in the JENDL-3, JEF-2/EFF-2 and ENDF/B-VI evaluations for ^{52}Cr, ^{56}Fe and ^{58}Ni are compared graphically. The purpose is to understand the reasons for observed discrepancies among the evaluations, and to suggest recommendations for improvements. The accomplishments to date are presented. (author). 9 refs.; 3 figs.

In this note we briefly review the current situation of thermal photon emission from a hot plasma and/or hadronic gas. The study of real or virtual photons emitted from the (hopefully) formed quark-gluon plasma (QGP) in nucleus-nucleus collisions at very high energy (RHIC, LHC) provides the only direct access to the hot initial phase of the collision, before hadronization takes places. In order to shed light on the question of whether and how directly produced real photons can be measured we will provide estimates for the ratio γ/πdeg as a function of the transverse momentum p_t for the case of Au+Au collisions at RHIC. For such estimates one needs both a scenario for the plasma and the phase transition as well as a description of the expected hadron spectra after freeze-out. In addition to calculations of photon emission from a plasma and mixed phase we will use present information on hadron spectra in pp collisions and appropriate scaling laws to estimate the shape of the πdeg spectrum in Au+Au collisions at RHIC. (orig.).

Last year our collaboration has performed several experiments at SIS, GSI Darmstadt, using Au beams between 100 and 800A MeV incident on Au targets. One of the main aims was to study cluster production in central collisions. Clusters (defined here as fragments with nuclear charge $Z > 2$), consisting of several nucleons traveling with a common velocity, should be a more sensitive probe of global flow than single hadrons would be. Flow properties, on the other hand. are believed to be influenced by the equation of state (EOS) of nuclear matter, it is also hoped that cluster distributions, or rather fluctuations thereof, may give signals of liquid-vapor phase transitions. Even before investigation these remote goals, one might simply ask if clusters are 'paricipating' members of the dynamics (compression-expansion) and hence influencing it, or whether they are just formed at a late stage by simple coalescence, or even if they are just 'spectator' remnants. (orig.).

We have studied the fragmentation of Au projectiles interacting with targets of C, Al, Cu and Pb at an incident energy of $E/A = 600$ MeV. The experiment was performed with the ALADIN forward spectrometer at SIS. The employed inverse kinemantics allowed nearly complete detection of projectile fragments with charge $Z \geq 2$. In addition the number of light particles for each collision was measured. We compare different observables characterizing the event and investigate the impact parameter dependence of the fragmentation process. It is found that the correlation between the multiplicity of intermediate mass fragments $< M_{imf} ><$ and Z_{bound}, the sum charges of all projectile fragments with $Z \geq 2$, is independent of the target nucleus. This universal behavior is consistent with an - at least partial - equilibration of the projectile fragment prior to its decay. Finally we compare with two classes of statistical models, the sequential decay code GEMINI and statistical multifragmentation models as well as with QMD calculations. (orig.).

We study the effect of many-body collisions in simulations of nuclear dynamics. First the collision integral in the BUU model is generalized to include many-body collisions. We study a variety of experimental observables, for the case of Ca+ Ca at bombarding energies of 200-1000 MeV per nucleon, such as anisotropy, flow angle and sidewards momentum. The treatment is subsequently extended to include particle production and the production of kaons is especially considered. Overall, the results of the standard BUU model are affected relatively little by the incorporation of N-body collisions. (orig.).

The kinetic model developed previously for soft hadron-nucleus and nucleus-nucleus collisions has been extended to describe low mass dilepton production. A version of the quark-gluon string model is used to get an input information on unstable particles produced in hadron-hadron collisions. Taking into account a variety of e^+e^- sources, a fairly good description of available experimental data on dileptons created in both, p + Be collisions from 12 to 1 GeV and Ca+Ca collisons at the energies 2 and 1 GeV/nucleon, is attained. Confirming a previous estimate of the $\pi\pi$ annihilation process, it has been found that the $\omega/\rho \to e^+e^-$ decay contributes as much as $\pi\pi$ annihilation does and into the same region of invariant masses, even for Ca+Ca (1 GeV/nucleon) collisions. The implications of a finite positive pionic chemical potential for the production rate of lepton pairs in relativistic heavy ion collisions are discussed. In paritcular, $\mu^+\mu^-$-pairs with small invariant masses turn out to be strongly enhanced. (orig.).

Neglecting the mean field effects we solve the bosonic Boltzmann equation for an expanding gas of pions using the in-medium scattering matrix from a Bethe-Goldstone type equation. The increase of the scattering rate in the gas for large final state Bose occupancy factors is nearly compensated by an overall drop of the in-medium cross section. Investigating the effect of the $\pi\pi$ scattering in thermalizing the momentum distribution small values of the hadronization time are needed to obtain a strong enhancement at low pperpendicular to. 32308 (IPNO–1990/1, pp. 95-106) **Polarization observables in meson photoproduction.** Bennhold, C. (Mainz Univ. (Germany). Inst. fuer Kernphysik). Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1990. (CONF-900726–: 7. international conference on polarization phenomena in nuclear physics, Paris (France), 4-13 Jul 1990). In *Proceedings of the Workshop on future of nuclear physics in Europe with polarized electrons and photons.* 205p. Order Number DE92570037. Source: OSTI; NTIS (US Sales Only); INIS.

Polarization observables in the photoproduction of pseudoscalar mesons are discussed. Particularly, those single and double polarization observables are analyzed which the best suited might be to advance the knowledge of elementary photoproduction of pions, kaons and etas. For pion photoproduction the process $\gamma p \rightarrow \pi^P$, for eta photoproduction the reaction $\gamma p \rightarrow \eta p$, and for kaon photoproduction the process $\gamma p \rightarrow K^+\Lambda$ was considered with polarization observables. (R.P.) 12 refs., 6 figs., 2 tabs.

The cross-section asymmetry Σ of the deuteron photodisintegration process $d(\gamma,pn)$ has been measured in the energy range 0.3-1.0 GeV for proton cm angles 45, 60, 75 and 90 deg. The data obtained are compared with predictions of the existing theoretical models, based on the conventional approach as well as with the results of Kharkov multipole analysis which takes into account the contribution of dibaryon resonances. Neither of these theoretical models describe the experimental data satisfactorily. (author) 16 refs., 6 figs., 1 tab.

Investigations using monoenergetic photons up to 1.5 GeV allow to span the energy interval where nucleon resonances are excited. Some examples of experiments with polarized photons are presented. The photon-proton elastic scattering in the Δ-region is discussed for studying the Δ quadrupole excitation. The deuteron photodisintegration is briefly reviewed. Finally, the two-nucleon photoemission is proposed as a tool for the investigation of nucleon-nucleon correlations. (author) 34 refs., 13 figs., 1 tab.

32313 (IPNO-DRE–91-13) **Dynamics and thermalization in violent collisions between ^{40}Ar and Ag at 27 MeV/nucleon.** Jouan, D. (Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire); Borderie, B.; Rivet, M.F.; Cabot, C.; Gauvin, H.; Gardes, D.; Fuchs, H.; Gregoire, C.; Hanappe, F.; Montoya, M.; Remaud, B. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1991. 52p. Order Number DE92570059. Source: OSTI; NTIS (US Sales Only); INIS; Submitted to Z. Phys., A (DE).

For the violent collisions of 27 MeV/nucleon ^{40}Ar with Ag, coincidence measurements have been made between heavy residues and intermediate mass fragments ($3 \leq Z \leq 14$) or light charged particles. Main characteristics of the dominant mechanisms, fusion and partially damped collisions preceded or accompanied by a preequilibrium emission, are presented. Balances concerning mean values of parallel linear momentum, mass and atomic number, are established and confirm that a complete description of violent collisions was obtained. Then, thermalization is discussed, in terms of excitation energies derived from kinematics between heavy residues and intermediate mass fragments, and in terms of initial temperature estimates derived from light charged particle spectra. Very hot nuclei ($T \simeq 5.7$ - 6.6 MeV) are produced over a large impact parameter range from very central collisions to medium peripheral ones. From the good agreement between experimental results and predictions obtained with semi-classical calculations (Landau-Vlasov equation), one may conclude that, depending on the impact parameter, thermal equilibrium is achieved within 4-10×10^{-22} s. (author) 45 refs., 19 figs., 6 tabs.

32314 (IPNO-DRE–91-17) **A signature for isoscalar-spin transitions in (d,d') scattering at intermediate energy.** Morlet, M. (Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire); Bimbot, L.; Guillot, J.; Johnson, B.N.; Jourdan, F.; Langevin-Joliot, H.; Marty, N.; Rosier, L.; Wiele, J. van de; Willis, A.; Baker, F.T.; Beatty, D.; Edwards, G.; Fergerson, RParis-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. May 1991. 11p. Order Number DE92570061. Source: OSTI; NTIS (US Sales Only); INIS.

Three different signatures for isoscalar spin transitions in nuclei have been tested in the $^{12}C(d,d')^{12}C$ reaction at 400 MeV. These signatures have values close to zero for the natural parity states, and range from 0.22 to 0.50 for the $\Delta S=1$ $\Delta T=0$, 12.7 MeV state. Preliminary results on $^{40}Ca(d,d')$ at 400 MeV are also presented. (author) 26 refs., 4 figs., 1 tab.

32315 (IPNO-DRE–91-18) **Experimental searches for narrow dibaryons.** Tatischeff, B.; Comets, M.P.; Bornec, Y. Le; Willis, N. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1991. 14p. (CONF-9106389–: International workshop on investigation of deuteron structure at high energy physics, Dubna (USSR), 11-13 Jun 1991). Order Number DE92570062. Source: OSTI; NTIS (US Sales Only); INIS.

A few topics of narrow structures in nuclear physics at excitation energies of several hundred MeV are overviewed. Among these topics, the physics of dibaryons is particularly interesting since if narrow structures are observed, they can be related to precursor partial quark deconfinement. This possibility simulated the large number of data corresponding to such studies. A brief literature survey of these studies is given. The studies and recent data included in this overview are: analyzing powers in nucleon-nucleon elastic scattering, the $p(d,pp)X$ reaction (X being the two proton missing masses), the $^{2}H(p,n)X^{++}$ reaction, and dibaryon searches from photonuclear reactions. (R.P.) 39 refs., 6 figs.

32316 (IPNO-DRE–91-20) **Giant resonances and multiphonons states in heavy ion reactions.** Frascaria, N. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1991. 15p. (CONF-9106336–: 6. international conference on nuclear reactions mechanisms, Varenne (Italy), 10-15 Jun 1991). Order Number DE92570064. Source: OSTI; NTIS (US Sales Only); INIS.

The use of heavy ion probes for the study of excitation and decay of giant resonances is discussed. Heavy ions are shown to excite giant resonances with large cross section and peak to background ratios. A wealth of information can be extracted from fragment-particle coincidence experiments, both on the reaction mechanism and the nature of the excited resonances. Finally, a possibility of observing high multipolarity strength in one nucleon transfer reactions is investigated. (author) 17 refs., 17 figs.

32317 (IPNO-DRE–91-24) **Total cross sections for the PPπ deg channel in the inelastic PP interaction.** Didelez, J.P. (Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire); Reposeur, T.; Duval, M.A.; Frascaria, R.; Rappenecker, G.; Siebert, R.; Warde, E.; Blanpied, G.; Rigney, M.M.; Preedom, B.M.; Battistoni, G.; Bloise, C.; Satta, L.; Laget, J.Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1991. 19p. Order Number DE92570066. Source: OSTI; NTIS (US Sales Only); INIS.

Total cross sections for the reaction $p + p \to p + p + \pi$ deg have been measured for proton incident energies ranging from 480 MeV to 560 MeV in 20 MeV steps, by detecting the decay γ-rays of the

π deg emitted at forward angles. Isoscalar partial cross sections (σ_{01}) are extracted by comparison to the known total cross sections of the $n + p \rightarrow n + n + \pi^+$ measured at the same incident energies. No signal in the energy dependence of the π deg production excitation function due to a possible narrow, isovector dibaryon resonance is noticeable in the data. (author) 19 refs., 5 figs., 2 tabs.

32318 (IPNO-TH–91-10) **Low energy $^{16}O+^{208}Pb$ elastic scattering: an attempt to analyze the microscopic effective potential.** Mau, N.V. (Paris-11 Univ., 91 - Orsay (France). Div. de Physique Theorique); Ferrero, J.L.; Pacheco, J.C.; Bilwes, B. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. Mar 1991. 30p. Order Number DE92570075. Source: OSTI; NTIS (US Sales Only); INIS.

Elastic scattering of ^{16}O on ^{208}Pb is studied at 96, 104, 129.5, 192, 216.6 and 312.6 MeV. The $^{16}O+^{208}Pb$ potential is calculated first in the closure approximation model and compared to semi-phenomenological potentials. Then detailed contributions to the polarization real potential and to the imaginary potential due to the coupling of the elastic channels to the inelastic channels are calculated. The results are compared to the authors' model potential and used to test the main assumptions of the model. From that comparison a qualitative interpretation of the success of the model is proposed. At last the elastic scattering cross sections are calculated and compared to the data. (author) 41 refs., 6 figs., 5 tabs.

32319 (ISN–91-20) **Lambda attachment in fission: a probe of the necking dynamics.** Nifenecker, H.; Malek, F. PS177 LEAR Experiment Collaboration. Grenoble-1 Univ., 38 (France). Inst. des Sciences Nucleaires. Feb 1991. 27p. (CONF-910111–: 29. international winter meeting on nuclear physics, Bormio (Italy), 14-25 Jan 1991). Order Number DE92570085. Source: OSTI; NTIS (US Sales Only); INIS.

A schematic scission model is applied to the lambda attachment function recently obtained by the LEAR PS177 collaboration, in their measurement of the prompt fission of hypernuclei. The relationship between the slope parameter and the fission dynamics was examined in a more quantitative way. It is shown that the attachment function is sensitive to the scission configuration, necking dynamics and nuclear temperature at scission. It provides a new and powerful way to study the nuclear scission process. (R.P.) 19 refs., 9 figs.

32320 (JAERI–1325) **JENDL Dosimetry File.** Nakazawa, Masaharu (Tokyo Univ. (Japan). Faculty of Engineering); Iguchi, Tetsuo; Kobayashi, Katsuhei; Iwasaki, Shin; Sakurai, Kiyoshi; Ikeda, Yujior; Nakagawa, Tsuneo. Japan Atomic Energy Research Inst., Tokai, Ibaraki (Japan). Tokai Research Establishment. Mar 1992. 132p. Sponsored by Japan Atomic Energy Research Inst., Tokyo (Japan). (NEANDC(J)–163/U;INDC(JPN)–152/L). Order Number DE92013755. Source: OSTI; NTIS (US Sales Only); GPO Dep.

The JENDL Dosimetry File based on JENDL-3 was compiled and integral tests of cross section data were performed by the Dosimetry Integral Test Working Group of the Japanese Nuclear Data Committee. Data stored in the JENDL Dosimetry File are the cross sections and their covariance data for 61 reactions. The cross sections were mainly taken from JENDL-3 and the covariances from IRDF-85. For some reactions, data were adopted from other evaluated data files. The data are given in the neutron energy region below 20 MeV in both of point-wise and group-wise files in the ENDF-5 format. In order to confirm reliability of the data, several integral tests were carried out; comparison with the data in IRDF-85 and average cross sections measured in fission neutron fields, fast reactor spectra, DT neutron fields and Li(d,n) neutron fields. As a result, it has been found that the JENDL Dosimetry File gives better results than IRDF-85 but there are some problems to be improved in future. The contents of the JENDL Dosimetry File and the results of the integral tests are described in this report. All of the dosimetry cross sections are shown in a graphical form.

32321 (JAERI-M–92-020) **Measurement of formation cross sections of short-lived nuclei by 14 MeV neutrons–F, Mg, Si, Ti, Cr, Ni, Ga, Rb, Sr, Ag.** Kawade, Kiyoshi (Nagoya Univ. (Japan)); Yamamoto, Hiroshi; Kobayashi, Takashi; Katoh, Toshio; Iida, Toshiyuki; Takahashi, Akito. Japan Atomic Energy Research Inst., Tokai, Ibaraki (Japan). Tokai Research Establishment. ©Mar 1992. 56p. Sponsored by Japan Atomic Energy Research Inst., Tokyo (Japan). (INDC(JPN)–154/L). Order Number DE92010632. Source: OSTI; NTIS (US Sales Only).

Sixteen neutron activation cross sections for (n,2n), (n,p), (n, n'p) and (n,α) reactions producing short-lived nuclei with half-lives between 20 s and 7 min have been measured in the energy range of 13.4 to 14.9 for F, Mg, Si, Ti, Cr, Ni, Ga, Rb, Sr and Ag. Seven half-lives of short-lived nuclei produced by 14 MeV or thermal neutron bombardments were measured with Ge detectors for ^{51}Ti, ^{60m}Co, ^{88}Rb, ^{91}Mo, ^{94}Y, ^{108}Ag and ^{109m}Pd in the spectrum multiscaling mode.

32322 (JAERI-M–92-029) **Polarized proton induced breakup of ^{12}C at 16 MeV.** Koori, Norihiko (Tokushima Univ. (Japan)); Watanabe, Yukinobu; Kashimoto, Hironori; Hane, Hiroki; Aoto, Akira; Nohtomi, Akihiro; Widodo, Susilo; Iwamoto, Osamu; Yamaguchi, Ryoji; Sagara, Kenji; Nakamura, Hiroyuki; Maeda, Kazuhide; Nakashima, Takao. Japan Atomic Energy Research Inst., Tokai, Ibaraki (Japan). Dept. of Physics. ©Mar 1992. 46p. Sponsored by Japan Atomic Energy Research Inst., Tokyo (Japan). (INDC(JPN)–156/L). Order Number DE92012257. Source: OSTI; NTIS (US Sales Only).

Double differential cross sections and analyzing powers were measured of protons and α particles emitted from the bombardment of ^{12}C with 16 MeV polarized protons. The measured energy spectra of protons and α particles were analyzed on the basis of the reaction model in which three or four-body simultaneous breakup process is taken into account. The calculated proton and α particle spectra show good agreement with the continuous spectra observed in the low outgoing energy range.

32323 (JINR-E–1-91-146) **Hadrons in statu nascendi.** Strugalski, Z. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of High Energy. 1991. 11p. Order Number DE92645232. Source: OSTI; NTIS (US Sales Only); INIS.

Nuclei were employed as suitable detectors to study space-and time-intervals of strong action. Such detectors can see all sorts of hadrons, resonances, and may be even bare or semibare quarks - in other words, hadrons in statu nascendi. They are efficient owing to high density of intranuclear matter. In short, preliminary results are: the hadron production in hadronic collisions goes by means of some intermediate objects. 16 refs.; 4 figs.

32324 (JINR-E–2-91-92) **Quantum effects and colour transparency in charmonium photoproduction on nuclei.** Kopeliovich, B.Z. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems); Zakharov, B.G. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Nuclear Problems. 1991. 16p. Order Number DE92645153. Source: OSTI; NTIS (US Sales Only); INIS.

A rigorous quantum-mechanical treatment of colour transparency effects in diffractive photoproduction of c-barc-pairs on nuclei was developed. The evolution of the c-barc wave function during propagating through a nucleus is rather a considerable distortion of its form, than a trivial attenuation. One of the manifestations of the quantum effects is a nuclear antishadowing of Ψ' yield, i.e. transparency above one. On the contrary, a considerable nuclear shadowing is predicted for the photoproduction of J/Ψ, which has a much smaller absorption cross section than Ψ'. 26 refs.; 5 figs.; 1 tab.

32325 (JINR-E–4-91-106) **On different values of the neutron-electron scattering amplitude and neutron mean square charge radius obtained from the low-energy dependence of the scattering amplitude.** Nikolenko, V.G.; Popov, A.B. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Neutron Physics. 1991. 4p. Order Number DE92645168. Source: OSTI; NTIS (US Sales Only); INIS.

Discrepancy far outside experimental errors between the values obtained by two teams for neutron-electron scattering amplitude and neutron mean square charge radius from describing the coherent amplitude and total cross sections σ_t of Bi, calculated within different approaches, will be here explained by the fact of omitting the terms responsible for interference between resonances when the optical theorem is applied to the total nuclear scattering resonance amplitude incorrectly taken as the sum of the amplitudes of single compound levels. 5 refs.

32326 (JINR-E–4-91-126) **Off-shell effects in the dynamical model of pion photoproduction on nucleon.** Chumbalov, A.A. (AN Kazakhskoj SSR, Alma-Ata (Kazakhstan). Inst. Yadernoj Fiziki); Kamalov, S.S. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1991. 11p. Order Number DE92645154. Source: OSTI; NTIS (US Sales Only); INIS.

In terms of the dynamical model the rescattering effects for the E_{0+},M_{1+} and E_{1+} multipoles are analyzed. Strong correlation between the sensitivity to the off-shell behaviour of the $T_{\pi N}$-matrix and the representation of the pion propagator in the photoproduction operator is shown to exist. For the time-ordered choice of a pion propagator the effect of a final state interaction is determined by the charge-exchange channel. In this case the off-shell effects are not important. It is also shown that the value of the coupling constant of the E2-transition in the $\gamma N\Delta$-vertex depends on a version of the separable model for the πN interaction in the P_{33}-channel. 11 refs.; 2 figs.; 4 tabs.

32327 (JINR-E–4-91-132) **Resonance amplification of the nuclear reaction X(a,b)Y near the a+X channel threshold.** Melezhik, V.S. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Nuclear Problems. 1991. 15p. Order Number DE92645189. Source: OSTI; NTIS (US Sales Only); INIS.

Deviation of the cross section for the nuclear reaction X(a,b)Y from the Gamow formula due to an interaction additional to the Coulomb one in the entrance channel has been analyzed. It is shown that the reaction cross section has an oscillating structure at low energies. If the maximum of the first oscillation is close to the threshold of the channel a+X, it has a resonance behaviour. The peculiarity of the cross sections leads to the resonance amplification of the rate for a muon-catalyzed fusion reaction ('in flight' fusion) $t\mu+d\to{}^4He+n+\mu$ at the energy ≈76 eV and may influence the μ-capture rate in a dense mixture of hydrogen isotopes. 26 refs.; 4 figs.

Submitted to Z. Phys., A.

In the formation of a compound nucleus the evolution of double-nuclear system is considered. The enhanced yield of light particles for some reactions is explained by the dynamic reasons. The role of quantum and thermal fluctuations is discussed. The results of the previous paper are confirmed. 11 refs.; 3 figs.

32329 (JINR-N–2-48-91, pp. 4-10) **Multiquark stable and metastable states.** Shahbazian, B.A.; Volokhovskaya, T.A.; Martynov, A.S. Joint Inst. for Nuclear Research, Dubna (Russian Federation); Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of High Energy. 1991. In *JINR rapid communications: Collection.* 45p. Order Number DE93000805. Source: OSTI; NTIS (US Sales Only); INIS.

In the stable state sector a candidate for the predicted A(I=1,2, Y=-1, B=2, S=-3)-dibaryon was observed in p-propane collisions at 10 GeV/c. Kinematical four-vertex, ten- and nine-constraint fits performed were successful in both cases. In the first one the dibaryon mass was fixed at the predicted values. In the second case the fitted mass values coincide with the predicted ones within the limits of errors. In the metastable state sector the $\Lambda p\pi$-resonance found in $n^{12}C$-collisions at 7 GeV/c has been confirmed in $p^{12}C$-interactions at 10 GeV/c. 10 refs.; 3 figs.; 2 tabs.

32330 (JINR-N–2-48-91, pp. 11-20) **A possible interpretation of anomalous behaviour of proton spectrum at 0 deg from deuteron fragmentation at 9 GeV/c.** Azhgirej, L.S. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation); Ignatenko, M.A.; Yudin, N.P. Joint Inst. for Nuclear Research, Dubna (Russian Federation); Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Computing Techniques and Automation. 1991. (In Russian). In *JINR rapid communications: Collection.* 45p. Order Number DE93000805. Source: OSTI; NTIS (US Sales Only); INIS.

Momentum spectra of protons at 0 deg from relativistic deuteron fragmentation on nuclei are analyzed. Possible origins of the deviation of 0 deg proton spectrum in ${}^1H(d,p)X$ reaction at 9.1 GeV/c from the impulse approximation calculations are considered. It is shown that taking into account the finite angular resolution of the experimental apparatus and the corresponding normalization of the experimental data and also the contribution of protons from the scattering of deuteron nucleons on target protons, in addition to the stripping, allow these data to be brought into agreement with the calculation results in the framework of the relativistic impulse approximation. 19 refs.; 4 figs.

32331 (JINR-R–1-91-206) **Charge exchange ${}^7Li\to{}^7Be$ cross sections at 21 GeV/c on H,C,Al,Cu, Pb nuclei.** Avramenko, S.A. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy); Golokhvastov, A.I.; Belikov, Yu.A. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of High Energy. 1991. 8p. (In Russian). Order Number DE92645191. Source: OSTI; NTIS (US Sales Only); INIS.

The charge change and change exchange ${}^7Li\to{}^7Be$ cross sections were measured on C, Al, Cu, Pb and CH targets at a ${}^7Li$ momentum of 21 GeV/c. The measurement method is described. The charge exchange cross section data give evidence for a stronger A dependence of target-nuclei than that for peripheral collisions. 15 refs.; 2 figs.; 1 tab.

32332 (JINR-R–1-91-239) **Charge-exchange cross sections of the ${}^3H\to{}^3He$ reaction on hydrogen, carbon, aluminium, copper and lead at 9 GeV/c.** Avramenko, S.A. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy); Gal'perin, A.G.; Belikov, Yu.A. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of High Energy. 1991. 6p. (In Russian). Order Number DE92645178. Source: OSTI; NTIS (US Sales Only); INIS.

The cross sections of the (${}^3H\to{}^3He$) reaction on nuclei at 9 GeV/c have been measured. The results obtained with different targets are the following: H -0.71±0.06 mb, C -1.96±015 mb, Al -2.55±20 mb, Cu -3.42±27 mb, Pb -4.88±39 mb. The method of measurement is described. Possible sources of systematic errors are considered. 10 refs.; 1 fig.; 1 tab.

32333 (JINR-R–3-91-244) **Measurement of the cross section of the ${}^{36}Ar(n,\alpha){}^{33}S$ and ${}^{50}V(n,p){}^{50}Ti$ reactions induced by thermal neutrons.** Andzheevski, Yu.A. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics); Gledenov, Yu.M.; Zasyslov, G.V. Joint Inst. for Nuclear Research, Dubna (Russian Federation). The EGS4, a simulation code for electron-photon transport, has been improved to calculate the photonuclear reaction. Neutron yields in the Pb target bombarded by 34 MeV electron have been calculated by the improved code. The calculation results are well agreed with experimental data within 10%. We have used this code in order to estimate the transmutation of ^{137}Cs using bremsstrahlung. (author).

Thesis. Submitted to Univ. of Colorado, Boulder, CO.

A survey in nuclear mass and in momentum transfer of cross sections and analyzing powers in the quasielastic region has been made using the (p,n) reaction. The measurements were performed at an energy of 795 MeV at the Neutron Time of Flight Facility and the Weapons Neutron Research line at LAMPF. The (p,n) reaction isolates the isovector ($\vec{\tau}_1 \cdot \vec{\tau}_2$) part of the nucleon nucleus interaction. Standard models of quasielastic scattering were able to describe the magnitude and shape of the double differential cross sections very well if account was taken of a significant background from double scattering. In contrast, the quasielastic response was shifted to much higher excitation energy than what was expected. This was true for all nuclei at moderate to large momenta transfers. Neither the Coulomb energy shift nor RPA calculations with the standard particle hole (p-h) interactions could account for this large shift. The data argue for a repulsive interaction in both the transverse and longitudinal channels of the p-h interaction. A suppression of the quasielastic analyzing power compared to the free nucleon nucleon analyzing power was found in ^{nat}C at all the angles measured. The same region in ^{nat}Pb showed little or no suppression. Part of the suppression in the ^{nat}C data may be accounted for by relativistic models of the nucleus employing large vector and scalar potentials with an effective mass of .85 times the free nucleon mass. The relatively larger contribution of double scattering ^{nat}Pb($\vec{p}$, n) than to ^{nat}C($\vec{p}$, n) may account for the difference in analyzing power for these two targets in the quasielastic region.

32339 (LA-UR–92-2186) **Recent advances in the US fission yield and delayed neutron evaluations.** England, T.R. (Los Alamos National Lab., NM (United States)); Rider, B.F.; Brady, M.C. Los Alamos National Lab., NM (United States). [1992]. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-921102–17: Joint American Nuclear Society/European Nuclear Society international meeting, Chicago, IL (United States), 15-20 Nov 1992). Order Number DE92018877. Source: OSTI; NTIS; INIS; GPO Dep.

Over the past fifteen years, US reactor analysts have been presented with three major evaluated nuclear data bases: Evaluated Nuclear Data Files (ENDF/B) versions -IV, -V, and most recently, -VI. Advances in the quantity and quality of fission yield data have been almost exponential from evaluation to evaluation. The most recent release of ENDF/B-VI represents an entirely new approach to the evaluation of delayed neutron data. Due to the effort and expense of processing and testing the basic data evaluations for specific applications, data libraries contained in the m mn reactor physics codes are not usually dated with the release of a new evaluation. This is particularly true for the decay data files utilizing fission yield and delayed neutron data. The introduction of ANSI/ANS standards for data of this type would provide a mechanism for assuring the reliability and quality of data of this type. Working groups for each of these proposed standards are comprised of both US and international experts in areas of reactor physics utilizing these data, as well as the data evaluators themselves. This summary briefly discusses the status of the two data evaluations and the progress toward developing standards in each area.

32341 (LYCEN-T–9123) **Penetration of Hydrogen clusters from 10 to 120 kev/u in carbon foils. Study of their slowing-down and charge distribution of emerging fragments.** Ray, E.M. Lyon-1 Univ., 69 - Villeurbanne (France). Inst. de Physique Nucleaire; Lyon-1 Univ., 69 (France). Jun 1991. 39p. (In French). Order Number DE93701126. Source: OSTI; NTIS (US Sales Only); INIS.

This work is devoted to the experimental study of the interaction between fast (10 to 120 keV/p) hydrogen clusters with thin solid targets. First, we have studied the slowing-down of $H_n^+ (2 \leq n \leq 21)$ clusters through carbon foils. Up to date this had been made only with molecular ions. We obtain evidence for vicinage effects on the energy loss of proton-clusters. We show that for projectile energies larger than 50 keV/p, the energy loss of a proton in a cluster is enhanced when compared to that of an isolated proton of the same velocity. At lower incident energies, it is a decrease of the energy loss which is observed. The same effect is also observed in the energy lost in the entrance window of a surface barrier detector bombarded by clusters. This phenomenon is interpreted in terms of interferences between individual polarisation wakes induced by each proton of the cluster. In the second part, we propose an accurate method to study the charge state of the atomic fragments resulting from the dissociation of fast H_n^+ ($2 \leq n \leq 15$) clusters through a carbon foil. This method gives also the distribution of the neutral atoms among the emerging fragments. These distributions are finally compared with binomial laws expected from independent particles.

32342 (CEAC-R–2-92) **Effectiveness in detecting fission fragments with ionization chambers.** Manrique Garcia, J. (Centro de Estudios Aplicados al Desarrollo Nuclear (CEADEN), La Habana (Cuba)); Monne, G. Comision de Energia Atomica, La Habana (Cuba). 1991 11p. (In Spanish). Order Number DE93602910. Source: OSTI; NTIS (US Sales Only); INIS.

Detection of fission fragments is important in nuclear measurements. When a high detection accuracy is required it is necessary to take in account the detection losses due to the absorption of fragments in the fissionable material. The losses corrections might change the final results in 2-3%. The traditional expression used in the calculation of the detection efficiency does not consider neither the density variation of the fissionable substance with its width, because it depends on the target material. That's why actually in many labs it is being searched new methods that allow to find the efficiency for each target. In this work a new method for determination of absorption efficiency is presented. The obtained results are analyzed.

32343 (CEAC-R–3-92) **Measurement of the removal sechtion of biological protection concretes in the spectrum of an AmBe source.** Sandin, C. (Centro de Estudios Aplicados al Desarrollo Nuclear (CEADEN), La Habana (Cuba)); Tenrreiro, J.; Desdin, L.; Sarria, P.; Monne, G.; Tellez, E.; Csikai, J. Comision de Energia Atomica, La Habana (Cuba). 1992 8p. (In Spanish). Order Number DE93602903. Source: OSTI; NTIS (US Sales Only); INIS.

A method to measure the neutron removal cross sections in cuban concrete for biological protection using the average spectrum of a radioisotopic source was developed. The method was verified by the measurements of different materials with know removal cross sections like Pb, paraffin and water. These spetial cuban concrete are elaborated on the basis of arids of limestone, limonite, magnetite, baryte and serpentine. The aim of this work is to contribute to the characterization of those concretes for its use in cuban nuclear installations. In the experiments were used an AmBe source with an strength of 10^6 n/s. and a long counter detector with associated electronics. It can be seen in the table that the concretes of magnetite and limonite have the best shielding properties for neutrons.

32344 (FEI–2155) **REMP1-PC computer code for optimization of radiation shields characteristics.** Dubinin, A.A.; Kurachenko, Yu.A. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk (Russian Federation). Fiziko-Ehnergeticheskij Inst. 1990. 14p. (In Russian). Order Number DE92645237. Source: OSTI; NTIS (US Sales Only); INIS.

The version of the REMP1 program designed for solution of problems of calculating radiation shield characteristics by the IBM PC AT/XT computer, is described. High-performance of the program enables to use it for optimization of shield characteristics in complex computer schemes for solution of multigroup tasks of calculating multidimensional shield problems, in systems of group constants preperation. Some results obtained in solution of model tasks including ones of optimizing radiation shield characteristics, are presented. 7 refs.; 3 tabs.

32345 (INP-MSU–90-34-180) **Two-flux Monte Carlo approach to electron diffusion in solids.** Shevchenko, L.V.; Yurchenko, B.N. Moskovskij Gosudarstvennyj Univ., Moscow (Russian Federation). Nauchno-Issledovatel'skij Inst. Yadernoj Fiziki. 1990. 13p. (NIIYaF-MGU–90-34-180.). Order Number DE92645250. Source: OSTI; NTIS (US Sales Only); INIS.

By means of Monte Carlo method the diffusion of monoenergetic beam of primary 30 keV electrons in bulk target of Al, Cu, and Au is simulated. The fast but correct simulation model is proposed, which is based on Fano theory for electron stopping and utilizes relativistic Hartree-Fock approximation for electron-atom elastic scattering. Computed values are averaged over 200.000 electron trajectories. The two-flux formulation is applied to study the angular and energy structure of electron probe inside the target and to compute the absolute value of X-ray production depth distribution. The simulation results are compared with those obtained experimentally and good agreement is observed. 12 refs.; 5 figs.; 1 tab.

32346 (JINR-R–3-91-202) **Calculation of a variant of the 'inelastic' adiabatic spin-flipper for cold neutrons.** Pokotilovskij, Yu.N.; Shelkova, I.G.; Ehler, G. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Neutron Physics. 1991. 6p. (In Russian). Order Number DE92645239. Source: OSTI; NTIS (US Sales Only); INIS.

The results of numerical calculations of the probability of reverse of a slow neutron spin for the model of the adiabatic spin-flipper are presented. The spin-flipper serves for the magneto-resonance slowing down of neutrons, spreading along a mirror neutron guide. The slowing element uses constant magnets for the creation of the leading magnetic field. The results of the calculation show the principal possibility for the creation of a many-element slowing system and numerical calculation of the behaviour of the neutron spin in such devices. 13 refs.; 2 figs.; 1 tab.

32347 (JINR-R–16-91-177) **Neutron spectra in the energy range from 10^{-8} to hundreds of MeV measurement in hard scattered radiation fields.** Krylov, A.R.; Timoshenko, G.N.; Alejnikov, V.E. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Nuclear Problems. 1991. 14p. (In Russian). Order Number DE92645238. Source: OSTI; NTIS (US Sales Only); INIS.

The technique of neutron spectra unfolding in wide energy range from 10^{-8} to hundreds of MeV on the base of multisphere Bonner's detector and plastic scintillator spectrometer ridings has been described. This technique is intended for neutron spectra measurements in fields of mixed scattered radiation behind accelerators shielding and neutron component of cosmic background. The expressions of neutron maximum equivalent and ambient doses in wide energy range and neutron fluences of energy above 20 MeV are presented. 13 refs.; 5 figs.

32348 (LA-UR–92-1805) **Applications of the Los Alamos High Energy Transport code.** Waters, L.; Gavron, A.; Prael, R.E. Los Alamos National Lab., NM (United States). [1992]. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9208114–2: American Nuclear Society meeting, Jackson Hole, WY (United States), 16-19 Aug 1992). Order Number DE92017408. Source: OSTI; NTIS; INIS; GPO Dep.

Simulation codes reliable through a large range of energies are essential to analyze the environment of vehicles and habitats proposed for space exploration. The LAHET monte carlo code has recently been expanded to track high energy hadrons with FLUKA, while retaining the original Los Alamos version of HETC at lower energies. Electrons and photons are transported with EGS4, and an interface to the MCNP monte carlo code is provided to analyze neutrons with kinetic energies less than 20 MeV. These codes are benchmarked by comparison of LAHET/MCNP calculations to data from the Brookhaven experiment E814 participant calorimeter.

32349 (LA-UR–92-1847) **A caution on reliability using "optimal" variance reduction parameters.** Booth, T.E. Los Alamos National Lab., NM (United States). [1992]. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-921102–12: Joint American Nuclear Society/European Nuclear Society international meeting, Chicago, IL (United States), 15-20 Nov 1992). Order Number DE92017502. Source: OSTI; NTIS; GPO Dep.

With the development of the score "moment equations" in the 1970's and 1980's came a number of attempts to predict "optimal" biasing parameters that minimized the second score moment or that minimized the product of the variance and the computing time. This paper will give two examples where the fourth moment is infinite for the parameter choice that minimizes the variance. Thus, although the variance is minimized, the variance of the variance is infinite, making the estimated variance unreliable.

32350 (LA-UR-92-2073) **Comparison of TORT and THREEDANT on realistic X-Y-Z shielding problems.** Parsons, D.K. Los Alamos National Lab., NM (United States). [1992]. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-921102-13: Joint American Nuclear Society/European Nuclear Society international meeting, Chicago, IL (United States), 15-20 Nov 1992). Order Number DE92017444. Source: OSTI; NTIS; INIS; GPO Dep.

Three-dimensional discrete ordinates neutronics calculations are becoming practical. This paper will compare TORT and THREEDANT on some typical neutron/gamma shielding problems. This comparison is preliminary since both codes are still evolving. Comparisons were carried out on a Los Alamos CRAY-YMP supercomputer, though both codes can run on smaller computers. Version 1.3.5 of TORT and the current developmental versions of THREEDANT were used.

32351 (LIYaF-90-1605) **Production of the mirror foil for the ultracold neutron guides.** Borovikova, N.V.; Brandin, A.B.; Egorov, A.I.; Lobashev, V.M. AN SSSR, Leningrad (Russian Federation). Inst. Yadernoj Fiziki. 1990. 7p. (In Russian). Order Number DE92645240. Source: OSTI; NTIS (US Sales Only); INIS.

The method of the metallic mirror foils production from 0.1 to 0.6 mm thick is described. The neutron guides made of such foils combine good mechanical properties of metallic guide and high surface quality of glass guide. 3 refs.

This paper describes the development of a method for solving the time-dependent, three-dimensional Boltzmann transport model. A hybrid stochastic/deterministic technique is utilized with a Monte Carlo code embedded inside of a quasi-static kinetics framework. The amplitude function is computed deterministically by a conventional point kinetics algorithm. The point kinetics parameters, reactivity and generation time, as well as the flux shape, are computed stochastically during the random walk of the Monte Carlo calculation. The code which has been developed based on this new method could serve as a benchmarking tool for other more approximate and less expensive kinetics codes. It would also be useful for modeling transients of systems with complex geometries. Furthermore, 3-D transport theory is needed in areas such as reactor accident studies which involve coolant voiding and/or core disassembly. Preliminary results are presented in this paper. The code is applied to a standard benchmark problem and the results are compared to another method.

One way to reduce the large degeneracy of the Hyperspherical Harmonic basis for solving few- and many-body bound state problems is to introduce an optimal basis truncation called the Potential Harmonic (PH) basis. Various PH truncation schemes are introduced, and their accuracies are evaluated in predicting the energies of the Helium and H^- ground states , and the excited 2^1S level of the Helium atom. It was found that the part of the PH basis that accounts for one-body correlations gives a better ground state energy for He than the Hartree-Fock approximation. When an orthogonal complement is introduced to the basis to account for e-e correlations, the error in the binding energy is found to be .00025 au and .00015 au for ground and excited helium, resp., and .00035 au for H^-. Furthermore, the PH truncation is about 99.9% accurate in accounting for contributions coming from large values of the global angular momentum. This PH scheme is also much more accurate than previous versions based on the Faddeev equations. The present results indicate that the PH truncation can render the Hyperspherical Harmonic method useful for systems with N>3. (R.P.) 14 refs., 4 tabs.

We propose to extend our state-of-the-art, ab initio XAFS (X-ray absorption fine structure) codes, FEFF. Our current work has been highly successful in achieving accurate, user-friendly XAFS standards, exceeding the performance of both tabulated standards and other codes by a considerable margin. We now propose to add the capability to treat more complex materials. This includes multiple-scattering, polarization dependence, an approximate treatment of XANES (x-ray absorption near edge structure), and other improvements. We also plan to adapt FEFF to other spectroscopies, e.g. photoelectron diffraction (PD) and diffraction anomalous fine structure (DAFS).

32356 (KFK-4993) **Methods reducing doppler broadening in laserspectroscopy of stored ions and the isotope shifts of hafnium.** Rink, J. Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Kernphysik; Heidelberg Univ. (Germany). Fakultaet fuer Physik und Astronomie. Feb 1992. 91p. (In German). Order Number DE93702350. Source: OSTI; NTIS (US Sales Only); INIS.

In context to determine nuclear parameters of stored hafnium ions with laserspectroscopic methods the isotope shifts of the isotopes with even mass numbers from ^{172}Hf to ^{180}Hf have been measured. The value for the isotope ^{172}Hf and with it the change of the mean square charge radius has been unknown so far. Hafnium ions were stored in a Paul trap for mote than four hours. The advantage in using an ion trap is the small necessary sample size. In the case of hafnium an amount of 10 pg is sufficient. Because of the ion velocity the linewidth of a spectrum is doppler-broadened. This is mainly due to the applied storage voltage. The spectral resolution is not enough to measure isotope shift and hyperfine structure of hafnium ions. Therefore new methods have been developed to reduce the linewidth by excitation of the ions with light only in definite phases of the applied alternating voltage. The width of the spectra is then reduced to a factor three. The signal strength decreases not more than 50%. (orig.).

This Progress Report describes the experimental work carried out, and the work in progress, at the Cornell EBIS Laboratory during the period 7/1/1991 to 6/30/1992. During this period, a number of experiments were carried out. The absolute values of the total, one, two and three electron transfer cross sections for highly charged argon ions ($8 \leq q \leq 16$) colliding with argon at 2.3 qkev laboratory energy were measured. The distribution of recoil ions and molecular fragments formed in highly charged ion atom and molecule collisions was measured in order to help the interpretation of electron spectra in the 40–320 eV energy range emitted in Ar^{q+}+Ar($8 \leq q \leq 16$) collisions at 2.3 qkeV that were measured in our laboratory. The interpretation of the electron spectra is still under way. A new collision chamber was built which contains an ion decelerating lens system and a high resolution monochromator-analyzer combination. Ions extracted from the Cornell Electron Beam Ion Source were successfully decelerated from 2.3 qkeV down to 30 qeV Preliminary 0° translational energy spectra for Ar^{12+} on Ar at a collision energy of 38.6 qeV show a 0.56 qeV resolution. Work is in progress to extend measurements of cross sections and recoil ion charge state distributions down to collision energies in the 10 eV/amu range.

32358 (DOE/ER/14145–T1) **Physics of correlated systems: Progress report, December 1, 1991–November 30, 1992.** Greene, C.H. Colorado Univ., Boulder, CO (United States). [1992]. 4p. This report discusses the following topics: spectra of heavy open- shell atoms; multiphoton ionization processes in real atoms; angular distribution of photoelectrons ejected from aligned two-electron atoms; and few-electron correlations. (LSP).

32359 (RCNP-T–30) **Proceedings of the workshop on 'spin-charge transfer reaction in atomic collision process' for planning of next period of cascade project.** Osaka Univ., Ibaraki (Japan). Research Center for Nuclear Physics. Mar 1992. 96p. (In Japanese). (CONF-9202134–: Workshop on 'spin-charge transfer reaction in atomic collision process' for planning of next period of cascade project, Ibarakai (Japan), 29 Feb 1992). Order Number DE93704290. Source: OSTI; NTIS; INIS.

This workshop was held on February 29, 1992, and was planned to investigate from the theoretical side the spin-charge transfer reaction which is used for a polarized heavy ion source, the development of which has been advanced in the Research Center for Nuclear Physics. In fiscal year 1992, the plan of installing an ECR ion source, Neomafios-10 GHz, as the AVF cyclotron external incident ion source is in progress. This external incidence system can be used also for the research on various atomic physics, in addition to the research on atomic nucleus physics. In this workshop, heated discussion was carried out on what research on atomic physics can be advanced in the Research Center for Nuclear Physics hereafter, through the investigation of the various problems that the atomic physics from low to high energy holds and new technical development. Particularly, the atomic physics using polarized ions seems to become a very unique study in the world. It seems proper to name this polarized heavy ion incidence system Spin factory. This report was edited based on the copies of the transparencies. (K.I.).

6644 Experimentally Derived Information On Atomic and Molecular Properties

32360 (BNL–47814) **Rotationally resolved photoionization with coherent VUV radiation.** Wiedmann, R.T.; Tonkyn, R.G.; White, M.G. Brookhaven National Lab., Upton, NY (United States). [1992]. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. (CONF-920735–3: 10. international conference on vacuum ultraviolet radiation physics, Paris (France), 27-31 Jul 1992). Order Number DE92019257. Source: OSTI; NTIS; INIS; GPO Dep.

Pulsed field ionization (PFI) has been used in conjunction with coherent VUV radiation to investigate the rotational state distributions of molecular cations following single photon ionization. The rotational state distributions for several linear cations (O_2, NO, OH(OD), HCl and N_20) can be interpreted predominately on the basis of the near-threshold, one-electron photoionization dynamics; however, field-induced autoionization is often the dominate ionization pathway for rotational branches involving negative changes in core angular momentum. For photoionization of the H_2X ($X = 0$, S) non-linear triatomic molecules, transitions between asymmetric top levels involving the rotational angular momentum projections, K_a and K_c permit resolution of the photoelectron continua according to symmetry. The observed spectra clearly demonstrate the importance of the non-spherical nature of the molecular ion potential which leads to photoelectron final states which are unexpected from atomic-like analogies.

32361 (LA-UR–92-2320) **Interchain coupling and 3D modeling of trans-polyacetylene.** Bronold, F.; Saxena, A.; Bishop, A.R. Los Alamos National Lab., NM (United States). [1992]. 29p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9205229–1: Center for Nonlinear Studies (CNLS) conference, Los Alamos, NM (United States), May 1992). Order Number DE92018921. Source: OSTI; NTIS; INIS; GPO Dep.

In spite of the success of the SSH model for trans-polyacetylene in interpreting many experimental results (e.g. optical and magnetic properties) there remain some aspects of the real material which are outside the scope of the simple 1D model. Especially ordering phenomena of doped and undoped trans-polyacetylene as well as transport properties (e.g. electronic and thermal conductivity) are beyond a 1D description. There are many attempts to construct a transport theory for this novel class of materials using solitons or polaxons as the basic ingredients. But so far it is not yet clear whether these typical 1D excitations still exist in crystalline transpolyacetylene. Therefore, to clarify the role which intrinsic self-localized nonlinear excitations characteristic of 1D models play in the bulk (3D) material, we study the stability of a polaronic excitation against interchain coupling. As a preliminary step we consider first two coupled t-$(CH)_x$-chains where the π-electrons are allowed to hop from one chain to the other. Then we introduce a 3D generalization of the SSH model and study a polaron in a 3D crystalline environment.

32363 (ANL/CP–74717) **Development and verification of an anisotropic turbulence model in the COMMIX-1C/ATM computer code.** Bottoni, M.; Chang, F.C. Argonne National Lab., IL (United States). [1992]. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-920903–13: International topical meeting on reactor thermal hydraulics: towards the next generation of nuclear power plants, Salt Lake City, UT (United States), 20-24 Sep 1992). Order Number DE92019589. Source: OSTI; NTIS; GPO Dep.

The computer code COMMIX-1C/ATM, which describes single-phase, three-dimensional transient thermofluiddynamic problems, has provided the framework for the extension of the standard k-ε turbulence model to a six-equation model with additional transport equations for the turbulence heat fluxes and the variance of temperature fluctuations. The new model, which allows simulation of anisotropic turbulence in stratified shear flows, is referred to as the Anisotropic Turbulence Model (ATM). The ATM has been verified with numerical computations of stable and unstable stratified shear flow between parallel plates.

32364 (LA-UR-92-1993) **The electronic structure of core states under extreme compressions.** Straub, G.K. Los Alamos National Lab., NM (United States). [1992]. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9206252-1: 23. summer school on theoretical physics Moscow Engineering Physics Institute (MEPhI), Tver' Oblast (USSR), 1-5 Jun 1992). Order Number DE92017451. Source: OSTI; NTIS; INIS; GPO Dep.

At normal density and for modest compressions, the electronic structure of a metal can be accurately described by treating the conduction electrons and their interactions with the usual methods of band theory. The core electrons remain essentially the same as for an isolated free atom and do not participate in the bonding forces responsible for creating a condensed phase. As the density increases, the core electrons begin to "see" one another as the overlap of the tails of wave functions can no longer be neglected. The electronic structure of the core electrons is responsible for an effective repulsive interaction that eventually becomes free-electron-like at very high compressions. The electronic structure of the interacting core electrons may be treated in a simple manner using the Atomic Surface Method (ASM). The ASM is a first-principles treatment of the electronic structure involving a rigorous integration of the Schroedinger equation within the atomic-sphere approximation. Solid phase wave functions are constructed from isolated atom wave functions and the band width W_l and the center of gravity of the band C_l are obtained from simple formulas. The ASM can also utilize analytic forms of the atomic wave functions and thus provide direct functional dependence of various aspects of the electronic structure. Of particular use in understanding the behavior of the core electrons, the ASM provides the ability to analytically determine the density dependence of the band widths and positions. The process whereby core states interact with one another is best viewed as the formation of narrow electron bands formed from atomic states. As the core-core overlap increases, the bands increase in width and mean energy. In Sec.3 this picture is further developed and from the ASM one obtains the analytic dependence on density of the relative motion of the different bands. Also in Sec. 3 is a discussion of the transition to free electron bands.

32365 (LA-UR-92-2083) **The compactness of front tracking for chromatography electrophoresis and incompressible multiphase flow.** Wendroff, B. Los Alamos National Lab., NM (United States). [1992]. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9204181-1: 4. international conference on hyperbolic problems, Taormina (Italy), 3-8 Apr 1992). Order Number DE92017442. Source: OSTI; NTIS; INIS; GPO Dep.

An analysis of the equations of chromatography from the point of view of hyperbolic conservation laws has been reviewed in recent literature. Serre was able to prove that the Lax-Friedrichs difference scheme, Godunov's method, and the viscosity method, have a subsequence converging to a weak solution of the chromatography equations, with no restriction on the size of the initial data. The purpose of this note is to announce that two versions of front tracking can be added to this list. After a brief description of the properties of the chromatography system and a definition of front tracking we give the basic steps of the proof. An example showing the quality of a front tracking solution is given. The equations of idealized electrophoresis and multiphase incompressible flow are very similar to the chromatography equations, but the former have linearly degenerate characteristic field, creating contact discontinuities. In the final section we briefly indicate how our result for chromatography carries over to this case.

32366 (SAND-92-1571C) **Bifurcations in elastic-damaging materials.** Neilsen, M.K. (Sandia National Labs., Albuquerque, NM (United States)); Schreyer, H.L. Sandia National Labs., Albuquerque, NM (United States); New Mexico Univ., Albuquerque, NM (United States).. Dept. of Mechanical Engineering. [1992]. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DP00789. (CONF-921110-13: Winter annual meeting of the American Society of Mechanical Engineers, Anaheim, CA (United States), 8-13 Nov 1992). Order Number DE92018818. Source: OSTI; NTIS; GPO Dep.

Continuum damage theories describe the progressive reduction in stiffness and strength of brittle materials resulting from the initiation and growth of microcracks and microvoids. When brittle materials are loaded into the nonlinear regime, they often exhibit localized zones of intense deformation and the eventual formation of macrocracks. Criteria for diffuse and discontinuous bifurcations have previously been developed and used to study the initiation of necking and localization in elastic-plastic materials. In this investigation, the same bifurcation criteria are applied to continuum damage theories. Since the bifurcation criteria depend on the fourth-order tangent modulus tensor, the first step in this investigation is the derivation of the tangent modulus tensor for a general continuum damage theory. An eigenanalysis of the symmetric part of the tangent modulus tensor is then shown to fully characterize the potential diffuse and discontinuous bifurcations associated with a given continuum damage theory.

32367 (UCRL-JC-110652) **Analysis of collective resonances in clusters: Metals and carbon.** Kresin, V.V. Lawrence Livermore National Lab., CA (United States). 1 May 1992. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-920402-53: Material Research Society spring meeting, San Francisco, CA (United States), 27 Apr - 2 may 1992). Order Number DE92019582. Source: OSTI; NTIS; GPO Dep.

Dipole photoabsorption spectra of small clusters are analyzed. Two types of systems are considered: Metal clusters and the carbon fullerenes. Both have been found to exhibit strong collective photoabsorption modes associated with the motion of delocalized electrons. We describe analytical results for the resonance frequencies in both spherical (closed-shell metallic, C_{60}) and spheroidal (open-shell metallic, C_{70}) particles. The calculation is based on the techniques of many-body physics (random-phase approximation, sum rules), affords a unified view of the dynamical response of microscopic clusters, and leads to good agreement with experimental data.

32368 (CEA-CONF-10848) **Annihilation characteristics in as-grown and electron irradiated Zn II-VI semiconductors.** Moser, P. (CEA Centre d'Etudes de Grenoble, 38 (France). Direction des Sciences de la Matiere); La Cruz, R.M. de; Pareja, R. CEA Centre d'Etudes de Grenoble, 38 (France). Direction des Sciences de la Matiere. 1991. 5p. (CONF-9109419-: 9. International Conference on Positron Annihilation, Budapest (Hungary), 26-30 Sep 1991). Order Number DE92566621. Source: OSTI; NTIS (US Sales Only); INIS.

The temperature dependence of the positron lifetime has been investigated in as-grown crystals of Zns, ZnSe and ZnTe over the temperature range 8-320 K. Also, isochronal annealing experiments up to 1175 K have been performed on these crystals. Zns and ZnSe crystals have been electron irradiated at room temperature and at 77 K. From the results in as-grown and annealed crystals, the values of (230±3), (240±5) and (266±3) ps are attributed to the positron lifetime in the bulk of Zns, ZnSe and ZnTe, respectively. 8 refs., 3 figs.

32369 (CEA-CONF-10849) **A recovery study of electron irradiated Al-Li alloys.** Moser, P. (CEA Centre d'Etudes de Grenoble, 38 (France). Direction des Sciences de la Matiere); Del

Rio, J.; Diego, N. de. CEA Centre d'Etudes de Grenoble, 38 (France). Direction des Sciences de la Matiere. 1991. 5p. (CONF-9109419–: 9. International Conference on Positron Annihilation, Budapest (Hungary), 26-30 Sep 1991). Order Number DE92566622. Source: OSTI; NTIS (US Sales Only); INIS.

Positron lifetime technique has been used to study the recovery processes in two electron-irradiated Al-Li alloys, having 1.7 and 9.9at%Li. According to the literature Li is in solid solution in the first alloy, while δ' precipitates (Al_3Li) are present in the second one. Isochronal annealing measurements have been performed at 77K from 77 to 400K, and the spectra have been satisfactorily analysed with one component in the whole temperature range. From the results in the as-irradiated samples it is inferred that electrons originate vacancy-Li complexes with a very similar structure in both alloys. The isochronal annealing measurements suggest that the recovery takes place by Li diffusion in the dilute alloy, whereas several processes are involved in the recovery of the concentrated alloy. 5 refs., 1 fig., 1 tab.

(CONF-9203188–: Interdisciplinary Conference on Dielectrics: properties, characterisation and applications, Antibes (France), 23-27 Mar 1992). Order Number DE93701259. Source: OSTI; NTIS (US Sales Only); INIS.

The lifetime measurement of positrons injected in a metal allows to investigate defects of atomic dimension. Many crucial problems in metallurgy have found their solutions by the positron annihilation (PA) techniques for about three decades. Application to semiconductors research has been developed in recent years. Specific theory and analysing method can be used in the studies of the free-volume hole in polymers, the size of the empty spaces being between 0.3 and 1.5 nanometers. In many insulating materials, the diffusing positron can trap an electron and form a metastable positronium (Ps). Like a gas bubble, the Ps atom may diffuse and get trapped by the free-volume hole. When this mechanism is governing, lifetimes over the range of 1-10 ns are well observable and a correspondence exists between the positronium lifetime and minimum diameter of the trapping open space. Example of application is given in a study of polyimide membranes used for gas separation. A good correlation is revealed between the Ps lifetime and H_2 and/or CH_4 permeabilities. Recent progress in polymers research is also reviewed.

32371 (CNIC–00367) **Transport processes of conversion electron in surface layers.** Yu Zhi (Nanjing Univ., JS (China). Dept. of Physics); Xia Yuanfu; Liu Rongchuan. China Nuclear Information Centre, Beijing, BJ (China). Jan 1990. 10p. (In Chinese). (NU–0006.). Order Number DE93603032. Source: OSTI; NTIS (US Sales Only); INIS.

Transportation of 7.3 keV K-conversion electron is simulated by a Monte Carlo method in different depth of iron film (1.0 nm ≈ 300.0 nm). The analysis of results has shown that when the depth of the film is greater than 150 nm, the electron emittance is very low. According to the relationship between the energy and angle and the depth, the energy of emitted electron can be detected, and the information the film depth can be obtained by detecting the angles of emitted electrons. Therefore, angular conversion electron Moessbauer spectroscopy (ACEMS) in iron film seems to be a new way for depth-selected layer investigation.

32374 (SAND–91-2592C) **An NMR study of the occupation of C_{60} interstitial sites by oxygen molecules.** Assink, R.A.; Loy, D.A.; Schirber, J.E.; Morosin, B. Sandia National Labs., Albuquerque, NM (United States). [1991]. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DP00789. (CONF-920402–50: Material Research Society spring meeting, San Francisco, CA (United States), 27 Apr - 2 may 1992). Order Number DE92019436. Source: OSTI; NTIS; INIS; GPO Dep.

The 13_C NMR of FCC C_{60} under magic angle spinning (MAS) conditions yields linewidths on the order of 1 Hz at fields of 4.7 T. The spectrum consists of a primary resonance at 143.7 ppm and a minor peak shifted 0.7 ppm downfield. The intensity of the minor resonance relative to the primary resonance was found to vary from 0.6 to 5.5 % depending on the sample history. The downfield shift obeys Curie's law and is attributed to the Fermi contact coupling interaction between paramagnetic oxygen molecules and all 60 carbon atoms of rapidly rotating adjacent C_{60} molecules. Exposure of the sample to 1 kbar oxygen for 1 3/4 hours resulted in a spectrum of 7 evenly spaced resonances corresponding to 0 to 6 of the adjacent octahedral interstitial sites being filled with oxygen molecules. At ambient pressure, the oxygen diffused out of the lattice on time scales ranging from hours to days.

6653 Interactions Between Beams and Condensed Matter

32375 (CEA-CONF–10490) **Electronic excitations in metallic systems: from defect annihilation to track formation.** Dunlop, A.; Lesueur, D. CEA-Ecole Polytechnique, 91 - Palaiseau (France). Lab. d'Etudes des Solides Irradies. 1991. 7p. (CONF-9111258–: 13. Werner Brandt Workshop on the Interaction of Charged Particles with Matter, Nara (Japan), 9-17 Nov 1991). Order Number DE92566719. Source: OSTI; NTIS (US Sales Only); INIS.

This paper presents an overview of the effects of high electronic energy deposition in metallic targets irradiated with GeV heavy ions. The main result of these investigations is that high electronic excitations lead to various and sometimes conflicting effects according to the nature of the target: - partial annealing of the defects induced by elastic collisions, - creation of additional disorder, - phase transformation (tracks formation and amorphization), - anisotropic growth. These different effects of high electronic energy deposition in metallic targets are probably manifestations at various degrees of the same basic energy transfer process between the excited electrons and the target atoms. Up to now no theoretical model explains these effects. 24 refs.

32376 (CRN-CPR–91-03) **Study of high energy ion implantation of boron and oxygen in silicon.** Thevenin, P. Strasbourg-1 Univ., 67 (France). Centre de Recherches Nucleaires; Strasbourg-1

Univ., 67 (France). Jun 1991. 134p. (In French). Order Number DE93701369. Source: OSTI; NTIS (US Sales Only); INIS.

Three aspects of high energy (0.5-3 MeV) light ions ($^{11}B^+$ and $^{16}O^+$) implantation in silicon are examined: (1)Spatial repartition; (2) Target damage and (3) Synthesis by oxygen implantation of a buried silicon oxide layer.

32377 (IPNO-DRE–91-16) **Impact of slow gold clusters on various solids: Non linear effects in secondary ion emission.** Benguerba, M. (Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire); Brunelle, A.; Della-Negra, S.; Depauw, J.; Joret, H.; Beyec, Y. Le; Blain, M.G.; Schweikert, E.A. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1991. 51p. Order Number DE92570060. Source: OSTI; NTIS (US Sales Only); INIS.

A liquid metal ion source has been installed on a pulsed ion gun. The time of flight (TOF) spectra of the pulsed beam were recorded. With the gold source several cluster ions (up to 10 atoms in the cluster) and doubly charged ions were identified in the ion beam TOF spectra. With a second pulsation, single cluster ions can be selected as projectiles for secondary ion TOF mass spectrometry. The secondary ion emission induced by cluster impact from a variety of targets (organic, CsI, metallic) was studied. A large enhancement of yield is observed by comparison to single atomic ion impact (e.g., a factor of 30 between Au_3^+ and Au^+). The secondary ion yields increase nonlinearly with the number of constituents in the cluster. A comparison with other types of clusters and also fission fragments of ^{252}Cf has been performed. The rate of secondary emission stimulated by cluster is similar to the secondary ion yield induced by fission fragments. (author) 47 refs., 18 figs., 5 tabs.

32378 (IPNO-DRE–91-19) **Ion desorption phenomena induced by various types of multiply charged projectiles and by photons on solid surfaces.** Beyec, Y. Le. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1991. 43p. (CONF-9108199–: Latin American school of physics, Caxambu (Brazil), 4-24 Aug 1991). Order Number DE92570063. Source: OSTI; NTIS (US Sales Only); INIS.

Ion desorption experiments are described in two regions of primary ion velocities corresponding to two distinct classes of interaction mechanism. At low speeds, atomic collisions take place, at higher speeds than the electron velocity, electronic collisions occur. Experiments with fast ions above 0.2 MeV/u are described, using ^{32}S and ^{235}U ions obtained in a cyclotron and a linear accelerator. Emission of H^+ ions from solid surfaces is measured and analyzed, and applied to the determination of the charge state of a fast ion in a solid. Experiments using single atomic and polyatomic, keV ions, and organic and CsI cluster ions as projectiles are also presented. Finally, laser desorption is discussed. (R.P.) 81 refs., 27 figs., 2 tabs.

32379 (LBL–32305) **14th international symposium on molecular beams.** Lawrence Berkeley Lab., CA (United States). [1992]. 439p. Sponsored by USDOE, Washington, DC (United States); Department of Defense, Washington, DC (United States); National Science Foundation, Washington, DC (United States). DOE Contract AC03-76SF00098. (CONF-9206174–: 14. international symposium on molecular beams, Pacific Grove, CA (United States), 7-12 Jun 1992). Order Number DE92017012. Source: OSTI; NTIS; INIS; GPO Dep.

This report discusses research being conducted with molecular beams. The general topic areas are as follows: Clusters I; reaction dynamics; atomic and molecular spectroscopy; clusters II; new techniques; photodissociation & dynamics; and surfaces.

32380 (LIYaF–90-1608) **Influence of neutron spin orientation on Laue diffraction in a non-centrosymmetric crystal.** Alekseev, V.L.; Voronin, V.V.; Lapin, E.G.; Leushkin, E.K.; Rumyantsev, V.L.; Fedorov, V.V. AN SSSR, Leningrad (Russian Federation). Inst. Yadernoj Fiziki. 1990. 12p. (In Russian). Order Number DE92645515. Source: OSTI; NTIS (US Sales Only); INIS.

Pendular fringes for the different spin-t - interplanar electric field orientations were measured. The theory of the effect is given. It is shown that for some crystal thicknesses the pendular frings should disappear for the cases of neutrons polarized along the electric field and for unpolarized neutrons. This effect is due to rotation in the opposits directions of the spins for different kinds of the neutron Bloch waves. When the angle between the spins becomes equal to π the waves stop to interfere and the pendular frings disappears. 5 refs.; 2 figs.; 1 tab.

Argonne National Lab., IL (United States). Jul 1992. 10p. Sponsored by USDOE, Washington, DC (United States); Midwest Superconductivity Consortium (United States). DOE Contract W-31109-ENG-38 ;FG02-86ER45247. (CONF-9208110–1: 33. Yamada conference on the application of high magnetic fields in semiconductor physics, Chiba (Japan), 3-7 Aug 1992). Order Number DE92019028. Source: OSTI; NTIS; GPO Dep.

A microscopic calculation of vortex-lattice states in two-dimensional electron systems at strong magnetic fields is made taking fully the Landau level quantization into account within the mean field scheme. Results of the order parameter and the local density of states are presented both in the limit of pairing in a single Landau level and in the semiclassical regime of weaker fields and differences from the Abrikosov vortex state are discussed.

32382 (BNL–52302, pp. 17-21) **Intermetallic superconductors - The state of development in 1991.** Forsyth, E. (Brookhaven National Lab., Upton, NY (United States)). Brookhaven National Lab., Upton, NY (United States). 27 Sep 1991. (CONF-9105133–: Workshop on technology issues of superconducting magnetically levitated (MAGLEV) transportation systems, Upton, NY (United States), 23-24 May 1991). In *Workshop on technology issues of superconducting Maglev transportation systems.* 142p. Order Number DE92002288. Source: OSTI; NTIS; INIS.

The commercial fabrication of intermetallic superconductors has reached a high degree of maturity in the past thirty years. The only significant, commercial requirement for superconducting wire is the construction of magnetic resonance imaging (MRI) devices for medical diagnosis. In addition to this demand there are one-time projects such as a high energy particle accelerators which often need considerable quantities of superconducting material over the few years of construction. R and D projects also provide a fluctuating market for superconducting materials, in the past the projects have included power apparatus such as generators, motors, energy storage and transmission cables, and magnets for experimental fusion reactors. Superconducting magnetically levitated trains have undergone full scale trials in Japan and Germany. This is by no means a comprehensive list of all the possible applications. Virtually all the devices requiring a magnetic field to be produced by superconducting windings have used NbTi wire, but a few experimental Nb_3Sn high field magnets have been constructed. In the case of these materials commercial vendors can provide a high degree of quality assurance on such characteristics as critical current, coupling effects and mechanical tolerances. This paper discusses the market for intermetallic and ceramic superconductors, their fabrication properties, applications, and cost.

32383 (CNIC–00446) **Development for specific heat measuring apparatus of high T_c superconductor in 80 $\approx$ 200 K temperature range.** Li Caiyun (Southwest Inst. of Physics, Leshan, SC (China)); Ren Lianzhi; Chen Rongguang; Gao Lixia; Teng Qiuan; Li Huanxing. China Nuclear Information Centre, Beijing, BJ (China). Nov 1990. 6p. (In Chinese). (SIP–0043.). Order Number DE93603071. Source: OSTI; NTIS (US Sales Only); INIS.

An apparatus for specific heat measurement is described. It can be used for measuring solid materials by heat leakage method. The specific heat of a standard sample α-Al_2O_3 had been measured. It corresponds to one of NBS and the measured deviation is better than ±1.8%. The accuracy is ±3% to measured superconducting sample $YBa_2Cu_3O_{7-x}$.

32384 (CNIC–00470) **Flux creep in fluorine-doping Bi-Pb-Sr-Ca-Cu-O bulk superconductor.** Cao Xiaowen (Academia Sinica, Hefei, AH (China). Inst. of Plasma Physics); Feng Shangshen; Gao Xiaohui; Wu Xiaoling; Yang Hui; Yin Zhoulan; Wei Qin. China Nuclear Information Centre, Beijing, BJ (China). Feb 1991. 9p. (In Chinese). (ASIPP–0023.). Order Number DE93603072. Source: OSTI; NTIS (US Sales Only); INIS.

The magnetization and the flux creep in the fluorine-doping Bi-Pb-Sr-Ca-Cu-O bulk superconductor have been experimentally studied. The experimental results exhibit some new behaviours and suggest that S dM/dlnt $\propto H^{1/2}$ for the fields 100 Oe $< H <$ 1000 Oe; $U_0(H) \propto \exp(-H/30)$ for the fields below 150 Oe and $U_0(H) \propto H^{-\alpha}$ with $\alpha = 3/2$ for the fields above 150 Oe.

32385 (CNIC–00472) **Characteristic of the flux pinning at intergrain boundaries in bulk Bi-Pb-Sr-Ca-Cu-O superconductors.** Wang Yugui (Academia Sinica, Hefei, AH (China). Inst. of Plasma Physics); Yang Yu; Xiong Xiaozhong; Yuan Songliu; Wang Shunxi. China Nuclear Information Centre, Beijing, BJ (China). Feb 1991. 10p. (ASIPP–0024.). Order Number DE93603073. Source: OSTI; NTIS (US Sales Only); INIS.

The magnetization measurement shows that there are two kinds of different intergrain boundaries in the sintered $Bi_{1.8}\ Pb_{0.34}\ Sr_{1.86}\ Ca_2\ Cu_3O_y$ superconductors. One has nearly no pinning force for flux line, the other can trap some flux line in the low field range where a pinning current may be sustained. When the applied field is removed, most of the remanent magnetization comes from the intergrain boundaries. The area of hysteresis loop at low field and the remanent magnetization for the cold-pressed bulk samples are significantly increased. Cold pressing results in aligning the grain orientation and raising the packing density, both of which enhanced intergrain coupling. The J_c value of 1040 A/cm^2 at H = 0 and 150 A/cm^2 at H = 1 k Oe are obtained. The flux creep along the intergrain boundaries and the pinning potential energy U_0 for the coldpressed samples are also discussed.

32386 (CNIC–00515) **Preparation of Y-Ba-Cu-O superconducting film above liquid nitrogen temperature.** Liu Jianmin (Southwest Inst. of Physics, Leshan, SC (China)); Gao Lixia; Tian Ying; Ma Mei. China Nuclear Information Centre, Beijing, BJ (China). Aug 1991. 6p. (In Chinese). (SIP–0046.). Order Number DE93603142. Source: OSTI; NTIS (US Sales Only); INIS.

The process for preparing Y-Ba-Cu-O system high T_c superconducting film using nitrates CVD pyrolysis method is introduced. The thickness of film is about 25 $\approx$ 70 μm, and its critical temperature is 79.37 K.

32387 (CONF-9205236–3) **Neutron scattering studies of the spin dynamics in $La_{2-x}Sr_xO_4$.** Hayden, S.M. (Bristol Univ. (United Kingdom). H.H. Wills Physics Lab.); Mason, T.E.; Aeppli, G.; Cheong, S.W.; Mook, H.A.; Fisk, Z. Oak Ridge National Lab., TN (United States). [1992]. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. From Conference on phase separation in cuprate superconductors; Sicily (Italy); 6-12 May 1992. Order Number DE92019952. Source: OSTI; NTIS; INIS; GPO Dep.

Inelastic neutron scattering has determined the modulation vectors and correlation lengths for the low-energy incommensurate magnetic fluctuations observed in $La_{2-x}Sr_xCu0_4$ for $x \gtrsim 0.075$. On entering the superconducting state a strong suppression of the low-energy fluctuations is observed. These results are discussed with reference to a two-dimensional band structure model.

32388 (ECN-C–91-067) **Ac losses test on Nb_3Sn strands.** Eikelboom, J.A. Netherlands Energy Research Foundation (ECN), Petten (Netherlands). Oct 1991. 24p. Contract no. 91-267. Order Number DE93603143. Source: OSTI; NTIS; INIS.

This research has been performed under NET contract during period March-August 1991.

Measurements reported here are a continuation of the research performed under previous contract with NET (NET contract no./ 88-186, ECN report C–91-018). The purpose is to measure fundamental ac loss properties of superconducting wires and composite cables. Several firms were contracted by NET to manufacture niobium-tin wires that can meet current NET specifications with respect to hysteresis losses and coupling losses. Due to planned dismantling of the test facilities at ECN, experiments had to take place before August 1991. Due to the delay in the delivery of the strand material by industry only one specific wire manufactured by Teledyne Wah Chang Albany has been measured. The wire samples were prepared and heat treated at ECN. Specific questions about the coupling loss behaviour of full size cabled conductors remained after the conclusion of the research under the previous NET contract. A large difference was observed between cable samples with and without the steel jacket. Possible explanations are a different compaction of the cable or coupling currents flowing by way of the jacket. In order to investigate this matter two additional cable samples were manufactured and were measured at ECN. The conductor for the US-DPC coil was also tested. (author). 24 refs.; 24 figs.; 8 tabs.

32389 (IC–92/136) **Nonclassical disordered phase in the strong quantum limit of frustrated antiferromagnets.** Ceccatto, H.A. (International Centre for Theoretical Physics, Trieste (Italy)); Gazza, C.J.; Trumper, A.E. International Centre for Theoretical Physics, Trieste (Italy). Jul 1992. 10p. Order Number DE92645691. Source: OSTI; NTIS (US Sales Only); INIS.

The Schwinger boson approach to quantum helimagnets is discussed. It is shown that in order to get quantitative agreement with exact results on finite lattices, parity-breaking pairing of bosons must be allowed. The so-called $J_1 - J_2 - J_3$ model is studied, particularly on the special line $J_2 = 2J_3$. A quantum disordered phase is found between the Neel and spiral phases, though notably only in the strong quantum limit S = 1/2, and for the third-neighbor coupling $J_3 \geq 0.038\ J_1$. For spins $S \geq 1$ the spiral phase goes continuously to an antiferromagnetic order. (author). 19 refs, 3 figs.

32390 (LA-UR–92-1844) **Bipolaronic charge density waves, polaronic spin density waves and high $T_c$superconductivity.** Aubry, S. Los Alamos National Lab., NM (United States). [1992]. 33p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9205236–2: Conference on phase separation in cuprate superconductors, Sicily (Italy), 6-12 May 1992). Order Number DE92017403. Source: OSTI; NTIS; GPO Dep.

At large enough electron phonon coupling, the existence of bipolaronic, polaronic and mixed states is rigorously proven for the adiabatic Holstein model at any dimension and any band filling. The ground-state is one of them which then prove the existence of insulating Bipolaronic Charge Density Waves. The role of the quantum lattice fluctuations is analysed and found to be neglegible in that regime but to become essential in case of phonon softening then favoring the occurence of superconductivity. When a strong Hubbard term is also present, the bipolarons break into polorons and the ground state is expected to be a polaronic spin density wave. If the repulsive Hubbard term is comparable to the electron-phonon coupling, the energy for breaking a bipoloron into two polarons can become small and we get instead of these two degenerate structures, a pait of polarons bounded by a spin resonance which we call "spin resonant bipolaron". This resonant bipolaron is still strongly bound, but the role of the quantum lattice fluctuations becomes now very important and yields a sharp broadening of the bandwidth of this resonant bipolarona. Thus, the strong quantum character of these resonant bipolarons could prevent their localization into real space structures which could be insulating bipolaronic CDWs or polaronic SDWS, then favoring the formation of a superconducting coherent state with a possible high T_c.

32391 (LA-UR–92-2864) **Transport and magnetization currents in BSCCO/Ag tapes.** McHenry, M.E. (Los Alamos National Lab., NM (United States)); Kung, P.J.; Maley, M.P.; Willis, J.O.; Coulter, J.Y. Los Alamos National Lab., NM (United States). [1992]. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-920802–1: Applied superconductivity conference, Chicago, IL (United States), 23-28 Aug 1992). Order Number DE92040357. Source: OSTI; NTIS; INIS; GPO Dep.

A (Bi,Pb)SrCaCuO-2223/Ag tape has been produced by thermomechanical processing. Transport J_c's have been measured between H = 0 and 7 T and T = 7 to 75 K. Magnetization currents,

$J(H,T)$, have been determined for similar temperatures and fields (0 to 5 T) oriented parallel and orthogonal to the thickness of the tape. Dimensional scaling arguments show that flux penetrates most quickly along the tape thickness direction (for fields parallel to the tape plane and therefore the ab planes of the textured BSCCO grains). This implies that the anisotropy ratio of J_c and J_{ab} is reduced in tapes as compared with single crystals consistent with predictions of the brick wall model. Also measured were the H dependence of magnetization currents, ${J^{H\perp c}}_{ab}$ and ${J^{H\parallel c}}_{ab}$ and effective pinning potentials, $U_{eff}(J)$, for similar field orientations. Fast magnetic relaxation causes an exponential field dependences $J/J_c \propto \exp(-H/H_0)$ of transport and magnetization currents consistent with a divergent $U_{eff}(J)$ as $J \rightarrow 0$. Temperature dependences for H_0 for transport and magnetization measurements are interpreted in terms of different time scales (or voltage criteria); for H_0 in two field orientations are explained by a directionally dependent $U_{eff}(J_{ab})$.

32392 (SAND–92-0216C) **Steady-state cooling of a high-temperature superconducting motor.** Dykhuizen, R.C. (Sandia National Labs., Albuquerque, NM (United States)); Bickel, T.C.; Baca, R.G.; Kempka, S.N.; Skocypec, R.D.; Edick, J.D.; Schiferl, R.F.; Jordan, H.E. Sandia National Labs., Albuquerque, NM (United States). [1992]. 18p. Sponsored by USDOE, Washington, DC (United States); Electric Power Research Inst., Palo Alto, CA (United States). DOE Contract AC04-76DP00789. (CONF-921110–4: Winter annual meeting of the American Society of Mechanical Engineers, Anaheim, CA (United States), 8-13 Nov 1992). Order Number DE92012624. Source: OSTI; NTIS; GPO Dep.

Development of a high-temperature, superconducting, synchronous motor for large applications (>1000 hp) could offer significant electrical power savings for industrial users. Presently 60% of all electric power generated in the United States is utilized by electric motors. A large part of this power is utilized by motors 1000 hp or larger. The use of high-temperature superconducting materials with critical temperatures above that of liquid nitrogen (77 K) in the field winding would reduce the losses in these motors significantly, and therefore, would have a definite impact on the electrical power usage in the US. These motors will be 1/3 to 1/2 the size of conventional motors of similar power and, thus, offer potential savings in materials and floor space. The cooling of the superconducting materials in the field windings of the rotor presents a unique application of cryogenic engineering. The rotational velocity results in significant radial pressure gradients that affect the flow distribution of the cryogen. The internal pressure fields can result in significant nonuniformities in the two-phase flow of the coolant. A multiphase flow computer model of the cryogenic cooling is developed to calculate the boiling heat transfer and phase distribution of the nitrogen coolant in the motor. The model accounts for unequal phase velocities and nonuniform cooling requirements of the rotor. Model results indicate a factor of 10 difference in the flow through axial coolant channels as a function of radius. The effect of this flow distribution needs to be accounted for in the design of the motor. Continuing improvements on the model will allow the investigation of the transient thermal issues associated with localized quenching of the superconducting components of the motor.

32393 (DOE/ER/52149–4) **Fluid dynamics of supercritical helium within cable-in-conduit conductors: Progress report.** Van Sciver, S.W. Wisconsin Univ., Madison, WI (United States). 1 Jul 1992. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-88ER52149. Order Number DE92019516. Source: OSTI; NTIS; GPO Dep.

The enclosed report summarizes work carried out under DOE/MFE Support, during the past four years. Emphasis is placed on progress within the last year. Results of experiments on pressure drop and heat transfer within several Cable-in-Conduit Conductors are described. These results are compared to models for flow in similar geometries. The work provides a basis for design of magnets using the CIC Conductor Concept.

32394 (CEA-CONF–10856) **Experimental program on the 20 TW laser system.** Watteau, J.P. CEA Centre d'Etudes de Limeil, 94 - Villeneuve-Saint-Georges (France). 1991. 20p. (CONF-9111127–: 33. annual Division of Plasma Physics/American Physical Society (DPP/APS) meeting, Tampa, FL (United States), 4-8 Nov 1991). Order Number DE92566725. Source: OSTI; NTIS (US Sales Only); INIS.

Pulses of 20 TW have been generated at 1064 nm using the Chirped Pulse Amplification technique coupled to a 90 mm output aperture powerful Nd:silicate glass amplification line. This system delivers 60 J in a chirped pulse of 600 ps duration with a capacity of maintaining 3.5 nm output band width. These chirped pulses are compressed to 1.2 ps with an energy of 24 J using large holographic gold coated 1740 lines/mm diffraction gratings. In a first step, the beam is focused on target using an aspherical 640 mm focal lens. The maximum measured irradiance is limited to 10^{18} W/cm^2 by auto focusing effects in the air pass and in the lens; higher values up to 10^{19} W/cm^2 will need propagation of the compressed beam in vacuum and focusing by reflective optics. The first experiments deal with laser-plasma coupling X-ray generation and influence of power contrast. Further plans included multiple Compton scattering and X-ray laser generation. Some theoretical work on ionization processes and particle acceleration are also presented.

32395 (CNIC–00328) **The suppression of multiple tearing modes using helical field.** Wang Maoquan (Academia Sinica, Hefei, AH (China). Inst. of Plasma Physics). China Nuclear Information Centre, Beijing, BJ (China). Dec 1989. 19p. (In Chinese). (ASIPP–0014.). Order Number DE93602961. Source: OSTI; NTIS (US Sales Only); INIS.

The suppression of the tearing modes by resonant helical field (RHF) is analyzed and calculated numerically. The nonlinear interactions between the tearing modes were considered. It is shown that the couplings of different modes can or can't destabilize the tearing modes. This is related to certain conditions. Because of the interactions the $l = 2$ RHF can stabilize all modes and the $l = 3$ RHF in the case of multiple tearing modes is noneffective, only in the single mode approximation it can suppresses the $m = 3$ mode.

32396 (CNIC–00369) **The calculations of magnetic diffusion constant and Kolmogorov entropy in a stochastic field region.** Wang Maoquan (Academia Sinica, Hefei, AH (China). Inst. of Plasma Physics). China Nuclear Information Centre, Beijing, BJ (China). Nov 1989. 18p. (In Chinese). (ASIPP–0018.). Order Number DE93602951. Source: OSTI; NTIS (US Sales Only); INIS.

The magnetic field within a stochastic field region is statistically described. A Hamiltonian governing the motion of system and a distribution function describing the probability distribution of equilibrium magnetic line of force are proposed. The perturbation distribution function can be obtained by solving Liouville equations one by one, and the magnetic diffusion constant and Kolmogorov entropy can be calculated by using distribution function. The numerical results show that the diffusion constant and entropy obtained by this method are in good agreement with those of direct dynamical computations.

32397 (CNIC–00381) **Excitation adjustable system of toroidal field waveform for tokamak HL-1.** Ren Juqian (Southwest Inst. of Physics, Leshan, SC (China)); Yu Xianrong; Xie Yongzhong. China Nuclear Information Centre, Beijing, BJ (China). Nov 1989. 12p. (In Chinese). (SIP–0039.). Order Number DE93602944. Source: OSTI; NTIS (US Sales Only); INIS.

The closed-loop adjusting system of the toroidal field waveform is described. Technical measures have been taken to improve the stability of the system and the repetitiveness of wave adjustment. Meanwhile the wiring and technical characteristics of the system are discussed and the level of the system attained is compared with that of the original system.

32398 (CNIC–00435) **The time-space structure evolution of tokamak plasma under the mutual interactions of tearing mode with transport process.** Zhang Cheng (Academia Sinica, Hefei, AH (China). Inst. of Plasma Physics); Deng Xiaohua; Huo Yuping. China Nuclear Information Centre, Beijing, BJ (China). Jul 1990. 14p. (In Chinese). (ASIPP–0020.). Order Number DE93602962. Source: OSTI; NTIS (US Sales Only); INIS.

A theoretical study of the evolution of tearing modes in tokamak plasma is presented. Combining the tearing mode with a 1-D transport code, computer simulations are conducted. The result shows that the transport process plays an important role in the development of the macro-instability. Under the mutual interaction of macro-instability and transport process, the MHD pattern of tokamak presents various space and time structures. That also gives rise to the time and space behavior of other plasma parameters such as temperature and density.

32399 (CNIC–00466) **Characteristics of low-q discharge on HT-6B tokamak.** Li Guoxiang (Academia Sinica, Hefei, AH (China). Inst. of Plasma Physics); Li Linzhong; Xie Jikang. China Nuclear Information Centre, Beijing, BJ (China). Dec 1990. 8p. (In Chinese). (ASIPP–0022.). Order Number DE93602963. Source: OSTI; NTIS (US Sales Only); INIS.

When operating at low q region, the plasma in HT-6B tokamak still has well confinement property. The disruption at $q(a) \leq 2.0$ has some features. There are three kinds of disruptions i.e. major disruption, soft disruption and sawtooth-like disruption. The strong sawtooth oscillation leads to broaden the distribution of plasma parameters that causes the m 2/n = 1 kink mode increasing on the edge of the plasma. The low q disruption is closely related to the m = 2/n = 1 mode increasing and sawtooth disruption. It will be possible to operate a tokamak with high β in low q region if the low q disruption is governed by controlling the distribution of the plasma parameters and sawtooth oscillation.

32400 (CNIC–00475) **Hard X-ray measurement on HT-6B tokamak.** Yin Xiejin (Academia Sinica, Hefei, AH (China). Inst. of Plasma Physics); Li Linzhong; Li Wuping; Zhou Licheng; Zhao Junyu; Liang Rongqing. China Nuclear Information Centre, Beijing, BJ (China). May 1991. 5p. (In Chinese). (ASIPP–0025.). Order Number DE93602964. Source: OSTI; NTIS (US Sales Only); INIS.

The hard X-ray intensity has regularly being monitored in various discharge conditions on HT-6B tokamak. In low-q region operation, the emitted hard X-ray spectra at different phases were measured and compared. The comparison of sawtooth oscillations of hard X-rays and soft X-rays was completed. Recently, in the low hybrid current driven (LHCD) experiment both hard X-rays emitted from bulk plasma and bremsstrahlung out of thick targets on the limiter were simultaneously observed. The preliminary results show that the mechanisms of producing hard X-rays and bremsstrahlung are different.

32401 (CNIC–00493) **Observation of spatial resolution of ECR plasma on the MM-2 magnetic mirror.** Duan Shuyun (Southwest Inst. of Physics, Leshan, SC (China)); Gu Biao; Guan Weishu; Cheng Shiqing; Liu Rong; Chen Kangwei; Shang Zhenkui. China Nuclear Information Centre, Beijing, BJ (China). Apr 1991. 9p. (In Chinese). (SIP–0045.). Order Number DE93602948. Source: OSTI; NTIS (US Sales Only); INIS.

The measuring method and results of the ECR plasma properties taken from hard X-ray pinhole camera on the MM-2 magnetic mirror are presented. This non-destructive imaging method can directly display the spatial distribution of hot electron plasma. A frame of clear picture could be taken at one shot of discharge. The relationships between emission intensity and discharge parameters are also shown by experimental pictures.

32402 (CONF-920419–Absts.) **International Sherwood fusion theory conference.** Los Alamos National Lab., NM (United States). [1992]. 230p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. From International Sherwood fusion theory conference; Santa Fe, NM (United States); 6-8 Apr 1992. Order Number DE92018756. Source: OSTI; NTIS; INIS; GPO Dep.

This report contains the abstracts of the papers being presented at the International Sherwood Fusion Theory Conference. (LSP).

32403 (CONF-920913–7) **Theoretical basis for advanced plasma configurations.** Jardin, S.C. (Princeton Univ., NJ (United States). Plasma Physics Lab.); Chance, M.S.; Cowley, S.C.; Ignat, D.W.; Pomphrey, N.; Kessel, C.; Manickam, J.; Monticello, D.A.; Perkins, F.W.; Reiman, A.H.; Rutherford, P.H.; Valeo, E.J.; Bhattacharjee, A.; laconColumbia Univ., New York, NY (United States). Short communication. TOKAMAK DEVICES/bootstrap current; CURRENT DENSITY; MHD EQUILIBRIUM; DESIGN

32404 (CONF-9209181–1) **Biasing experiments on the Advanced Toroidal Facility.** Uckan, T. (Oak Ridge National Lab., TN (United States)); Isler, R.C.; Jernigan, T.C.; Lyon, J.F.; Mioduszewski, P.K.; Murakami, M.; Rasmussen, D.A.; Wilgen, J.B.; Aceto, S.C.; Zielinski, J.J. Oak Ridge National Lab., TN (United States). [1992]. 22p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. From International Atomic Energy Agency (IAEA) technical committee meeting on tokamak plasma biasing; Montreal (Canada); 8-10 Sep 1992. Order Number DE92040033. Source: OSTI; NTIS; INIS; GPO Dep.

Biasing experiments have been carried out in 1 T plasmas with ~200 kill of electron cyclotron heating (ECH) in the current-fire Advanced Toroidal Facility (ATF) torsatron. Two rail limiters, one at the top and one at the bottom of the device, located at the last closed flux surface (LCFS), are, biased at positive and negative potentials with respect to the vacuum vessel. When the limiters are positively biased at up to 300 V and the plasma density is controlled with a significantly reduced gas feed, the Hα radiation from both the limiter and the wall drops, indicating reduced particle recycling as a result of improved particle confinement. For bias voltages around +100 V, there is almost no change of plasma stored energy W_p, but W_p then drops with the higher biasing voltages. Positive biasing has caused the core plasma density profile to become peaked and the electric field to' become more negative inside the LCFS. At the same time, edge plasma fluctuations are reduced significantly and their power spectrum becomes less broad. The propagation direction of these electrostatic fluctuations reverses to the ion diamagnetic direction, and their wavelengths become longer. The resulting fluctuation-induced particle flux is also reduced. Power deposition on the limiters is lower as a result of reduced edge plasma density and temperature. Negative biasing yields somewhat less improvement in the particle confinement while having almost no apparent effect on W_p or on the core and the edge plasma density and temperature profiles. Simultaneous measurements of the plasma potential profile indicate almost no significant change. Biasing has almost no effect on the intrinsic impurity levels in the plasma.

32405 (CONF-921125–1) **Performance of a plasma fluid code on the Intel parallel computers.** Lynch, V.E. (Martin Marietta Energy Systems, Inc., Oak Ridge, TN (United States)); Carreras, B.A.; Drake, J.B.; Leboeuf, J.N.; Liewer, P. Oak Ridge National Lab., TN (United States). [1992]. 26p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. From ACM/IEEE supercomputing conference; Minneapolis, MN (United States); 14-21 Nov 1992. Order Number DE92011680. Source: OSTI; NTIS; INIS; GPO Dep.

One approach to improving the real-time efficiency of plasma turbulence calculations is to use a parallel algorithm. A parallel algorithm for plasma turbulence calculations was tested on the Intel iPSC/860 hypercube and the Touchtone Delta machine. Using the 128 processors of the Intel iPSC/860 hypercube, a factor of 5 improvement over a single-processor CRAY-2 is obtained. For the Touchtone Delta machine, the corresponding improvement factor is 16. For plasma edge turbulence calculations, an extrapolation of the present results to the Intel σ machine gives an improvement factor close to 64 over the single-processor CRAY-2.

32406 (CTH-IEFT-PP–1992-01) **Vortices in nonuniform upper-hybrid field.** Davydova, T.A. (Inst. for Nuclear Research, Ukrainian Academy of Sciences, Kiev (Ukraine)); Vranjes, J.

Chalmers Univ. of Technology, Goeteborg (Sweden). Inst. for Electromagnetic Field Theory and Plasma Physics. 1992. 20p. Order Number DE92645304. Source: OSTI; NTIS; INIS.

The equations describing the interaction of an upper-hybrid pump wave with small low-frequency density perturbations are discussed under assumption that the pump is spatially nonuniform. The conditions for the modulational instability are investigated. Instead of a dispersion relation, describing the growth of perturbations in the case of an uniform pump, in our case of nonuniform pump a differential equation is obtained and from its eigenvalues are found the instability criteria. Taking into account the slow-frequency self-interaction terms some localized solutions similar to dipole vortices are found, but described by analytic functions in all space. It is shown that their characteristic size and speed are determined by the pump intensity and its spatial structure. (au).

32407 (CTH-IEFT-PP–1992-02) **Vortices with a nonuniform group velocity.** Vranjes, J. (Inst. for Electromagnetic Field Theory, Chalmers Univ. of Technology, Goeteborg (Sweden)); Weiland, J. Chalmers Univ. of Technology, Goeteborg (Sweden). Inst. for Electromagnetic Field Theory and Plasma Physics. 1992. 9p. Order Number DE92645305. Source: OSTI; NTIS; INIS.

An equation describing vortices produced by a spatially nonuniform upper-hybrid pump wave, in an inhomogeneous plasma, is derived. The vortex group velocity is assumed to be spatially nonuniform and the consequences of this assumption are discussed. (au).

32408 (CTH-IEFT-PP–1992-03) **Plasma temperature and density dynamics including particle and heat pinch effects.** Wilhelmsson, H. Chalmers Univ. of Technology, Goeteborg (Sweden). Inst. for Electromagnetic Field Theory and Plasma Physics. 1992. 13p. Order Number DE92645306. Source: OSTI; NTIS; INIS.

The spatial and temporal evolutions of temperature and density of plasmas, governed by coupled nonlinear diffusion equations with source terms and finite boundary effects, are studied by means of a central expansion technique for 'bell-shaped' plasma profiles. Four coupled first order nonlinear equations in time are obtained for the amplitudes (central values) and widths of the temperature and density distributions. The roles played by the various processes, considering also particle and heat pinch effects, are discussed and the conditions for possible equilibria are formulated. (au).

32409 (CTH-IEFT-PP–1992-05) **Nonlinear shaping of a two-dimensional ultrashort ionizing pulse.** Sergeev, A. (Institute of Applied Physics, Nizhnyj Novgorod (Russia)); Vanin, E.; Stenflo, L.; Anderson, D.; Lisak, M.; Quiroga-Teixeiro, M.L. Chalmers Univ. of Technology, Goeteborg (Sweden). Inst. for Electromagnetic Field Theory and Plasma Physics. 1992. 17p. Order Number DE92645307. Source: OSTI; NTIS; INIS.

A theoretical description of ultrashort ionizing wave pulses is presented by means of two different models where the ionization rate increases or decreases, respectively, as a function of the electric field amplitude. We show that the pulse evolves either into a horseshoe or a horn-type structure in the time-space domain. In some parameter regions the intensity of the pulse can also increase. (au).

32410 (DOE/ER/13727–T2) **Self-generated stochastic heating in an rf discharge: Annual progress report, May 15, 1991–May 14, 1992.** Lichtenberg, A. California Univ., Berkeley, CA (United States). Electronics Research Lab. [1992]. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG03-87ER13727. Order Number DE92018558. Source: OSTI; NTIS; GPO Dep.

We have studied the nonlinear dynamics of stochastic heating arising from the reflection of electrons from moving sheaths as an underlying mechanism for electron power deposition in r.f. discharges. We examined the dynamics of the electron collision with the sheaths in the regime in which the sheath motion is small compared to the average electron velocity to de rive a mop that describes the electron motion. We have shown that for high frequency, ($\omega/2\pi \gtrsim 50$MHz), the electrons will strike the moving wall with random phase. At low pressures this stochasticity is an intrinsic property of the dynamics. The stochastic electron heating leads to a power law electron distribution. The stochastic heating was determined in both the slow sheath and fast sheath velocity regimes assuming an incident Maxwellian distribution.

32411 (DOE/ER/53198–201) **Measurement of current density fluctuations and ambipolar particle flux due to magnetic fluctuations in MST.** Shen, Weimin. Wisconsin Univ., Madison, WI (United States). Aug 1992. 119p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-85ER53198. Order Number DE92041013. Source: OSTI; NTIS; INIS; GPO Dep.

Studies of magnetic fluctuation induced particle transport on Reversed Field Pinch plasmas were done on the Madison Symmetric Torus. Plasma current density and current density fluctuations were measured using a multi-coil magnetic probes. The low frequency (f<50 kHz) current density fluctuations are consistent with the global resistive tearing instabilities predicted by 3-D MHD simulations. At frequencies above 50 kHz, the magnetic fluctuations were detected to be localized with a radial correlation length of about 1–2 cm. These modes are locally resonant modes since the measured dominant mode number spectra match the local safety factor q. The net charged particle flux induced by magnetic fluctuations was obtained by measuring the correlation term $<\tilde{j}_{\parallel}\ \tilde{B}_r>$. The result of zero net charged particle loss was obtained, meaning the flux is ambipolar. The ambipolarity of low frequency global tearing modes is satisfied through the phase relations determined by tearing instabilities. The ambipolarity of high frequency localized modes could be partially explained by the simple model of Waltz based on the radial average of small scale turbulence.

32412 (DOE/ER/53198–202) **Current density fluctuations, nonlinear coupling, and transport in MST.** Prager, S.C.; Almagri, A.F.; Assadi, S.; Cekic, M.; Chapman, B.E.; Crocker, N.; Den Hartog, D.J.; Dexter, R.N.; Fiksel, G.; Fonck, R.J.; Henry, J.S.; Hokin, S.A.; Holly, D.J.; Ji, H.; Rempel, T.D.; Sarff, J.S.; Scime, E.; Shen, W.; Sidikman, K.L.; Sprott,.Wisconsin Univ., Madison, WI (United States). Dept. of Physics. Sep 1992. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-85ER53198. (IAEA-CN–56/C-3-1;CONF-920913–10: 14. international conference on plasma physics and controlled nuclear fusion research, Wuerzburg (Germany), 30 Sep - 7 oct 1992). Order Number DE92041012. Source: OSTI; NTIS; INIS; GPO Dep.

New information on magnetic fluctuations and transport in toroidal devices has been obtained in the MST reversed field pinch through measurement of nonlinear coupling of three waves in k-space, and measurement of current density fluctuations. Measurements of nonlinear coupling of magnetic fluctuations reveals that (1) two poloidal mode number m = 1 modes couple strongly to an m = 2 mode, (2) toroidal mode coupling is broad extending up to n = 20, (3) these features agree with predictions for tearing fluctuations from a nonlinear MHD code, (4) during a sawtooth crash the number of modes involved in nonlinear interactions increases dramatically and the k-spectrum broadens simultaneously. Measurements of current density fluctuations over the outer 20% of the minor radius reveal that (1) low frequency fluctuations are consistent with tearing modes, (2) high frequency fluctuations are localized turbulence which maintains resonance with the equilibrium field as q changes with radius, (3) particle transport from magnetic fluctuations is ambipolar (i.e., $<\delta j_{\parallel} B_r> = O$).

32413 (DOE/ER/53198–203) **Anomalous ion heating and superthermal electrons in the MST reversed-field pinch.** Hokin, S.; Almagri, A.; Assadi, S.; Cekic, M.; Chapman, B.; Chartas, G.; Crocker, N.; Cudzinovic, M.; Den Hartog, D.J.; Dexter, R.; Fiksel, G.; Fonck, R.; Henry, J.; Holly, D.; Prager, S.; Rempel, T.; Sarff, J.; Scime, E.; Shen, W.; Sprott, C.; Stoneking,.Wisconsin Univ., Madison, WI (United States). Dept. of Physics. Sep 1992. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-85ER53198. (IAEA-CN–56/C-3-2;CONF-920913–9: 14. international conference on plasma physics and controlled nuclear fusion research, Wuerzburg (Germany), 30 Sep - 7 oct 1992). Order Number DE92041011. Source: OSTI; NTIS; INIS; GPO Dep.

Anomalous ion heating and superthermal electron populations have been studied in the MST reversed-field pinch. The ion heating is much stronger than that given by classical electron-ion friction, and is particularly strong during dynamo bursts. The heating displays a marked density dependence: in a 350-kA discharge with a maximum $\bar{n} = 0.9 \times 10^{13}$ cm^{-3}, T_i rises sharply as $\bar{n}$ drops below $0.4 \times 10_{13}$ cm^{-3} late in the discharge. Superthermal electrons are produced in the core, with temperatures of T_{eh}, = 350–700 eV while the bulk core temperature is T_{eo} = 130–230 eV. The fraction of superthermal electrons decreases with increasing density, from 40% at $\bar{n} = 0.5 \times 10^{13}$ cm^{-3} to 8% at $\bar{n} = 1.9 \times 10^{13}$ cm^{-3} at I = 350 kA. However, data with similar plasma parameters but higher oxygen impurity content had a lower T_{eh} and higher hot fraction. The edge superthermal electron distribution is well fit by a drifted bi-Maxwellian distribution with $T_{\parallel} \sim T_{e0}$ and relative drift speed $v_d/v_{th} = 0.4$. With the assumption that the parallel heat flux measured with a pyroelectric probe is carried by superthermal electrons, the measured electron current is consistent with $T_{\perp} \sim T_{es} \sim T_{e0}/3$ and accounts for over half of the total edge parallel current measured with magnetic probes.

32414 (DOE/ER/53223–180) **Tokamak equilibria and transport based on Grad's thirteen moment description.** Tippett, M.K. New York Univ., NY (United States). Courant Inst. of Mathematical Sciences. Jun 1992. 103p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-86ER53223. (MF–124). Order Number DE92019960. Source: OSTI; NTIS; INIS; GPO Dep.

In this thesis, I study collisional transport of a hot magnetically confined plasma in a tokamak. The weakly collisional plasma is modeled by Grad's two-fluid thirteen moment equations. This model provides a better treatment of the stresses and the heat fluxes than do collisional fluid models such as Braginski's. Using physical parameters for a typical tokamak, I estimate the orders of magnitude of various effects. I obtain a reduced system by neglecting small terms in the two-fluid thirteen moment equations. This reduced model includes small particle flows, pressure anisotropy and temperature variation within flux surfaces. The reduced model is compared with standard fluid models. To understand better the behavior of solutions of this system, I expand the solution in a formal series in powers of the small parameter $(m_e/m_i)^{1/4}$. Flux coordinates are used to solve the equations in a general axisymmetric geometry. In lowest order, the equilibrium solution consists of a number of arbitrary flux functions together with a Grad-Shafranov equation relating the poloidal flux and the toroidal current. The energy dynamics of the system is complicated and requires determining the solution to high order. As corrections to the lowest order solution are calculated, the equilibrium is extended to successively longer time scales until on the time scale $\tau_e m_i/m_e$, time independent solutions are in general not possible. I calculate the time evolution of the lowest order solution on the time scale $\tau m_i/m_e$, a time scale consistent with experiment.

32415 (DOE/ER/53223–194) **Plasma properties: Progress report for 1991.** Weitzner, H. New York Univ., NY (United States). Courant Inst. of Mathematical Sciences. Aug 1992. 42p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-86ER53223. Order Number DE92019982. Source: OSTI; NTIS; INIS; GPO Dep.

This report discusses the following topics: MHD Equilibrium and Stability; MHD Transport; Statistical Analysis; Edge Physics Studies; Wave Propagation; Basic Plasma Physics; and Space Plasma Physics.

32416 (DOE/ER/53225–T3) **Application of computer modeling to fusion research: Progress report, November 1, 1991–October 31, 1992.** Dawson, J.M. California Univ., Los Angeles, CA (United States). This report discusses the following topics: gyrokinetic modeling; gyrokinetic physics problems run; boot strap current; and investigations of parallel computing. (LSP).

32417 (DOE/ER/53279–2) **Plasma Science Committee (PLSC) and study on new opportunities in plasma science and technology: Technical progress report, July 15, 1991–May 31, 1992.** National Academy of Sciences, Washington, DC (United States). Board on Physics and Astronomy. [1992]. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-88ER53279. Order Number DE92019507. Source: OSTI; NTIS; INIS; GPO Dep.

The Plasma Science Committee (PLSC) of the National Research Council (NRC) is charged with monitoring the health of the field of plasma science in the United States. Accordingly, the Committee identifies and examines both broad and specific issues affecting the field. Regular meetings, teleconferences, briefings from agencies and the scientific community, the formation of study panels to prepare reports, and special symposia are among the mechanisms used by the PLSC to meet its charge. This progress report presents a review of PLSC activities from July 15, 1991 to May 31, 1992. The details of prior activities are discussed in earlier reports. This report also includes the status of activities associated with the PLSC study on opportunities in plasma science and technology. During the above period, the PLSC has continued to track and participate in, when requested, discussions on the health of the field. Much of the perspective of the PLSC has been presented in the recently-published report Research Briefing on Contemporary Problems in Plasma Science. That report has served as the basis for briefings to representatives of the federal government as well as the community-at-large. In keeping with its charge to identify and highlight specific areas for scientific and technological opportunities, the PLSC completed publication of the report Plasma Processing of Materials: Scientific and Technological Opportunities and launched a study on new opportunities in plasma science and technology.

32418 (DOE/ET/53088–556) **Fast ion-driven Bernstein instabilities.** Chen, K.R. Texas Univ., Austin, TX (United States). Inst. for Fusion Studies. 20 Jul 1992. 14p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-80ET53088. (IFSR–556). Order Number DE92019393. Source: OSTI; NTIS; INIS; GPO Dep.

We investigate a new mechanism, the two-energy-stream cyclotron instability, for fast ions (e.g., fusion products) to drive electrostatic waves and to slow down. The instability comes from a relativistic effect, which dominates conventional phase overtaking as the axial phase velocity exceeds the speed of light. Both a single particle model and a dispersion relation are developed in order to illuminate the physics insights and scaling laws. We present numerical results and discuss nonlinear processes. The mechanism is essential for the dynamics of the fast ions in both D-D and D-T devices.

32419 (DOE/ET/53088–560) **Nonlinear studies of m = 1 modes in high-temperature plasmas.** Aydemir, A.Y. Texas Univ., Austin, TX (United States). Inst. for Fusion Studies. Jul 1992. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-80ET53088. (IFSR–560). Order Number DE92019395. Source: OSTI; NTIS; INIS; GPO Dep.

Nonlinear evolution of the m = 1 mode is examined in high-temperature plasmas where the mode is in the semi-collisional or collisionless regime. Unlike the resistive m = 1 mode, both the semi-collisional mode, with a very weak resistivity dependence, and the collisionless mode, driven by finite electron inertia, can be robustly unstable in today's large tokamaks. And unlike the finite-$\Delta'(m \geq 2)$ tearing modes, the nonlinear evolution of which is collisional, both the semi-collisional and collisionless m = 1 modes exhibit nonlinearly enhanced growth rates that far exceed their linear values, thus making their nonlinear evolution collisionless; this accelerated growth of a collisionless m = 1 mode may explain the fast sawtooth-crashes observed in large tokamaks.

32420 (DOE/ET/53088–561) **The electrostatic wake of a superthermal test electron in a magnetized plasma.** Ware, A.A.; Wiley, J.C. Texas Univ., Austin, TX (United States). Inst. for Fusion Studies. Jul 1992. 16p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-80ET53088. (IFSR–561). Order Number DE92019394. Source: OSTI; NTIS; INIS; GPO Dep.

The electrostatic potential is determined for a test electron with $v_{\parallel} \gg v_{Te}$, in a uniform magnetized plasma ($\omega_{ce} \gg \omega_{pe}$). In the frame of the test electron, part of the spatially oscillatory potential has spherical symmetry over the hemisphere to the rear of the electron and is zero ahead of the electron. A second part of different character, which makes the potential continuous at the plane containing the electron, is oscillatory in the radial direction but decreases almost monotonically in the axial direction.

32421 (DOE/ET/53088–565) **Fusion, magnetic confinement.** Berk, H.L. Texas Univ., Austin, TX (United States). Inst. for Fusion Studies. 6 Aug 1992. 109p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-80ET53088. (IFSR–565). Order Number DE92019876. Source: OSTI; NTIS; INIS; GPO Dep.

An overview is presented of the principles of magnetic confinement of plasmas for the purpose of achieving controlled fusion conditions. Sec. 1 discusses the different nuclear fusion reactions which can be exploited in prospective fusion reactors and explains why special technologies need to be developed for the supply of tritium or ^{3}He, the probable fuels. In Sec. 2 the Lawson condition, a criterion that is a measure of the quality of confinement relative to achieving fusion conditions, is explained. In Sec. 3 fluid equations are used to describe plasma confinement. Specific confinement configurations are considered. In Sec. 4 the orbits of particle sin magneti and electric fields are discussed. In Sec. 5 stability considerations are discussed. It is noted that confinement systems usually need to satisfy stability constraints imposed by ideal magnetohydrodynamic (MHD) theory. The paper culminates with a summary of experimental progress in magnetic confinement. Present experiments in tokamaks have reached the point that the conditions necessary to achieve fusion are being satisfied.

32422 (EUR-CEA-FC–1442) **Lower hybrid current drive experiments in Tore Supra.** Moreau, D. TORE SUPRA Team. Association Euratom-CEA, Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-lez-Durance (France). Dept. de Recherches sur la Fusion Controlee. Dec 1991. 38p. (CONF-9111127–: 33. annual Division of Plasma Physics/American Physical Society (DPP/APS) meeting, Tampa, FL (United States), 4-8 Nov 1991). Source: OSTI; NTIS (US Sales Only); INIS.

Two large multi junction launchers have allowed to couple up to 6 MW to the plasma. The current drive efficiency was about 2 x 10^{19} Am^{-2}/W with LH power alone at a volume-averaged electron temperature of 1.4 keV. Experiments with combined LHCD and ion cyclotron resonant heating allowed to inject up to 7.5 MW into the plasma. The electron energy content followed fairly well the Rebut-Lallia scaling law. At $n_e = 1.5 \times 10^{19}$ m^{-3}, sawteeth were suppressed and m = 1 MHD oscillations appeared. The central electron temperature then reached 8 keV for 3.6 MW injected. LH power modulation experiments performed at $n_e = 4 \times 10^{19}$ m^{-3} showed a delayed central electron heating despite the off-axis creation of suprathermal electrons, thus ruling out the possibility of direct heating through central wave absorption. Successful pellet fueling of a partially LH driven plasma was obtained, in which 28 successive pellets could penetrate up to half radius as in ohmic discharges, with 50 to 80% of the pellet content deposited in the plasma. First attempts to combine LHCD with ergodic divertor discharges showed that, when the plasma edge was subject to a radial magnetic perturbation smaller than the ergodicity threshold, a strong stationary radiation (MARFE) was triggered, locked near the inner wall. The radiated power then amounted to 90% of the total input power with no indication of a radiative collapse.

32423 (EUR-CEA-FC–1443) **Lower hybrid wave coupling in Tore Supra through multi junction launchers.** Litaudon, X.; Berger By, G.; Bibet, P.; Bizarro, J.P.; Capitain, J.J.; Carrasco, J.; Goniche, M.; Hoang, G.T.; Kupfer, K.; Magne, R.; Moreau, D.; Peysson, Y.; Rax, J.M.; Rey, G.; Rigaud, D.; Tonon, G. Association Euratom-CEA, Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-lez-Durance (France). Dept. de Recherches sur la Fusion Controlee. Jan 1992. 46p. Source: OSTI; NTIS (US Sales Only); INIS.

The TORE SUPRA Lower Hybrid Current Drive experiments (8 MW/3.7GHz) use large phased waveguide arrays, to couple the waves to the plasma. These launchers are based on the multi junction principle. Extensive coupling measurements have been performed in order to study the Radio-Frequency (RF) characteristics of the plasma loaded antennae and are reported. Measurements of the plasma scattering coefficients of the antennae show good agreement with those obtained from the linear coupling theory (SWAN code). Global reflection coefficients of a few percents have been measured in a large range of edge plasma densities or antenna positions, and up to a maximum injected RF power density of 45MW/m^2. When the plasma is pushed against the inner wall of the chamber, the reflection coefficient was found to remain low up to distances of the order of 10 cm. The coupling measurements allow us to deduce the experimental power spectra radiated by the antennae when all their modules are fed simultaneously with variable phases. An assessment of the multi junction launcher as a viable antenna for high power transmission with good coupling characteristics and spectrum control is thus made.

32424 (EUR-CEA-FC–1444) **The Beasts' model of percolative transport.** Dubois, M.A.; Beaufume, P.; Fromont, B. Association Euratom-CEA, Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-lez-Durance (France). Dept. de Recherches sur la Fusion Controlee. Dec 1991. 17p. Source: OSTI; NTIS (US Sales Only); INIS.

A class of nonlinear dynamical systems is introduced: it is aimed to be a tool in order to study anomalous transport and percolation phenomena. We study a simple example of this system, and explore different regimes of transport exhibited.

32425 (EUR-CEA-FC–1445) **Anharmonicity in resonant perturbations and its effect on stochasticity extension.** Hennequin, P.; Dubois, M.A.; Nakach, R. Association Euratom-CEA, Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-lez-Durance (France). Dept. de Recherches sur la Fusion Controlee. Dec 1991. 12p. Source: OSTI; NTIS (US Sales Only); INIS.

We analyse the effect of the separatrix shape on stochasticity onset and on diffusion in the two waves system, and in particular the role of the separatrix angle at the X-point. Introducing anharmonicity in the expression of the perturbation, we can adjust this angle, and eventually have it go to zero. We show that, in this latter case, stochasticity appears much sooner and that the diffusion coefficient is strongly enhanced. Applications to specific physical problems are discussed.

32426 (GA-A–21007) **Fusion programs in Applied Plasma Physics: Contract extension report, October 1, 1991–January 31, 1992.** General Atomics, San Diego, CA (United States). Jul 1992. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-89ER53277. Order Number DE92019639. Source: OSTI; NTIS; INIS; GPO Dep.

Magnetic Fusion Research Program.

The Applied Plasma Physics (APP) program at General Atomics (GA) described here includes four major elements: (a) Applied Plasma Physics Theory Program, (b) Alpha Particle Diagnostic, (c) Edge and Current Density Diagnostic, and (d) Fusion User Service Center (USC). The objective of the APP theoretical plasma physics research at GA is to support the DIII-D and other tokamak experiments and to significantly advance our ability to design a commercially-attractive fusion reactor. We categorize our efforts in three areas: magnetohydrodynamic (MHD) equilibria and stability; plasma transport with emphasis on H-mode, divertor, and boundary physics; and radio frequency (rf). The objective of the APP alpha particle diagnostic is to develop diagnostics of fast confined alpha particles using the interactions with the ablation cloud surrounding injected pellets and to develop diagnostic systems for reacting and ignited plasmas. The objective of the APP edge and current density diagnostic is to first develop a lithium beam diagnostic system for edge fluctuation studies on the Texas Experimental Tokamak (TEXT). The objective of the Fusion USC is to continue to provide maintenance and programming support to computer users in the GA fusion community. The detailed progress of each separate program covered in this report period is described in the following sections.

32427 (INP-MSU–90-58-204) **Observation of fast neutrons and tritium during electrolysis of heavy water.** Kuz'min, R.N.; Sakharov, E.M.; Shvilkin, B.N.; Kuprin, A.P.; Revokatov, P.O. Moskovskij Gosudarstvennyj Univ., Moscow (Russian Federation). Nauchno-Issledovatel'skij Inst. Yadernoj Fiziki. 1990. 12p. (NIIYaF-MGU–90-58-204.). Order Number DE92645357. Source: OSTI; NTIS (US Sales Only); INIS.

Fast neutron and tritium was observed from Pd and Ti electrodes during electrolysis in D_2O. The quality estimation of effect is suggested. 4 refs.; 4 figs.

32428 (JAERI-M–92-057) **Numerical analysis of gas puff modulation experiment on JT-60U.** Nagashima, Keisuke (Japan Atomic Energy Research Inst., Naka, Ibaraki (Japan). Naka Fusion Research Establishment); Sakasai, Akira. Japan Atomic Energy Research Inst., Tokyo (Japan). Mar 1992. 14p. Order Number DE93703577. Source: OSTI; NTIS; INIS.

In tokamak transport physics, source modulation experiments are one of the most effective methods. For an analysis of these modulation experiments, a simple numerical method was developed to solve the general transport equations. This method was applied to gas puff modulation experiments on JT-60U. From the comparison between the measured and calculated density perturbations, it was found that the particle diffusion coefficient is about 0.8 m^2/sec in the edge region and 0.1-0.2 m^2/sec in the central region. (author).

32429 (JINR-D–13-91-200) **Correlation experiments on checking the existence of low temperature nuclear fusion in titanium and zirconium deuterides.** Artyukhov, V.I. (Moskovskij Khimiko-Tekhnologicheskij Inst., Moscow (Russian Federation)); Bystritskij, V.M.; Gilev, A.I. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Nuclear Problems. 1991. 14p. Order Number DE92645358. Source: OSTI; NTIS (US Sales Only); INIS.

The paper deals with checking the hypothesis of low temperature nuclear dd-fusion (LTF) in titanium and zirconium deuterides. The technique of detection of neutrons and acoustic emission resulting from saturation of the above materials with deuterium was used. The experiments with titanium and zirconium deuteride samples were carried out in the temperature range from 80 to 400 K. In all exposures the neutron counting was not observed to exceed the background level, and the time correlation between the moments when neutrons and acoustic transducer signals appear was not found either. The upper limits of the dd-fusion rate in titanium and zirconium deuterides per deuteron pair were estimated at the 90% confidence level on the assumption of LTF existence: $\lambda_{dd}{}^{Ti} \leq 10^{-25}$ $s^{-1}x(dd)^{-1}$, $\lambda_{dd}{}^{Zr} \leq 3x10^{-25}$ $s^{-1}x(dd)^{-1}$. 32 refs.; 8 figs.

32430 (JINR-D–15-91-289) **Observation of neutron bursts in saturation of titanium with deuterium by means of D_2O electrolysis.** Artyukhov, V.I. (Moskovskij Khimiko-Tekhnologicheskij Inst., Moscow (Russian Federation)); Bystritskij, V.M.; Gilev, A.I. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Nuclear Problems. 1991. 14p. Order Number DE92645359. Source: OSTI; NTIS (US Sales Only); INIS.

The paper describes a correlation experiment on investigation of low-temperature nuclear dd-fusion during saturation of titanium with deuterium through electrolysis of heavy water D_2O. The experiments with cathodes of chemically pure titanium and of titanium coated with a 0.4μm nickel layer (mass of titanium 26 g) were carried out. Emission of neutrons in the form of separate bursts was observed in the experiments with the nickel-coated cathode. The neutron emission density in the burst was found to be $I_n=(3.6 \pm 0.9)x10^4 s^{-1}$. 17 refs.; 6 figs.

32431 (JINR-D–15-91-290) **Experimental observation of neutron emission insaturation of titanium chips with gaseous deuterium.** Artyukhov, V.I. (Moskovskij Khimiko-Tekhnologicheskij Inst., Moscow (Russian Federation)); Bystritskij, V.M.; Gilev, A.I. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Nuclear Problems. 1991. 10p. Order Number DE92645360. Source: OSTI; NTIS (US Sales Only); INIS.

An experiment on investigation of low-temperature nuclear dd-fusion in saturation of titanium chips (86%+6%Al+6%V+2%Sn) with gaseous deuterium was carried out. Emission of neutrons (produced in dd-fusion reactions) in the form of separate sporadic bursts was observed. The neutron emission density in the burst was found to be $I_n=(3.0 \pm 0.9)x10^4 s^{-1}$. The neutron burst duration was estimated to be $\tau \approx 300 \mu s$. The measurements were carried out while the target was naturally heated from the liquid nitrogen temperature (78 K) to room temperature (300)K. 7 refs.; 4 figs.

32432 (LA-UR–92-2390) **Measurements of excess heat from a Pons-Fleischmann type electrolytic cell using palladium sheet.** Storms, E.K. Los Alamos National Lab., NM (United States). [1992]. 33p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9210151–1: 3. cold fusion technology conference, Nagoya (Japan), 21-25 Oct 1992). Order Number DE92018604. Source: OSTI; NTIS; GPO Dep.

Two pieces of palladium sheet were loaded with deuterium in a Pons-Fleischmann type electrolytic cell and measurements were made of heat production. One sheet produced a steady increase in excess power that reached 7.5 watts (20% of input power) before the study was interrupted. A second similar sheet from a different batch of palladium did not produce any measurable excess power. There was a difference between the loading behavior, the maximum stoichiometry, and the presence of excess volume in the deuteride made from these materials. The first sheet contained 0.8% excess volume after deloading from D/Pd=0.82 to D/Pd=0.73, and the second sheet contained 13.5 % excess volume while at D/Pd=0.75. The high excess volume in the latter case is an indication of internal cracks.

32433 (ORNL/TM–12075) **Effects of limiter biasing on the ATF torsatron.** Uckan, T. (Oak Ridge National Lab., TN (United States)); Baylor, L.R.; Bell, J.D.; Bigelow, T.S.; England, A.C.; Harris, J.H.; Isler, R.C.; Jernigan, T.C.; Lyon, J.F.; Ma, C.H.; Mioduszewski, P.K.; Murakami, M.; Rasmussen, D.A.; Wilgen, J.B.; Aceto, S.C.;.Oak Ridge National Lab., TN (United States). Sep 1992. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE92041363. Source: OSTI; NTIS; INIS; GPO Dep.

Positive limiter biasing on the currentless Advanced Toroidal Facility (ATF) torsatron produces a significant increase in the particle confinement with no improvement in the energy confinement. Experiments have been carried out in 1-T plasmas with ~400 kill of electron cyclotron heating ECM. Two rail limiters located at the last closed flux surface (LCFS), one at the top and one at the bottom of the device, are biased at positive and negative potentials with respect to the vessel. When the limiters are positively biased at up to 300 V, the density increases sharply to the ECH cutoff value. At the same time, the H_α radiation drops, indicating that the particle confinement improves. When the density is kept constant, the H_α radiation is further reduced and there is almost no change in the plasma stored energy. Under these conditions, the density profile becomes peaked and the electric field becomes outward-pointing outside the LCFS and more negative inside the LCFS. In contrast, negative biasing yields some reduction of the density and stored energy at constant gas feed, and the plasma potential profile remains the same. Biasing has almost no effect on the intrinsic impurity levels in the plasma.

32434 (PPPL–2850) **Observation of ballooning instabilities with medium toroidal mode number in high temperature tokamak plasmas.** Nagayama, Y. (Princeton Univ., NJ (United States). Plasma Physics Lab.); Manickam, J.; Fredrickson, E.D.; Bell, M.; Budny, R.V.; Cavallo, A.; Janos, A.C.; McGuire, K.M.; Taylor, G.; Yamada, M.; Sabbagh, S.A.; Mauel, M.E.; Navratil, G.A. Princeton Univ., NJ (United States). Plasma Physics Lab. Aug 1992. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03073 ;FG02-89ER53297. Order Number DE92018962. Source: OSTI; NTIS; INIS; GPO Dep.

A beta degradation event in a high βp, TFTR tokamak plasma is analyzed with X-ray and electron cyclotron emission (ECE) imaging techniques. Medium-n (toroidal mode number) instabilities with ballooning characteristics are observed near and within the q =1.5 surface during a slow degradation in the plasma β and precede a sudden partial collapse in the central plasma pressure. This is the first reported observation of a ballooning instability in the interior of a large, collisionless tokamak plasma.

32435 (PPPL-CFP–2654) **Transport in a stochastic magnetic field.** White, R.B. (Princeton Univ., NJ (United States). Plasma Physics Lab.); Wu, Yanlin; Rax, J.M. Princeton Univ., NJ (United States). Plasma Physics Lab. [1992]. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03073. (CONF-9207112–2: 2. symposium on plasma dynamics, Trieste (Italy), 8-10 Jul 1992). Order Number DE92018445. Source: OSTI; NTIS; INIS; GPO Dep.

Collisional heat transport in a stochastic magnetic field configuration is investigated. Well above stochastic threshold, a numerical solution of a Chirikov-Taylor model shows a short-time nonlocal regime, but at large time the Rechester-Rosenbluth effective diffusion is confirmed. Near stochastic threshold, subdiffusive behavior is observed for short mean free paths. The nature of this subdiffusive behavior is understood in terms of the spectrum of islands in the stochastic sea.

32436 (TRITA-EPP--91-02) **Preliminary observations of electromagnetic radiation from plasma in presence of a double layer.** Lindberg, L. Royal Inst. of Tech., Stockholm (Sweden). Dept. of Plasma Physics. Oct 1991. 20p. Order Number DE92645314. Source: OSTI; NTIS; INIS.

In earlier laboratory investigations of a double layer a plasma region with an intense, spontaneous HF-generation was observed by means of internal HF-probes. The region was located 50-200 Debyelengths from the double layer, on the high potential side. It was concluded that the HF-field is generated by beam-plasma interaction, and can best be classified as electrostatic Langmuir waves. Such a wave field should in first approximation not radiate electromagnetic waves. The present paper reports on electromagnetic radiation in the near-field region outside the plasma, measured by means of small, electrostatically shielded loop-probes. At the electron gyro frequency, a broad peak is seen in the spectrum, with spatial maximum outside the region of internal HF-generation. Unexpectedly the azimuthal magnetic HF-component is stronger than the axial component. At the plasma frequency (higher than the gyro frequency, and less well defined) a broad range of HF emission is seen, extending to the upper hybrid frequency. The spatial maximum is outside the region of intense interaction, and the axial component dominates, suggesting oscillations at the upper hybrid frequency. Groups of intensity peaks are also seen near the upper hybrid frequency. Probe design, shielding and calibration technique is described. (au).

32437 (ANL/FPP/TM--258) **User's manual for the ARMLID (Argonne metallic lithium/isotopic dilution) tritium assay system.** Porges, K.G.; Bretscher, M.M.; Bennett, E.F.; Dilorio, G.; Mattas, R.F.; Lewandowski, E.F. Argonne National Lab., IL (United States). Aug 1992. 152p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. Order Number DE92040950. Source: OSTI; NTIS; INIS; GPO Dep.

The Argonne Metallic Lithium - Isotopic Dilution (ARMLID) system described in this report, originally developed at ANL for other purposes, was recently redeployed to measure the tritium production rate (TPR) in a series of US/Japanese collaborative fusion blanket integral experiments, involving large assemblies of fusion breeder blanket materials that were irradiated with a fusion neutron source at FNS/JAERI, Japan. Whereas previous uses of the ARMLID scheme involved just a few samples, its application infusion blanket TPR mapping called for large sample numbers per experiment, implying a commensurate scale of sample fabrication and encapsulation, on one hand, and tritium extraction and counting on the other hand. To shorten the time required for these various tasks, yet still yield reliable and accurate results, both the sample fabrication - encapsulation facility and the tritium extraction system had to be extensively revised from original versions that were designed for accuracy, but not necessarily for speed. The present report describes overall revisions in sufficient detail to serve as a User's Manual for this facility, and/or suggest how a new system might be put together. Either possibility may develop in the near future, in support of ITER design studies. Preliminary and partial descriptions of various aspects and features of the system were presented orally, in the course of annual ANL/JAERI/UCLA "workshops", over the last 34 years, as well as elsewhere.

32438 (ANL/FPP/TM--260) **Modeling of tritium behavior in Li$_2$O.** Billone, M.C.; Attaya, H.; Kopasz, J.P. Argonne National Lab., IL (United States). Fusion Power Program. Aug 1992. 72p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. Order Number DE92041358. Source: OSTI; NTIS; INIS; GPO Dep.

The TIARA and DISPL2 codes are being developed at Argonne National Laboratory to predict tritium retention and release from lithium ceramics under steady-state and transient conditions, respectively. Tritium retention and release are important design and safety issues for tritium-breeding blankets of fusion reactors. Emphasis has been placed on tritium behavior in Li$_2$O because of the selection of this ceramic as a first option for the ITER driver blanket and because of the relatively good material properties data base for Li$_2$O. Models and correlations for diffusion, surface desorption/adsorption, and solubility/precipitation of tritium in Li$_2$0 have been developed based on well-controlled laboratory data from as-fabricated and irradiated samples. With the models and correlations, the codes are validated to the results of in-reactor purge flow tests. The results of validation of TIARA to tritium retention data from VOM-15H, EXOTIC-2, and CRITIC-1 are presented, along with predictions of tritium retention in BEATRIX-II. For DISPL2, results are presented for tritium release predictions vs. data for MOZART, CRITIC-1, and BEATRIX-II. Recommendations are made for improving both the data base and the modeling to allow extrapolation with reasonable uncertainty levels to fusion reactor design conditions.

32439 (CEA-CONF--10857) **ICF related experiments at CEL-V.** Andre, M.; Coutant, J.; Dautray, R.; Decroisette, M.; Duborgel, B.; Lachkar, J.; Ouvry, J.; Schurtz, G.; Watteau, J.P. CEA Centre d'Etudes de Limeil, 94 - Villeneuve-Saint-Georges (France). 1991. 23p. (CONF-9110326--: European conference on laser interaction with matter (ECLIM), Warsaw (Poland), 21-25 Oct 1991). Order Number DE92566726. Source: OSTI; NTIS (US Sales Only); INIS.

Implosion experiments performed at Centre d'Etudes de Limeil-Valenton in the indirect drive scheme using the two-beams Nd glass laser facility Phebus at the energy level $\simeq$ 6 kJ (blue light) are presented. A final density of compressed DT close to 100 ρ_0 has been obtained. Phebus has also been equipped with an optical fibre oscillator, to study the effect of a smoothing technique on coupling processes: at 0.53 μm, absorption efficiency is increased by $\simeq$15-20%. With the eight beams Octal laser, hydrodynamic instabilities development in accelerated planar targets has been investigated both for direct and indirect drive. Atomic physics in laser plasmas is also deeply studied; a particular effort has been made on absorption spectroscopy which is a powerful diagnostic of ionization dynamics in cold and dense plasmas. In order to reach fuel ignition conditions, much powerful lasers, in the range of megajoule, will be needed. Their design needs further technological developments in order to reduce the capital cost. At Limeil, we work mainly on high damage threshold optical coatings, using the sol-gel process, high quality - low cost mirror fabrication, using the replica technics and incoherent laser pulse generation for beam smoothing.

32440 (CEA-CONF--10938) **Technology and component development for a closed tritium cycle.** Hircq, B. (CEA Centre d'Etudes de Bruyeres-le-Chatel, 91 (France)); Penzhorn, R.D.; Anderson, J.; Haange, R.; Meikle, A.; Naruse, Y. CEA Centre d'Etudes de Bruyeres-le-Chatel, 91 (France). 1991. 27p. (CONF-9106310--: 2. international symposium on fusion nuclear technology and exposition, Karlsruhe (Germany), 2-7 Jun 1991). Order Number DE93701263. Source: OSTI; NTIS (US Sales Only); INIS.

A brief summary on recent advances in the field of tritium technology concerning the most important subsystems of the fuel cycle of a fusion reactor, i.e. the plasma exhaust pumping system, the exhaust gas clean up system, the isotope separation, the tritium storage and the tritium extraction from a blanket is provided. Experimental results, single component developments, and technical tests including those with relevants amounts of tritium that constitute the basis of proposed integral process concepts are described. 48 refs.

32441 (CEA-CONF--10939) **LIPSIE experiment: Pb17Li irradiation in water loop with on line tritium measurements.** Thevenot, G. (CEA Centre d'Etudes de Saclay, 91 - Gif-sur-Yvette (France). Dept. de Mecanique et de Technologie); Lefevre, F.; Estrade, J.; Roche, M.; Flament, T.; Terlain, A. CEA Centre d'Etudes de Saclay, 91 - Gif-sur-Yvette (France). Dept. de Mecanique et de Technologie. 1991. 7p. (CONF-911111--: International conference on fusion reactor materials, Clearwater, FL

(United States), 17-22 Nov 1991). Order Number DE93701261. Source: OSTI; NTIS (US Sales Only); INIS.

Within the framework of the European Fusion Technology Programme a water cooled lithium-lead blanket is developed. One of the crucial issues is the tritium production control. The main object of the LIPSIE experiment is to study tritium permeation through externally water cooled steel walls and the possibility of tritium extraction generated in Pb17Li eutectic alloy by bubbling device. The ISABELLE 4 loop in the OSIRIS reactor is used for Pb17Li irradiation with tritium measurements on line in the coolant water and in the capsule.

32442 (CEA-CONF--10946) **The european programme on negative ion beam development.** Pamela, J. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-lez-Durance (France). Dept. de Recherches sur la Fusion Controlee); Hemsworth, R.; Jacquot, C.; Hopman, H.; Holmes, A.J.T. Association Euratom-CEA, Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-lez-Durance (France). Dept. de Recherches sur la Fusion Controlee. 1991. 5p. (CONF-9111260--: I.A.E.A. Technical Committee Meeting on Negative Ion Based Neutral Beam Injector, Naka (Japan), 11-13 Nov 1991). Order Number DE93701251. Source: OSTI; NTIS (US Sales Only); INIS.

The European Programme on Negative Ion Beam development consists presently of three main tasks: (i) the DRAGON experiment starting at Culham, with the objective of accelerating 4 A of D^- to 200 keV; (ii) the conceptual study of a 1 MV, 15 A power supply, conducted in european industry under the supervision of Cadarache; (iii) the design study of a 1MV, 4 A, deuterium test bed at Cadarache, conducted by the EURATOM-CEA Association (Cadarache) with support from the EURATOM-UKAEA association (Culham) and the FOM institute (Amsterdam). The conclusions of these three tasks are to be brought together during the first half of 1992, in order to prepare a proposal for a 1 MV, 4 A, deuterium test bed. Other experimental activities are being conducted in european laboratories, either directly related to the main programme (RF source and plasma neutralizer at Culham; discharge pulsing at Dublin and FOM-Amsterdam) or under separate contracts (energy recovery and cesium seeding at Cadarache).

32443 (CEA-CONF--10947) **Design study of a 1 MV, 4 A, D-test bed in european community.** Pamela, J. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-lez-Durance (France). Dept. de Recherches sur la Fusion Controlee); Hemsworth, R.; Jacquot, C.; Hopman, H.; Holmes, A.J.T. Association Euratom-CEA, Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-lez-Durance (France). Dept. de Recherches sur la Fusion Controlee. 1991. 10p. (CONF-9111260--: I.A.E.A. Technical Committee Meeting on Negative Ion Based Neutral Beam Injector, Naka (Japan), 11-13 Nov 1991). Order Number DE93701253. Source: OSTI; NTIS (US Sales Only); INIS.

The design study of a 1 MV, 4 A, D^-, > 30 seconds, test bed is being conducted by the EURATOM-CEA association (Cadarache) with support from the EURATOM-UKAEA association (Culham) and from FOM-Amsterdam. A proposal for the construction of this test bed at Cadarache will be made by the middle of next year. The options chosen for the beamline are derived from the conceptual design originally proposed one year ago by A. Holmes et al. for the ITER neutral beam systems: pure volume negative ion production, electrostatic multi-stage accelerator, vertically subdivided beamline, electrostatic deflection of the ions at the neutralizer exit, HV vacuum insulation with voltage grading screens. This design has been reviewed in detail and in particular three basic topics have been carefully examined: beam acceleration, gas flow and beam transmission. This review resulted in various changes with respect to the original design, the major change being the decision to put the ion source at high voltage. In parallel to this test bed design study, the conceptual study of a 1 MV, 15 A power supply and of its protection system is conducted by european industrial companies under the supervision of Cadarache.

32444 (CEA-CONF--10948) **First results on D- production in the joint CEA-JAERI experiment at Cadarache.** Pamela, J. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-lez-Durance (France). Dept. de Recherches sur la Fusion Controlee); Fumelli, M.; Jequier, F.; Hanada, M.; Okumura, Y.; Watanabe, K. Association Euratom-CEA, Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-lez-Durance (France). Dept. de Recherches sur la Fusion Controlee. 1991. 9p. (CONF-9111260--: I.A.E.A. Technical Committee Meeting on Negative Ion Based Neutral Beam Injector, Naka (Japan), 11-13 Nov 1991). Order Number DE93701255. Source: OSTI; NTIS (US Sales Only); INIS.

In a joint CEA-JAERI experiment performed at Cadarache. D^- and H^- beams have been studied at 100 keV energies in long pulses. In pure volume production, 0,5 A of D^- and 0.92 A of H^- ions accelerated at 100 keV have been transmitted unto a narrow target (13 cm wide, at 3 m distance). With Cesium seeding in the plasma generator, more than 2 A of D^- have been accelerated at 100 keV of energy and a calorimetric target signal as high as 1.85 A of D^- has been obtained. Cesium seedings allowed also to reduce the operating pressure by a factor 1/5 and extracted electrons by a factor 1/2. These results constitute a significant progress in the development of D^- beams in view of meeting ITER NB requirements. This experiment has also been used to study beam optics in various conditions, which will be useful to further validate negative ion extraction codes. Some features, like edge effects observed in a large aspect ratio accelerator and good results obtained with beamlet merging may constitute valuable informations for conducting the design of the ITER D^- beam accelerator.

32445 (CFFTP-G--9127) **Canadian ceramic breeder sphere-pac technology: Capability and recent results.** Sullivan, J.D. (Atomic Energy of Canada Ltd., Chalk River, ON (Canada). Chalk River Nuclear Labs.); Brayman, C.L.; Verrall, R.A.; Miller, J.M.; Gierszewski, P.J.; Londry, F.; Slavin, A. Canadian Fusion Fuels Technology Project, Toronto, ON (Canada). May 1991. 19p. (CONF-9106310--: 2. international symposium on fusion nuclear technology and exposition, Karlsruhe (Germany), 2-7 Jun 1991). Order Number DE93603008. Source: OSTI; NTIS (US Sales Only); INIS.

Sphere-pac ceramic breeders have been under development in Canada for several years. The goal is to fabricate and characterize these materials for use in engineering test reactors and subsequent fusion power reactors. Practical application of sphere-pac beds requires close consideration of both properties and fabrication. The present emphasis of the program is on 1-3 mm diameter Li_2ZrO_3 spheres, with future development of binary beds planned. Litre quantities have been produced by methods that are applicable to high production rates. These spheres are being tested for measurements of bulk properties (e.g., thermal conductivity, gas permeability, packing density, tritium release, specific heat) and long-term irradiation exposure. This paper summarizes the status of the work.

32446 (CNIC--00464) **The anomalous transport caused by magnetic perturbation in tokamak.** Wang Maoquan (Academia Sinica, Hefei, AH (China). Inst. of Plasma Physics). China Nuclear Information Centre, Beijing, BJ (China). Dec 1990. 16p. (ASIPP--0021.). Order Number DE93603005. Source: OSTI; NTIS (US Sales Only); INIS.

The distributive probability of magnetic field lines in stochastic field region may be obtained by Liouville equation, by which the statistical average of any physical quantity relating to magnetic field can be given. A method to compute contribution of magnetic perturbations to the anomalous transport is developed. On certain conditions, the momentum equation can be changed into Langevin equation and the fluid element can be regarded as huge molecule in Brownian motion, and then the transfer probability and diffusion coefficient can be obtained by statistical moment. The result indicated that on the same conditions, the anomalous diffusion caused by magnetic perturbation is larger than the classical diffusion and much smaller than Bohm diffusion. At the very high temperature (T > 8 keV) the contribution of magnetic perturbation to anomalous transport is very small.

32447 (CNIC--00480) **Numerical simulation for HT-6M tokamak electrical transient behaviours.** Yu Yuanqi (Academia Sinica, Hefei, AH (China). Inst. of Plasma Physics); Liu Baohua; Pan Yuan. China Nuclear Information Centre, Beijing, BJ (China). Feb 1991. 12p. (ASIPP--0026.). Order Number DE93602996. Source: OSTI; NTIS (US Sales Only); INIS.

The following main points are concerned: (1) State equations used for dynamic analysis of all electrical parameters of the tokamak are derived. (2) In order to increase plasma volt-seconds and to get plasma current with longer sustainment phase, a power supply scheme for HT-6M and its numerical simulation are studied. (3) The distribution of energy flow in coupling loops of the tokamak is discussed, and the energy transfer ratio from the OH loop and vertical field loop to the plasma is also analyzed.

32448 (DOE/ER/53280–6) **Annual performance report for "A program of FRC theory research".** Krall, N.A. Krall Associates, Del Mar, CA (United States). 15 May 1992. 63p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG03-88ER53280. (KA–92-07). Order Number DE92018557. Source: OSTI; NTIS; INIS; GPO Dep.

The original activities carried out under this Grant were specific to the Fusion scheme known as the Field Reversed Configuration (FRC). With the decisions of the Department of Energy to deemphasize experimental activity in the areas known as "alternate concepts," we have generalized our studies. Since the research we have perfomed on the FRC led us into the area of high beta ($8\pi nT/B^2$) and large orbits, we have chosen to emphasize those areas of plasma physics. The relevance to the mainline fusion program will emerge as our understanding of these areas develops. This statement may not be obvious, but it reflects my observations, developed over the last thirty-two years of fusion research, of how progress is made in this complex field. During the present contract period, we have undertaken three specific studies on large orbit and high β physics which have reached a point of near completion. One of these studies has demonstrated that in large orbit systems collisional relaxation to a Maxwellian distribution proceeds at a surprisingly slow rate, because of the competing effects of collisions which tend to make a local Maxwellian, which in a large orbit system can make remote regions more non-Maxwellian. A second study reopens the problem of confinement of plasma by a cusp magnetic field. Thirdly we note that the separatrix in the FRC can lead the plasma into an x-point on the cyclindrical axis of that devices.

32449 (ECN-C–91-036) **Shielding calculations for NET: NET contract 89-226, first intermediate report.** Verschuur, K.A.; Hogenbirk, A. Netherlands Energy Research Foundation (ECN), Petten (Netherlands). May 1991. 20p. Contract nr. 89-226;ECN Project nr. 1644. Order Number DE93603009. Source: OSTI; NTIS; INIS.

Principal: NET-Team (Next European Torus), Garching, Germany.

In the European Fusion Technology Programme there is only a small activity on research and development for fusion neutronics. Never-the-less, looking further than blanket design now, as ECN is getting involved in design of radiation shields for the coils and biological shields, it becomes apparent that fusion neutronics as a whole still needs substantial development. Existing exact codes for calculation of complex geometries like MCNP and DORT/TORT are put over the limits of their numerical capabilities, whilst approximate codes for complex geometries like FURNACE and MERCURE4 are put over the limits of their modelling capabilities. The main objective of this study is just to find out how far we can get with existing codes in obtaining reliable values for the radiation levels inside and outside the cryostat/shield during operation and after shut-down. Starting with a 1D torus model for preliminary parametric studies, more dimensional approximation of the torus or parts of it including the main heterogeneities should follow. Regular contacts with the NET-Team are kept, to be aware of main changes in NET design that might affect our calculation models. Work on the contract started 1 July 1990. The technical description of the contract is given. (author). 14 refs.; 4 figs.; 1 tab.

32450 (ECN-I–91-032) **Neutron metrology in the HFR: Steel irradiation R139-594/595/596.** Baard, J.H.; Voorbraak, W.P. Netherlands Energy Research Foundation (ECN), Petten (Netherlands). Jun 1991. 34p. Order Number DE93603013. Source: OSTI; NTIS; INIS.

The experiment R-139-59 for investigating the stainless steel type 316-CL has been irradiated in the HFR Petten. This report presents the metrology results obtained from activation monitors in specimen holders for the steel experiment R139-595/595/596. Data about helium production as well as the number of displacements per atom are also included. The irradiation conditions for this experiment, carried out in a TRIO type capsule in the HFR position H8, are as close as possible to conditions of the EFR (European Fast Reactor) above core structure. Main results of the thermal and fast neutron fluence measurements are presented in table 1 and in figures 1-3. (author). 13 refs.; 3 figs.; 12 tabs.

32451 (ECN-I–91-037) **Neutron metrology in the HFR: Steel irradiation R139-6551.** Appelman, K.H.; Voorbraak, W.P. Netherlands Energy Research Foundation (ECN), Petten (Netherlands). Jun 1991. 26p. Order Number DE93603015. Source: OSTI; NTIS; INIS.

In this report the metrology results are presented for the thermal and fast neutron measurements with activation monitors in experiment R139-6551, loaded in channel 2 of a TRIO capsule, irradiated in core position D2. The main results of the thermal and fast neutron fluence measurements are presented in table 1 and figures 1. (author). 10 refs.; 1 fig.; 10 tabs.

32452 (ECN-RX–91-067) **Fabrication, properties and tritium release rates of lithium zirconates: Paper presented at the 'Third International Symposium on the Fabrication and Properties of Lithium Ceramics' during the '93rd Annual Meeting of the American Ceramic Society', Cincinnati, Ohio, April 28-May 2, 1991.** Kwast, H. (Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands). Sectie H); Cordfunke, E.H.P.; Muis, R.P. Netherlands Energy Research Foundation (ECN), Petten (Netherlands). Aug 1991. 17p. (CONF-9104388–: 3. International Symposium on the Fabrication and Properties of Lithium Ceramics' during the '93. Annual Meeting of the American Ceramic Society', Cincinnati OH (United States), 28 Apr - 2 may 1991). Order Number DE93603021. Source: OSTI; NTIS; INIS.

The work described in this paper has been performed in the frame of the European Fusion Technology Programme, tasks B11-B16, with financial support of the Commission of the European Community.

Lithium zirconates are potential tritium breeding materials for fusion reactor blankets. Although Li_2ZrO_3 has been considered as the prime ceramic breeder material in the EXOTIC experiments 4 and 5, $Li_6Zr_2O_7$ and Li_8ZrO_6 have been irradiated also. The samples of $Li_6Zr_2O_7$ and Li_8ZrO_6 for EXOTIC-4 were all made by NRL-Springfields (UK), the $Li_6Zr_2O_7$ samples for EXOTIC-5 also, and those of Li_8ZrO_6 by ECN-Petten. Recently, ECN also made $Li_6Zr_2O_7$, to be irradiated in EXOTIC-6. In this paper the fabrication and properties of $Li_6Zr_2O_7$ and Li_8ZrO_6 will be discussed, and some of the material characteristics will be given, including tritium residence times obtained from temperature transients carried out during irradiation. (author). 16 refs.; 5 figs.; 2 tabs.

32453 (ECN-RX–91-102) **Short status report on EFF and EAF projects: Presented at the Topical Conference on Nuclear Data for Fusion Reactor Technology, NEANDC Meeting, Karlsruhe, October 22, 1991.** Gruppelaar, H. (Netherlands Energy Research Foundation (ECN), Petten (Netherlands)). Netherlands Energy Research Foundation (ECN), Petten (Netherlands). Oct 1991. 6p. (CONF-9110231–: Topical conference on nuclear data for fusion reactor technology, Karlsruhe (Germany), 23 Oct 1991). Order Number DE93603022. Source: OSTI; NTIS; INIS.

A short status report is given on the European Fusion File (EFF) and European Activation File (EAF) projects. The EFF-2 data file is nearly finished and processing and benchmarking is underway. There is also a second version (EAF-2) of the activation file which is a very extensive and complete data base. Recently follow-up programmes have been defined for the introduction of EFF-2 to the user community after benchmarking and for further improvement of the quality of the two data files. There is extensive international cooperation, which is becoming increasingly important to solve remaining difficult problems. (author). 17 refs.

32454 (ECN-RX–92-013) **Structural analyses of ITER toroidal field coils under fault conditions.** Jong, C.T.J. (Netherlands Energy Research Foundation (ECN), Petten (Netherlands)).

Netherlands Energy Research Foundation (ECN), Petten (Netherlands). Apr 1992. 25p. (CONF-9206272--: ANSYS Technology Conference and Exhibition, Pittsburgh PA (United States), 8-12 Jun 1992). Order Number DE93603006. Source: OSTI; NTIS; INIS.

This paper will be presented at the ANSYS Technology Conference and Exhibition, June 8-12, 1992, Pittsburgh, Pennsylvania, USA.

ITER (International Thermonuclear Experimental Reactor) is intended to be an experimental thermonuclear tokamak reactor testing the basic physics performance and technologies essential to future fusion reactors. The magnet system of ITER consists essentially of 4 sub-systems, i.e. toroidal field coils (TFCs), poloidal field coils (PFCs), power supplies, and cryogenic supplies. These subsystems do not contain significant radioactivity inventories, but the large energy inventory is a potential accident initiator. The aim of the structural analyses is to prevent accidents from propagating into vacuum vessel, tritium system and cooling system, which all contain significant amounts of radioactivity. As part of design process 3 conditions are defined for PF and TF coils, at which mechanical behaviour has to be analyzed in some detail, viz: normal operating conditions, upset conditions and fault conditions. This paper describes the work carried out by ECN to create a detailed finite element model of 16 TFCs as well as results of some fault condition analyses made with the model. Due to fault conditions, either electrical or mechanical, magnetic loading of TFCs becomes abnormal and further mechanical failure of parts of the overall structure might occur (e.g. failure of coil, gravitational supports, intercoil structure). The analyses performed consist of linear elastic stress analyses and electro-magneto-structural analyses (coupled field analyses). 8 refs.; 5 figs.; 5 tabs.

32455 (EGG-FSP-10262) **Investigation of component failure rates for pulsed versus steady state tokamak operation.** Cadwallader, L.C. EG and G Idaho, Inc., Idaho Falls, ID (United States). Jul 1992. 39p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC07-76ID01570. Order Number DE92019758. Source: OSTI; NTIS; INIS; GPO Dep.

This report presents component failure rate data sources applicable to magnetic fusion systems, and defines multiplicative factors to adjust these data for specific use on magnetic fusion experiment designs. The multipliers address both long pulse and steady state tokamak operation. Thermal fatigue and radiation damage are among the leading reasons for large multiplier values in pulsed operation applications. Field failure rate values for graphite protective tiles are presented, and beryllium tile failure rates in laboratory testing are also given. All of these data can be used for reliability studies, safety analyses, design tradeoff studies, and risk assessments.

32456 (EGG-FSP-10347) **Verification and validation of TMAP4.** Longhurst, G.R.; Harms, S.L.; Marwil, E.S.; Miller, B.G. EG and G Idaho, Inc., Idaho Falls, ID (United States). 8 Jul 1992. 94p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC07-76ID01570. Order Number DE92019684. Source: OSTI; NTIS; INIS; GPO Dep.

The Tritium Migration Analysis Program MOD/CY04 (TMAP4) was written to be used in analyzing experiments and for safety calculations that involve the injection, solution, diffusion, trapping, release, and other related processes experienced by hydrogen isotopes in materials. Because of the desire to make it suitable for analyzing safety issues, it is important that TMAP4 be certified (verified and validated) at Quality Assurance Level A. This report documents the work done to achieve that certification. The process includes assuring that the developed code meets the software requirements specified in the Software Quality Assurance Plan, verifying that the code functions in accordance with the written description and that it is self-consistent and internally correct, and validating that its computed results are in agreement with experimental data and/or known analytical solutions. Quality Level A certification for TMAP4 is specifically for implementation on an IBM PS/2 Model 70 operating under DOS 5.0. Certification for any other environment will require demonstration that all of the verification and validation tests documented here give the same results in the new environment.

32457 (EGG-M-91508) **A vacuum disengager for tritium removal from HYLIFE-II Reactor Flibe.** Dolan, T.J. (EG and G Idaho, Inc., Idaho Falls, ID (United States)); Longhurst, G.R.; Garcia-Otero, E. EG and G Idaho, Inc., Idaho Falls, ID (United States). [1992]. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC07-76ID01570. (CONF-920607-18: 10. topical meeting on technology of fusion energy, Boston, MA (United States), 7-12 Jun 1992). Order Number DE92017886. Source: OSTI; NTIS; INIS; GPO Dep.

We have designed a vacuum disengager system to remove tritium from the Flibe (Li_2BeF_4) molten salt coolant of the HYLIFE-II fusion reactor. There is a two-stage vacuum disengager in each of three intermediate heat exchanger (IHX) loops. Each stage consists of a vacuum chamber 4 m in diameter and 7 m tall. As 0.2 mm diameter molten salt droplets fall vertically downward into the vacuum, most of the tritium diffuses out of the droplets and is pumped away. A fraction $\Phi \sim 10^{-5}$ of the 8.6 MCi/day tritium source (from breeding in the Flibe and from unburned fuel) remains in the Flibe as it leaves the vacuum disengagers, and about 21% of that permeates into the intermediate coolant loop, so about 20 Ci/day leak into the steam system. With Flibe primary coolant and a vacuum disengager, it appears that an intermediate coolant loop is not needed to prevent tritium from leaking into the steam system. An experiment is needed to demonstrate Flibe vacuum disengager operation.

32458 (EUR-CEA-FC-1446) **Determination of the safety factor profile in Tore Supra from striations observed during pellet ablation.** Dubois, M.A.; Sabot, R.; Pegourie, B.; Drawin, H.W.; Geraud, A. Association Euratom-CEA, Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-lez-Durance (France). Dept. de Recherches sur la Fusion Controlee. Jan 1992. 17p. Source: OSTI; NTIS (US Sales Only); INIS.

Striations in H_α (D_α) light observed across the ablation cloud of injected hydrogen pellets can be explained in most cases by the presence of resonant magnetic surfaces. We show that it is possible to identify them and to obtain a very detailed profile of the safety factor. This q- profile shows shear plateaus related to rational q-values, thus suggesting the presence of magnetic turbulence.

32459 (GA-A-20914) **Future development of the DIII-D tokamak program.** Simonen, T.C. General Atomics, San Diego, CA (United States). Jul 1992. 14p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-89ER51114 ;W-7405-ENG-48 ;AC03-89ER52153 ;AC05-84OR21400. (CONF-9204146-4: Fusion Power Associates annual meeting and symposium, Pleasanton, CA (United States), 9 Apr 1992). Order Number DE92040051. Source: OSTI; NTIS; INIS; GPO Dep.

The DIII-D long range research program focuses on diverter and advanced tokamak issues. Our DIII-D goal is to provide an integrated demonstration of well-confined high-beta diverter plasma with non-inductive current drive. Our reference scenario is 5% beta with 2MA for 10s. Implementation of this plan will resolve many ITER R&D issues, validate many aspects of the ITER engineering design, possibly open new ITER operating options, and identify engineering design concepts for an attractive DEMO to follow the success of ITER. The DIII-D plan for implementation of new research tools is discussed in this paper. To implement this program will require additional research tools, in particular a radiative divertor configuration and higher power rf systems for non-inductive current profile control.

32460 (JAERI-M-92-041) **Japanese contribution of ITER PF systems design during CDA.** Azumi, Masafumi (Japan Atomic Energy Research Inst., Naka, Ibaraki (Japan). Naka Fusion Research Establishment); Hasegawa, Mitsuru; Kameari, Akihisa. Japan Atomic Energy Research Inst., Tokyo (Japan). Mar 1992. 108p. Order Number DE93703493. Source: OSTI; NTIS; INIS.

This report presents the brief summary of major part of Japanese contributions to the poloidal field coil systems design during conceptual design activity (CDA). The followings are studied; layout of poloidal field coil system, effects of plasma triangularity and current profile, alternative configurations such as semi-double null and single null divertor plasmas apart from the reference double null plasma, magnetic line tracing study for the detailed examination of the divertor plasmas, repulsive force on the center solenoid for the volt-second saving operation scenario, general criteria of vertical stability by passive structure, stability performance of two types of passive structure, saddle loop type and twin loop type, in-vessel coil current and voltage evaluation required for active control of plasma verrical position, TOLFEX method for the identification of plasma shape and position for the control of ITER plasma, control of horizontal plasma position during breakdown, slow control algorithm for the plasma shape, means to reduce the effective divertor peak heat load, separatrix sweeping both by SC coils and in-vessel coils, feasibility to generate the ergodic magnetic layer by in-vessel coils for the vertical position control, simulation of plasma dynamic behavior after the thermal quench by TSC code. Many of the results are not fully complete, while should be sufficient o demonstrate the feasibility of the CDA design. (J.P.N.).

32461 (JAERI-M--92-045) **Design of JAERI Gyrotron Test Facility.** Tsuneoka, Masaki (Japan Atomic Energy Research Inst., Naka, Ibaraki (Japan). Naka Fusion Research Establishment); Fujita, Hideo; Nagashima, Takashi. Japan Atomic Energy Research Inst., Tokyo (Japan). Mar 1992. 100p. (In Japanese). Order Number DE93703496. Source: OSTI; NTIS; INIS.

This report describes the design of a high power Radio Frequency Test Facility at JAERI, Naka. A high power Klystron Test Facility is modified into the high power Radio Frequency Test Facility that is also able to operate a high power gyrotron in the range of 100 GHz for Electron Cyclotron Resonance Heating (ECRH) system. (author).

32462 (JAERI-M--92-053) **Comparison of double-differential neutron emission cross sections calculated from evaluated nuclear data libraries with experimental data.** Fukahori, Tokio; Chiba, Satoshi; Asami, Tetsuo. Japan Atomic Energy Research Inst., Tokyo (Japan). ©Apr 1992. 212p. Sponsored by Japan Atomic Energy Research Inst., Tokyo (Japan). (INDC(JPN)--159/L). Order Number DE92015167. Source: OSTI; NTIS (US Sales Only).

The energy-angle double differential cross sections of emitted neutrons (DDXs) from neutron induced reactions are fundamental data for fusion neutronics calculation. The third version of Japanese Evaluated Nuclear Data Library (JENDL-3) was produced aiming at the applications related to the fission neutronics as well as fusion reactors. In order to check the reliability of the evaluated data, the DDX data for 32 elements from lithium to uranium calculated from JENDL-3 were compared with experimental data and values calculated from other two major evaluated nuclear data libraries, ENDF/B-VI and JEF-2. The comparison was made at the neutron incident energies of 4.2, 5.4, 6.0, 14.1 and 18.0 MeV, and at the angles of 30°, 60°, 90°, 120° and 150°. It was found that the DDX data calculated from JENDL-3 could reproduce overall trend of experimentally observed values. However, some discrepancies were also recognized.

32463 (JAERI-M--92-056) **Comparison between a steady-state fusion reactor and an inductively driven pulse reactor.** Murakami, Yoshiki (Japan Atomic Energy Research Inst., Naka, Ibaraki (Japan). Naka Fusion Research Establishment); Horiike, Hiroshi; Kuroda, Toshimasa; Matsuzaki, Yoshimi; Shimomura, Yasuo; Sugihara, Masayoshi. Japan Atomic Energy Research Inst., Tokyo (Japan). Apr 1992. 61p. Order Number DE93703545. Source: OSTI; NTIS; INIS.

Characteristics of an inductively driven pulse reactor are reviewed and compared with those of a steady-state reactor. Operation regions of both types of the reactor are studied for various toroidal fields. Sample parameters of the pulse reactor are presented and the pulse duration time is calculated for various cases on the basis of the ITER technology. The thermal instability of the pulse reactor is examined by using the reference energy confinement scaling laws for ITER. The pulse reactor could be a future fusion reactor if the plasma is stably maintained with no or very small additional heating power. Reactor size, however, is relatively large and the enormous additional equipments are required. In the steady-state reactor, the requirement in the confinement, βlimit and the divertor performance are relatively strict, while the reactor size is more compact and the controllability of the plasma is better than the pulse reactor. (J.P.N.).

32464 (LA-UR--92-2582) **Applications of group-invariant analytic solutions to inertial confinement fusion.** Coggeshall, S.V. Los Alamos National Lab., NM (United States). [1992]. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-920913--11: 14. international conference on plasma physics and controlled nuclear fusion research, Wuerzburg (Germany), 30 Sep - 7 oct 1992). Order Number DE92040347. Source: OSTI; NTIS; INIS; GPO Dep.

Analytic solutions to 1-,2-, and 3-D hydrodynamics are presented which can be applied to specific aspects of Inertial Confinement Fusion target evolutions. These solutions include drive source time profiles for 1-D isentropic implosions, 2-D P_2 asymmetric compressions, 1- and 2-D solutions for the stagnation phase of implosions, and a 3-D spinning (mixing) solution.

32465 (NIKHEF-H--92-04) **BRST field theory of relativistic particles.** Holten, J.W. van (Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands). Sectie H). Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands). Sectie H. 1992. 18p. Order Number DE93602998. Source: OSTI; NTIS; INIS.

Research supported by the Stichting F.O.M.

A generalization of BRST field theory is presented, based on wave operators for the fields constructed out of, but different from the BRST operator. The authors discuss their quantization, gauge fixing and the derivation of propagators. It is shown, that the generalized theories are relevant to relativistic particle theories in the Brink-Di Vecchia-Howe-Polyakov (BDHP) formulation, and argue that the same phenomenon holds in string theories. In particular it is shown, that the naive BRST formulation of the BDHP theory leads to trivial quantum field theories with vanishing correlation functions. (author). 22 refs.

32466 (PNL-SA--19945) **Isotopic tailoring with ^{59}Ni to study the effect of helium on microstructural evolution and mechanical properties of neutron-irradiated Fe-Cr-Ni alloys.** Garner, F.A. (Pacific Northwest Lab., Richland, WA (United States)); Hamilton, M.L.; Greenwood, L.R.; Stubbins, J.F.; Oliver, B.M. Pacific Northwest Lab., Richland, WA (United States). Mar 1992. 29p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-920673--10: 16. annual symposium of American Society of Testing and Materials (ASTM), Denver, CO (United States), 21-22 Jun 1992). Order Number DE92019372. Source: OSTI; NTIS; INIS; GPO Dep.

Tensile testing on three model Fe-Cr-Ni alloys removed from four discharges of the $_{59}$Ni isotopic doping experiment in FFTF-MOTA indicates that helium/dpa ratios typical of fusion reactors do not produce changes in the yield strength or elongation that are significantly different from those at much lower helium generation rates. It also appears that tensile properties approach a saturation level that is dependent only on the final irradiation temperature, but not prior temperature history or thermomechanical starting condition. The saturation in mechanical properties reflects a similar saturation in microstructure that is independent of starting condition. The successful conduct of an isotopic doping experiment was found to require post-irradiation measurement of the helium levels in order to compensate for uncertainties in the cross sections for burn-out and burn-in of $_{59}$Ni and for uncertainties in neutron flux and spectra in the vicinity of the edge of the core.

32467 (PNL-SA--19956) **The response of dispersion-strengthened copper alloys to high fluence neutron irradiation at 415°C.** Edwards, D.J. (Missouri Univ., Rolla, MO (United States)); Newkirk, J.W.; Garner, F.A.; Hamilton, M.L.; Nadkarny, A.; Samal, P. Pacific Northwest Lab., Richland, WA (United States). Jun 1992. 41p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-920673--9: 16. annual symposium of American Society of Testing and Materials (ASTM), Denver, CO (United States), 21-22 Jun 1992). Order Number DE92019434. Source: OSTI; NTIS; INIS; GPO Dep.

Various oxide-dispersion-strengthened copper alloys have been irradiated to 150 dpa at 415°C in the Fast Flux Test Facility (FFTF). The $Al_2 0_3$ - strengthened GlidCop™ alloys, followed closely by a HfO_2 - strengthened alloy, displayed the best swelling resistance, electrical conductivity, and tensile properties. The conductivity of the HfO_2 - strengthened alloy reached a plateau at the higher levels of irradiation, instead of exhibiting the steady decrease in conductivity observed in the other alloys. A high initial oxygen content resulted in significantly higher swelling for a series of castable oxide-dispersion-strengthened alloys, while a Cr_20_3 -strengthened alloy showed poor resistance to radiation.

32468 (PPPL-CFP-2621) **Magnetic fusion and project ITER.** Park, H.K. Princeton Univ., NJ (United States). Plasma Physics Lab. [1992]. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03073. (CONF-9207127-1: Summer symposium on science, Seoul (Korea, Republic of), 6-10 Jul 1992). Order Number DE92018447. Source: OSTI; NTIS; INIS; GPO Dep.

It has already been demonstrated that our economics and international relationship are impacted by an energy crisis. For the continuing prosperity of the human race, a new and viable energy source must be developed within the next century. It is evident that the cost will be high and will require a long term commitment to achieve this goal due to a high degree of technological and scientific knowledge. Energy from the controlled nuclear fusion is a safe, competitive, and environmentally attractive but has not yet been completely conquered. Magnetic fusion is one of the most difficult technological challenges. In modem magnetic fusion devices, temperatures that are significantly higher than the temperatures of the sun have been achieved routinely and the successful generation of tens of million watts as a result of scientific break-even is expected from the deuterium and tritium experiment within the next few years. For the practical future fusion reactor, we need to develop reactor relevant materials and technologies. The international project called "International Thermonuclear Experimental Reactor (ITER)" will fulfill this need and the success of this project will provide the most attractive long-term energy source for mankind.

32469 (SAND-91-0284) **Report on the joint meeting of the Division of Development and Technology Plasma Wall Interaction and High Heat Flux Materials and Components task groups.** Nygren, R.E. (ed.). Sandia National Labs., Albuquerque, NM (United States). Apr 1992. 434p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DP00789. (CONF-9009508-: Joint meeting of the Division of Development and Technology Plasma Wall Interaction and High Heat Flux Materials and Components task groups, Albuquerque, NM (United States), 12-14 Sep 1990). Order Number DE92019097. Source: OSTI; NTIS; INIS; GPO Dep.

The Plasma/Wall Interaction and High Heat Flux Materials and Components Task Groups typically hold a joint meeting each year to provide a forum for discussion of technical issues of current interest as well as an opportunity for program reviews by the Department of Energy (DOE). At the meeting in September 1990, reported here, research programs in support of the International Thermonuclear Experimental Reactor (ITER) were highlighted. The first part of the meeting was devoted to research and development (R&D) for ITER on plasma facing components plus introductory presentations on some current projects and design studies. The balance of the meeting was devoted to program reviews, which included presentations by most of the participants in the Small Business Innovative Research (SBIR) Programs with activities related to plasma wall interactions. The Task Groups on Plasma/Wall Interaction and on High Heat Flux Materials and Components were chartered as continuing working groups by the Division of Development and Technology in DOE's Magnetic Fusion Program. This report is an addition to the series of "blue cover" reports on the Joint Meetings of the Plasma/Wall Interaction and High Heat Flux Materials and Components Task Groups. Among several preceding meetings were those in October 1989 and January 1988.

32470 (SAND-92-0370C) **Low energy helium implantation in evaporated nickel surfaces.** Nygren, R.E. (Sandia National Labs., Albuquerque, NM (United States)); Doyle, B.L.; Walsh, D.S.; Ottenberger, W.; Brooks, J.N.; Krauss, A. Sandia National Labs., Albuquerque, NM (United States). [1992]. 16p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DP00789. (CONF-920311-23: 10. international conference on plasma-surface interactions in controlled fusion devices, Monterey, CA (United States), 30 Mar - 3 apr 1992). Order Number DE92019297. Source: OSTI; NTIS; INIS; GPO Dep.

This paper reports data on helium (He) implantation at low energy (100–200eV) in nickel (Ni) that support a concept for He self-pumping in tokamaks, and specifically an experiment in TEXTOR. These data indicate trapping saturates at about 4×10^{19} He/m^2 areal density for He implanted at 100 eV He in Ni at 500°C. Neither prior implantation of deuterium (D) nor D bombardment of Ni surfaces already containing implanted He significantly changed the He saturation value. A model for trapping capacity and these data were used to predict He self pumping in TEXTOR.

32471 (UCID-21816) **HYLIFE-2 progress report.** Moir, R.W. (Lawrence Livermore National Lab., CA (United States)); Adamson, M.G.; Bangerter, R.O.; Bieri, R.L.; Condit, R.H.; Hartman, C.W.; House, P.A.; Langdon, A.B.; Logan, B.G.; Orth, C.D.; Petzoldt, R.W.; Pitts, J.H.; Post, R.F.; Sacks, R.A.; Tobin, MLawrence Livermore National Lab., CA (United States). Dec 1991. 283p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE92040947. Source: OSTI; NTIS; INIS; GPO Dep.

LIFE-II inertial confinement fusion power plant design study uses a liquid fall, in the form of jets to protect the first structural wall from neutron damage, x rays, and blast to provide a 30-y lifetime. This is a progress report of an incomplete and ongoing study. HYLIFE-I used liquid lithium. HYLIFE-11 avoids the fire hazard of lithium by using a molten salt composed of fluorine, lithium, and beryllium (Li_2Be_4) called Flibe. Access for heavy-ion beams is provided. Calculations for assumed heavy-ion beam performance show a nominal gain of 70 at 5 MJ producing 350 MJ, about 5.2 times less yield than the 1.8 GJ from a driver energy of 4.5 MJ with gain of 400 for HYLIFE-I. The nominal 1 GWe of power can be maintained by increasing the repetition rate by a factor of about 5.2, from 1.5 to 8 Hz. A higher repetition rate requires faster reestablishment of the jets after a shot, which can be accomplished in part by decreasing the jet fall height and increasing the jet flow velocity. Multiple chambers may be required.In addition, although not considered for HYLIFE-I there is undoubtedly liquid splash that must be forcibly cleared because gravity is too slow, especially at high repetition rates. Splash removal can be accomplished by either pulsed or oscillating jet flows. The cost of electricity is estimated to be 0.10 \$/kW· in constant 1990 dollars, about twice that of future coal and light water reactor nuclear power. The driver beam cost is about one-half the total cost.

32472 (UCRL-ID-107986) **Inertial confinement fusion driver enhancements: Final focusing systems and compact heavy-ion driver designs.** Bieri, R.L. Lawrence Livermore National Lab., CA (United States). 17 Jul 1991. 169p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE92019906. Source: OSTI; NTIS; INIS; GPO Dep.

Required elements of an inertial confinement fusion power plant are modeled and discussed. A detailed analysis of two critical elements of candidate drivers is done, and new component designs are proposed to increase the credibility and feasibility of each driver system. An analysis of neutron damage to the final elements of a laser focusing system is presented, and multilayer – dielectric mirrors are shown to have damage lifetimes which axe too short to be useful in a commercial power plant. A new final-focusing system using grazing incidence metal mirrors to protect sensitive laser optics is designed and shown to be effective in extending the lifetime of the final focusing system. The reflectivities and damage limits of grazing incidence metal mirrors are examined in detail, and the required mirror sizes are shown to be compatible with the beam sizes and illumination geometries currently envisioned for laser drivers. A detailed design and analysis is also done for compact arrays of superconducting magnetic quadrupoles, which are needed in a multi-beam heavy-ion driver. The new array model is developed in more detail than some previous conceptual designs and models arrays which are more compact than arrays scaled from existing single – quadrupole designs. The improved integrated model for compact arrays is used to compare the effects of various quadrupole array design choices on the size and cost of a heavy-ion driver. Array design choices which significantly affect the cost of a heavy-ion driver include the choice of superconducting material and the thickness of the collar used to support the winding stresses. The effect of these array design choices on driver size and cost is examined and the array model is used to estimate driver cost savings and performance improvements attainable with aggressive quadrupole array designs with high-performance superconductors.

32473 (UCRL-JC–103286) **LANSA: A large neutron scintillator array for neutron spectroscopy at Nova.** Nelson, M.B.; Cable, M.D.; Bennett, C.K.; Mant, G. Lawrence Livermore National Lab., CA (United States). 11 May 1992. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-920362–41: 9. topical conference on high-temperature plasma diagnostics, Santa Fe, NM (United States), 15-19 Mar 1992). Order Number DE92019539. Source: OSTI; NTIS; INIS; GPO Dep.

A very sensitive neutron time-of-flight spectrometer is now in use at Nova. LANSA consists of 960 channels of a neutron sensitive liquid scintillator (10 x IO x IO cm) coupled to a photomultiplier tube followed by a discriminator, TDC and ADC to allow the measurement of neutron arrival time as well as pulse size. LANSA is capable of measuring yields as low as 2.3 x 10^5 DT neutrons (100 detected hits) with resolution of 2.3 ns (170 key for 14 MeV neutrons with 20 m flight path). Shielding and collimation provide background levels low enough to allow measurement of secondary and tertiary reaction neutrons. Details of design, testing, calibration and experimental results will be presented. This work was performed under the auspices of the US Department of Energy by Lawrence Livermore National Laboratory under contract No. W-7405-ENG-48.

32474 (UCRL-JC–108860) **A design for an advanced divertor for DIII-D and ITER: The radiative slot divertor.** Allen, S.L. (Lawrence Livermore National Lab., CA (United States)); Rensink, M.E.; Hill, D.N.; Wood, R.; Nilson, D.; Logan, B.G.; Stambaugh, R.; Petrie, T.W.; Staebler, G.M.; Mahdavi, M.A.; Hulse, R.; Campbell, R.B. Lawrence Livermore National Lab., CA (United States). Mar 1992. 19p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48 ;AC03-89ER51114 ;AC04-76DP00789. (CONF-920311–24: 10. international conference on plasma-surface interactions in controlled fusion devices, Monterey, CA (United States), 30 Mar - 3 apr 1992). Order Number DE92019579. Source: OSTI; NTIS; INIS; GPO Dep.

Reduction of the divertor heat load is an important issue for future tokamaks, particularly during the technology phase of ITER. We discuss a conceptual design for one type of advanced divertor: the radiative slot divertor. The goal of this divertor configuration is to enhance the radiation in the divertor region and thereby reduce the heat load at the strike points. At the same time, any effects on the core plasma must be minimized. Proof-of-principle experiments to enhance the radiation in the DIII-D divertor have been performed both with deuterium and impurity injection. We compare several computer models with results from these experiments to predict performance and thereby guide designs of radiative divertors for future machines. We have estimated impurity radiation using calculations of the background plasma with the 2-dimensional code B2 coupled with non-coronal models of impurity radiation. The DEGAS code has been used to estimate hydrogenic transport, charge exchange, and radiation losses. Estimates of impurity transport are provided by 1-1/2 dimensional models and calculations of impurity frictional-force terms. These model results are in qualitative agreement with the ~1MW reduction of measured divertor power in DIII-D during divertor impurity puffing experiments. Specific designs, including engineering details, for applications to DIII-D and ITER will be discussed.

32475 (UCRL-JC–108861) **DIII-D edge physics database.** Jong, R.A. (Lawrence Livermore National Lab., CA (United States)); Porter, G.D.; Hill, D.N.; Buchenauer, D.A.; Bramson, G. Lawrence Livermore National Lab., CA (United States). Mar 1992. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48 ;AC04-76DP00789 ;AC03-89ER51114. (CONF-920311–25: 10. international conference on plasma-surface interactions in controlled fusion devices, Monterey, CA (United States), 30 Mar - 3 apr 1992). Order Number DE92019577. Source: OSTI; NTIS; INIS; GPO Dep.

We have developed an edge-physics database containing data for the plasma in the divertor region and the scrape-off layer (SOL) for the DIII-D tokamak. The database provides many of the parameters necessary to model the power flow to the divertor and other plasma processes in the plasma edge. It will also facilitate the analysis of DIII-D data for comparison with other divertor tokamaks. In addition to the core plasma parameters, edge-specific data are included in this database. Initial results using the database show good agreement between the pressure profiles measured by the Langmuir probes and those determined from the Thomson data for the inner strike point, but not for the outer strike point region. We also find that the ratio of separatrix density to average core density, as well as the in/out asymmetry in the SOL power at the divertor in DIII-D do not agree with values currently assumed in modeling the International Thermonuclear Experimental Reactor (ITER).

32476 (UCRL-JC–109256) **Preparation, optical and laser properties of Nd-doped sol-gel silica.** Thomas, I.M.; Payne, S.A.; Wilke, G.D. Lawrence Livermore National Lab., CA (United States). 1 Jul 1992. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-920792–25: SPIE international symposium on optical applied science and engineering, San Diego, CA (United States), 19-24 Jul 1992). Order Number DE92019378. Source: OSTI; NTIS; GPO Dep.

A novel sol-gel process has been used to prepare homogeneous, fully dense, cylindrical samples of neodymium-doped silica and neodymium- aluminum-doped silica. The absorption and emission spectra, fluorescent lifetimes and quantum yields of all samples were measured. The quantum yields of Nd_2O_3-SiO_2 samples wee very low due to clustering of the Nd in the silica matrix. The incorporation of alumina eliminated the clustering and quantum yields up to 55% were obtained. We showed that these quantum yields of less than unity were caused by residual OH quenching of the Nd fluorescence. The fluorescent properties were unchanged when the OH was replaced with OD. One sample was demonstrated to lase under laser pumping.

32477 (UCRL-JC–109555) **High bandwidth second-harmonic generation in partially deuterated KDP.** Webb, M.S.; Eimerl, D.; Velsko, S.P. Lawrence Livermore National Lab., CA (United States). 30 Jan 1992. 18p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-920124–26: Society of Photo-Optical Instrumentation Engineers' international symposium on laser spectroscopy as part of SPIE's symposium on optics, electro-optics and laser applications in science and engineering, Los Angeles, CA (United States), 1 Order Number DE92019505. Source: OSTI; NTIS; INIS; GPO Dep.

We have experimentally determined the spectrally noncritical phasematching behavior of Type I frequency doubling in KDP and its dependence on deuteration level in partially deuterated KDP. The first order wavelength sensitivity parameter$\delta \Delta k / \delta \gamma$ for Type I doubling of 1.053 μm light vanishes for a KD*P crystal with a deuteration level between 10 and 14%. Very high bandwidth frequency doubling of Nd:glass lasers is possible with such a crystal.

32478 (UCRL-JC–110036) **Recent Nova experimental results.** Kilkenny, J.D.; Baldis, H.A.; Batha, S.H.; Cable, M.D.; Campbell, E.M.; Cook, R.C.; Darrow, C.B.; Dittrich, T.; Ellis, R.J.; Glendinning, S.G.; Haan, S.W.; Hammel, B.A.; Hatchett, S.P.; Kania, D.R.; Kauffman, R.L.; Kornblum, H.N.; Landen, O.L.; Lane, S.M.;Lawrence Livermore National Lab., CA (United States). 16 Mar 1992. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-920607–19: 10. topical meeting on technology of fusion energy, Boston, MA (United States), 7-12 Jun 1992). Order Number DE92019783. Source: OSTI; NTIS; INIS; GPO Dep.

The Inertial Confinement Fusion (ICF) Program and the Lawrence Livermore National Laboratory has made substantial progress in understanding the details of the radiation drive and the dynamics of capsules imploded by the Nova laser. A detailed understanding, validated by Nova experiments of the crucial physics for implosions is necessary before a new facility is started. A National Academy of Science Review Committee on ICF has recently endorsed a 12 point technical contract for the Nova program. Recent experiments have achieved a substantial number of these goals. A decrease in the level of plasma instabilities has been demonstrated by the use of phase plates. Neutron measurements have been used to demonstrate high densities in well understood implosions. A detailed understanding of the Rayleigh-Taylor instability at the ablation front of x-ray driven planar foil targets with large hydrodynamic growth factors has been proven. X-ray spectroscopy has been used to demonstrate a high fuel density and an improvement in the compression ratio of targets when a shaped pulse is used to keep a pusher on a low rho-r trajectory.

32479 (UCRL-JC-110478) **Stimulated Brillouin processes in crystals and glasses: Final report, September 17, 1986–October 31, 1991.** Faris, G.W. (SRI International, Menlo Park, CA (United States). Molecular Physics Lab.); Hickman, A.P. Lawrence Livermore National Lab., CA (United States); SRI International, Menlo Park, CA (United States). Feb 1992. 25p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE92019549. Source: OSTI; NTIS; INIS; GPO Dep.

The basic physics and material properties needed to describe and predict the Brillouin gain for a variety of materials have been investigated. Lawrence Livermore National Laboratory (LLNL) has identified transverse stimulated Brillouin scattering (SBS) as an important limiting mechanism in high power laser fusion systems. At sufficiently high laser intensities, SBS drives acoustic vibrations that can damage optical components. SRI has performed measurements and developed the corresponding theory for stimulated Brillouin gain spectroscopy in anisotropic crystals. Absolute Brillouin steady-state gain coefficients, linewidths, and frequency shifts have been determined at 532 nm for a number of optical materials of interest to LLNL. This knowledge can be used to select optical materials and devise suppression schemes that will allow much higher laser fluences to be used in laser fusion.

99 GENERAL AND MISCELLANEOUS

32480 (DOE/ER-0558T) **Advanced energy projects FY 1992 research summaries.** USDOE Office of Energy Research, Washington, DC (United States). Advanced Energy Projects Div. Sep 1992. 61p. Sponsored by USDOE, Washington, DC (United States). Order Number DE92040442. Source: OSTI; NTIS; INIS; GPO Dep.

The Division of Advanced Energy Projects (AEP) provides support to explore the feasibility of novel, energy-related concepts that evolve from advances in basic research. These concepts are typically at an early stage of scientific definition and, therefore, are beyond the scope of ongoing applied research or technology development programs. The Division provides a mechanism for converting basic research findings to applications that eventually could impact the Nation's energy economy. Technical topics include physical, chemical, materials, engineering, and biotechnologies. Projects can involve interdisciplinary approaches to solve energy-related problems. Projects are supported for a finite period of time, which is typically three years. Annual funding levels for projects are usually about $300,000 but can vary from approximately $50,000 to $500,000. It is expected that, following AEP support, each concept will be sufficiently developed and promising to attract further funding from other sources in order to realize its full potential. There were 39 research projects in the Division of Advanced Energy Projects during Fiscal Year 1992 (October 1, 1991 – September 30, 1992). The abstracts of those projects are provided to introduce the overall program in Advanced Energy Projects. Further information on a specific project may be obtained by contacting the principal investigator, who is listed below the project title. Projects completed during FY 1992 are indicated.

32481 (DOE/ER/75603-1) **The Teachers Academy for Mathematics and Science: Executive summary and program activities update.** Teachers Academy for Mathematics and Science, Chicago, IL (United States). [1992]. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-90ER75603. Order Number DE92019141. Source: OSTI; NTIS; GPO Dep.

In his State of the Union address on January 31, 1990, President Bush set a goal for US students to be number one in the world in mathematics and science achievement by the year 2000. The Teachers Academy for Mathematics and Science in Chicago is an experiment of unprecedented boldness and scale that can provide a means to the President's goal, both for the Chicago area and as a national model. This document covers organization and governance, program activities, future training goals, and evaluation programs.

32482 (DOE/ER/75657-1) **Progress performance report of clean uses of fossil fuels.** Kentucky Univ., Lexington, KY (United States). Research Foundation. [1992]. 74p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-91ER75657. Order Number DE92019456. Source: OSTI; NTIS; GPO Dep.

A one-year USDOE/EPSCOR Traineeship Grant, entitled "Clean Uses of Fossil Fuels." was awarded to the Kentucky EPSCoR Committee in September 1991 and administered through the the DOE/EPSCoR Subcommittee. Ten Traineeships were awarded to doctoral students who are enrolled or accepted into Graduate Programs at either the University of Kentucky or the University of Louisville. The disciplines of these students include Biology, Chemical Engineering, Chemistry, Geological Sciences, and Physics. The methods used for a statewide proposal solicitation and to award the Traineeships are presented. The review panel and Kentucky DOE/EPSCoR Subcommittee involved in awarding the Traineeships are described. A summary of the proposed research to be performed within these awards is presented, along with a description of the qualifications of the faculty and students who proposed projects. Future efforts to increase participation in Traineeship proposals for the succeeding funding period are outlined.

32483 (KFK-5046) **KfK Laboratory for Isotope Technology. Progress report on research and development activities in 1991.** Kernforschungszentrum Karlsruhe GmbH (Germany). Lab. fuer Isotopentechnik. Mar 1992. 15p. (In German). Order Number DE93702252. Source: OSTI; NTIS (US Sales Only); INIS.

The R and D work done by the Laboratory for Isotope Technology (LIT) in 1991 under the project of pollutant control in the environment, concentrated on thermal waste treatment processes, avove all on the classical refuse incineration, for which closed-circuit pollutant balances were established, and process engineering studies were made aimed at reducing pollutants in waste gas. The central research facility of the LIT is the semi-technical pilot plant TAMARA (test plant for refuse incineration, waste gas purification, residue recycling, waste water treatment) with a throughout of 200 kg/hour of refuse. It was put into operation in 1986. The annex lists the publications by the LIT staff. (orig.).

32484 (LA-UR-92-2158) **The challenge of performance-based MC&A training for R&D facilities.** Lopez, R.L.; Price, R.L. Los Alamos National Lab., NM (United States). [1992]. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9207102-24: Institute of Nuclear Materials Management (INMM) annual meeting, Orlando, FL (United States), 19-22 Jul 1992). Order Number DE92018896. Source: OSTI; NTIS; INIS; GPO Dep.

The US Department of Energy (DOE) is requiring its contractors to conduct business in accordance with "Formality of Operations". Formality of operations has been extended into areas previously exempt; specifically, training. Formal training, qualification and certification standards have existed for many years within the military and commercial nuclear industry, but are relatively new to DOE contractors. These standards are especially challenging to national laboratories engaged in research and development (R&D). Formal training programs within this R&D environment present significant challenges due to the mission, culture, and employee profiles of these institutions. This paper addresses the design, development and implementation of a formal Los Alamos National Laboratory (LANL) Nuclear Materials Control & Accountability (MC&A) Training Program in response to draft DOE Order 5630.XX. "Safeguards and Security Training Program". Major issues covered include: (1) Performance-based training in the research community, (2) implementation challenges of DOE 5630.XX, (3) a working model using a graded approach, and (4) lessons teamed. The LANL MC&A Training Program is a performance-based training program modified to fit the R&D mission of the Laboratory.

32485 (SAND-91-2391C) **The problem with security: Public perception versus reality.** Caskey, D.L. Sandia National Labs., Albuquerque, NM (United States). [1991]. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DP00789. (CONF-9210111-6: International Carnahan conference on security technology, Atlanta, GA (United States), 14-16 Oct 1992). Order Number DE92019455. Source: OSTI; NTIS; GPO Dep.

The public perception of "security", both of the requirements and the implementation, is often at odds with the judgment of security professionals. There is clearly a need to bridge the existing gulf, both by better education of the public, and by the security community gaining a better understanding of public policy, its constraints and limitations, and the effects of public perception. This paper explores the topic through the examination of a case study. The example chosen was the recent Gulf War's effects on airport security in the US. The paper provides an analysis of the threat, as perceived by the FAA and the airports, the security measures imposed by the FAA, and their effects, on both public perception and in fact, from a technical security view. It also suggests that the lack of vulnerability analysis is a major problem in providing effective security.

32486 (DOE/AD-0029) **DOE Real Property: A yearly statistical handbook: Fiscal year 1992.** USDOE Assistant Secretary for Management and Administration, Washington, DC (United States). Office of Project and Facilities Management. [1992]. 87p. Sponsored by USDOE, Washington, DC (United States). Order Number DE92019907. Source: OSTI; NTIS; GPO Dep.

This handbook is prepared a a service to Department officials and others who have a need to reference real property data as part of their day-to-day functions. Information is arranged from broad Department levels through more narrow site level tables. Sections are arranged first by land holdings, followed by buildings, and lastly, by other structures and facilities. Other structures and facilities are real property components such as exterior utilities, roads, parking lots, exterior lighting, storage tanks, railroads tracks, and other similar items. The information is limited to real and related personal property holdings. Data on equipment holdings is available from other Department sources.

32487 (DOE/AD-0033P) **Work for others at the US Department of Energy: Summary report.** USDOE Office of Administration and Human Resource Management, Washington, DC (United States). Aug 1992. 44p. Sponsored by USDOE, Washington, DC (United States). Order Number DE92040441. Source: OSTI; NTIS; GPO Dep.

The Department of Energy (DOE) Work for Others (WFO) Program has been a successful means of providing highly specialized scientific and technical services and products to non-DOE entities. Through its Management and Operating (M&O) contractors, DOE provides opportunities for solving critical and challenging advanced research and technology problems to other Federal agencies, State and local governments and private industry, which otherwise would be unattainable in the private sector. DOE also benefits by enhancing its technological base and capabilities and providing for the possibility of applying advances to DOE work. These activities result in increasing research and development interactions between DOE facilities and industry to facilitate transfer of technology for further development or commercialization. The WFO Annual Report provides a characterization of this work using selected examples of projects, financial information and identification of DOE management improvement efforts undertaken to strengthen management and oversight of WFO.

32488 (DOE/EH-0254) **Line Program Environmental Management Audit: Formerly Utilized Sites Remedial Action Program.** USDOE Assistant Secretary for Environment, Safety, and Health, Washington, DC (United States). Office of Environmental Audit. May 1992. 178p. Sponsored by USDOE, Washington, DC (United States). Order Number DE92019100. Source: OSTI; NTIS; INIS; GPO Dep.

This report documents the results of the Line Program Environmental Management Audit completed for the Formerly Utilized Sites Remedial Action Program (FUSRAP). During this Audit, activities and records were reviewed and personnel interviewed at Oak Ridge, Tennessee. Additionally, since FUSRAP falls under the responsibility of the Office of the Assistant Secretary for Environmental Restoration and Waste Management, selected individuals from this office were interviewed in Washington, DC and Germantown, Maryland. The onsite portion of the FUSRAP Audit was conducted from March 16 through 27, 1992, by the US Department of Energy's Office of Environmental Audit (EH-24) located within the Office of the Assistant Secretary for Environment, Safety and Health (EH-1). The scope of the FUSRAP Line Program Environmental Management Audit was comprehensive and included all areas of environmental management with the exception of the National Environmental Policy Act (NEPA). Since the subject of compliance with and implementation of the requirements of NEPA is the responsibility of the DOE Headquarters Office of NEPA Oversight, management issues pertaining to NEPA were not investigated as part of this Audit.

32489 (DOE/PR-0023) **DOE Personal Property Management Factbook, Fiscal Year 1991.** USDOE Office of Procurement, Assistance and Program Management, Washington, DC (United States). [1991]. 71p. Sponsored by USDOE, Washington, DC (United States). Order Number DE92019101. Source: OSTI; NTIS; GPO Dep.

Contains many tables and charts.

The 1991 edition of the Personal Property Management Factbook reflects the Property and Equipment Management Division's (PR-162) efforts in providing accurate data and oversight concerning the Department of Energy's (DOE) personal property assets. Currently DOE holds approximately $11.7 billion in personal property which is located at Management and Operating contractors' installations, Offsite contractors' facilities, and DOE field activities throughout the country. The data presented within this text has been compiled from annual and semiannual personal property reports submitted through the Financial Information System and from the above mentioned organizations. The areas covered are: Surplus Property Transactions including Reutilization, Donation and Sale; Equipment Held For Future Projects; Stores Management; Motor Vehicle Management; and Aircraft Management. This Factbook is intended as a source of information concerning the scope of DOE's personal property activities and property management trends across the Department.

32490 (EGG-M-92340) **OJT...make 'em or break 'em.** Arner, S.A. EG and G Idaho, Inc., Idaho Falls, ID (United States). [1992]. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC07-76ID01570. (CONF-9205237-1: 1992 Mid-Atlantic nuclear training managers instructor workshop, Harrisburg, PA (United States), 4-6 May 1992). Order Number DE92017852. Source: OSTI; NTIS; GPO Dep.

On-the-job training (OJT) has been with us in varying forms for longer than perhaps any other type of training. In reality, OJT is a process for accomplishing change; change in an employee's ability to perform assigned job duties. However, bringing about that change can often be a difficult process. A clear understanding of what change really is and what it entails is essential to easing its process. this document discusses the methodology in OJT and emphasizes the importance of communications in this process.

32491 (INIS-mf-14060) **Program budget 1992 of the Karlsruhe Nuclear Research Center. As of November 19, 1991.** Kernforschungszentrum Karlsruhe GmbH (Germany). 1992 28p. (In German). Order Number DE93702170. Source: OSTI; NTIS (US Sales Only); INIS.

In the future, the research program of the Nuclear Research Center in Karlsruhe will concentrate on three areas, which are of the same status over the medium term: Environmental research, energy research and micro system technology and fundamental research. The central infrastructure, the financial planning and the assignment of research and development projects of the Nuclear Research Center are presented in tables. (orig./HP).

32492 (KEK-PR–91-2) **Photon Factory activity report, 1991.** National Lab. for High Energy Physics, Tsukuba, Ibaraki (Japan). 1992. 522p. Order Number DE93704262. Source: OSTI; NTIS; INIS.

The Photon Factory is a national synchrotron radiation research facility affiliated with the National Laboratory for High Energy Physics located in Tsukuba Science City. The Photon Factory consists of a 2.5 GeV electron/positron linear accelerator, a 2.5 GeV electron/positron storage ring, beam lines and experimental stations. All the facilities for synchrotron radiation research are open to scientists. A part of the accumulation ring of the TRISTAN main ring has been used as a synchrotron radiation source in the energy range from 5.8 to 6.5 GeV. The Photon Factory is composed of three divisions of Injector Linac, Light Source and Instrumentation. The researches of each divisions are reviewed, and the users' short reports are collected. The list of published papers with author index is also included in the publication. (K.I.) 233 refs.

32493 (NEI-NO–250) **Institutt for Energiteknikk - Annual report 1991.** Institutt for Energiteknikk, Kjeller (Norway). 1992 26p. Order Number DE93602472. Source: OSTI; NTIS; INIS.

Work at Institutt for Energiteknikk (IFE) comprises both nuclear and non-nuclear activities. The Halden Reactor Project focuses on two main areas: fuel- and materials technology based on experimental work using the Halden reactor; and information technology with emphasis on the development of computer-based systems for controlling and surveilling complex energy plants and industrial processes. The Halden Project represents a collaboration between national safety organizations, national research institutes, power companies and supply industries in 13 OECD countries. Participation by such Eastern European countries as Czechoslovakia is being discussed in concrete terms. At Kjeller irradiation services are based on the JEEP II reactor and the gamma irradiation facility. Neutron irradiation in the reactor produces the radioactive raw materials for the manufacture of radiopharmaceuticals and radiochemicals. Neutron irradiation is also used for the accurate control of conductivity in superpure silicon crystals. The main purpose of IFE's basic research in physics is to utilize neutron beams from the JEEP II reactor for fundamental studies of the physical characteristics of solids and complex liquids. 16 figs.

32494 (NEI-SE–95) **What role can nuclear power play in mitigating global warming?.** Pasztor, J. (Stockholm Environment Institute, Boston Center (United States)). Stockholm Environment Inst. (Sweden). Dec 1989. 32p. Order Number DE92644662. Source: OSTI; NTIS; INIS.

The purpose of this paper is to look at nuclear fission, as one of the available options, and evaluate qualitatively the extent to which it can play a role in greenhouse gas reduction strategies during the next three decades. No attempt will be made here to make a quantitative comparison with alternative energy supplies, or with energy efficiency measures.

32495 (NIRS-AR–34) **Annual report of National Institute of Radiological Sciences of the fiscal year 1990.** National Inst. of Radiological Sciences, Chiba (Japan). Jan 1992. 266p. (In Japanese). Order Number DE93704237. Source: OSTI; NTIS; INIS.

This annual report presents the activities of the National Institute of Radiological Sciences in Japan in the fiscal year 1990. The activities are divided into research, technical aids, training, medical services, management affairs at the Nakaminato Laboratory Branch Office, library or editing, international cooperation, and general affairs. Research activities are described under the following sections: (1) special researches covering 'biological risk evaluation in public exposure' and 'exposure assessment in the environment and the public involved in food chain', 'medical use of accelerated heavy ions', and 'survey for the demonstration of dose-response relationships in low dose irradiation'; (2) five assigned researches; (3) ordinary researches concerning physics, pharmacochemistry, biology, genetics, pathology and physiology, cell biology, internal exposure, envionmental science, clinical research, clinical research for radiation injuries, medical use of heavy particles, environmental radiation ecology, and aquatic radiation ecology; (4) risk estimation of radiation; (5) survey for radiation response phenomena in fish and in immunity associated with low dose irradiation; (6) actual surveys for Bikini victims, population doses of medical and occupational exposure, and thorotrast exposure; (7) project research; (8) integrated atomic energy-based technological research; (9) radioactivity survey; (10) research supported by Science and Technology Agency aids; (11) International research cooperation; (12) government-private joint cooperative study. Appendices include the personnel list and the bibliography of articles reported by the staff. (N.K.) 870 refs.

32496 (OUP–92-09) **Section for nuclear physics and energy physics - Annual Report: January 1 - December 31, 1991.** Oslo Univ. (Norway). Fysisk Inst. Apr 1992. 102p. Order Number DE92644663. Source: OSTI; NTIS; INIS.

This annual report summarizes the research and development activities of the Section for Nuclear Physics and Energy Physics at the University of Oslo in 1991. It includes experimental and theoretical nuclear physics, as well as other fields of physics in which members of the section have participated. The report describes completed projects and work currently in progress. As in previous years, the experimental activities in nuclear physics have mainly been centered around the Cyclotron Laboratory with the SCANDITRONIX MC-35 Cyclotron. Using the CACTUS multidetector system, several experiments have been completed. Some results have been published while more data remains to be analyzed.

32497 (PNL-SA–20410) **Integrated risk management for business survival.** Piatt, J.A. Pacific Northwest Lab., Richland, WA (United States). Jun 1992. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-9206181–4: Risk Management conference, Boston, MA (United States), 7-11 Jun 1992). Order Number DE92019433. Source: OSTI; NTIS; INIS; GPO Dep.

During the recent recession, many businesses have had to take severe measures to cut costs. The Department of Defense has also been faced with the need to cut costs to offset the expense of the Gulf War and a shrinking budget due to the fall of communism around the world. With the collapse of the Warsaw Pact and dissolution of the Soviet Union, there has been an increasing demand to reduce the defense budget to provide the so-called "peace dividend" to deal with social and economic problems at home. President Bush's State of the Union Message in February 1992 called for deeper cuts than the 25% previously anticipated. It also called for these cuts to occur sooner than expected with $50 billion in defense cuts anticipated over the fiscal 1992–1997 period. The Department of Defense plan for force resizing calls for 25-30% reductions over time. This report discusses how the department of defense is trying to deal with the management of this crisis.

32498 (RISO-R–607) **Materials Department. Annual report 1991.** Horsewell, A.; Hansen, N. (eds.). Risoe National Lab., Roskilde (Denmark). Materials Dept. Mar 1992. 64p. Order Number DE92644664. Source: OSTI; NTIS; INIS.

Selected activities of the Materials Department at Risoe National Laboratory during 1991 are described. The work is presented in three chapters: Materials Science, Materials Engineering and Materials Technology. A survey is given of the Department's participation in international collaboration and of its activities within education and training. Furthermore, the main figures outlining the funding and expenditure of the Department are given. Lists of staff members, visiting scientists, publications, lectures and poster presentations are included. (au).

32499 (RISO-R–611) **Optics and Fluid Dynamics Department. Annual progress report 1 January - 31 December 1991.** Juul Rasmussen, J.; Hanson, S.G. (eds.). Risoe National Lab., Roskilde (Denmark). Optics and Fluid Dynamics Dept. Mar 1992. 56p. Order Number DE92644665. Source: OSTI; NTIS; INIS.

Research in the Optics and Fluid Dynamics Department covers quasi-elastic light scattering, optical and electronic information processing, continuum physics and activities in connection with the Euratom fusion association. A summary of activities in 1991 is presented. Optical diagnostic methods based on quasielastic light scattering have been developed. Beam propagation in random and nonlinear media has been investigated. Spatial and temporal processing schemes, especially for pattern recognition, have been investigated. Within the area of fluid dynamics spectral models for studying the dynamics of coherent structures have been developed. Coherent structures have been investigated in a plasma and are now also investigated in a rotating fluid. Fusion relevant work performed under the Euratom association includes investigations of turbulent transport and the development of diagnostic methods. A special activity is concentrated on the development of pellet injection systems for fusion research. (au) (1 tab., 20 ills., 37 refs.).

32500 (RISO-R-625) **Nuclear Safety Research Department. Annual progress report 1991.** Majborn, B.; Brodersen, K.; Hoejerup, C.F.; Heikel Vinther, F. (eds.). Risoe National Lab., Roskilde (Denmark). Nuclear Safety Research Dept. Mar 1992. 23p. Order Number DE92644666. Source: OSTI; NTIS; INIS.

The report describes the work of the Nuclear Safety Research Department during 1991. The activities cover health physics, reactor physics, operation of the educational reactor DR 1, and waste management. Lists of staff and publications are included together with a summary of participation in international working groups etc. (au) (5 ills., 59 refs.).

32501 (WSRC-MS-92-249) **Statistical process management: An essential element of quality improvement.** Buckner, M.R. Westinghouse Savannah River Co., Aiken, SC (United States). [1992]. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC09-89SR18035. (CONF-9208123-1: 1992 Westinghouse electronic systems group statistics symposium, Baltimore, MD (United States), 7 Aug 1992). Order Number DE92019934. Source: OSTI; NTIS; GPO Dep.

Successful quality improvement requires a balanced program involving the three elements that control quality: organization, people and technology. The focus of the SPC/SPM User's Group is to advance the technology component of Total Quality by networking within the Group and by providing an outreach within Westinghouse to foster the appropriate use of statistic techniques to achieve Total Quality. SPM encompasses the disciplines by which a process is measured against its intrinsic design capability, in the face of measurement noise and other obscuring variability. SPM tools facilitate decisions about the process that generated the data. SPM deals typically with manufacturing processes, but with some flexibility of definition and technique it accommodates many administrative processes as well. The techniques of SPM are those of Statistical Process Control, Statistical Quality Control, Measurement Control, and Experimental Design. In addition, techniques such as job and task analysis, and concurrent engineering are important elements of systematic planning and analysis that are needed early in the design process to ensure success. The SPC/SPM User's Group is endeavoring to achieve its objectives by sharing successes that have occurred within the member's own Westinghouse department as well as within other US and foreign industry. In addition, failures are reviewed to establish lessons learned in order to improve future applications. In broader terms, the Group is interested in making SPM the accepted way of doing business within Westinghouse.

32502 (ANL/CP-76324) **Memory access in shared virtual memory.** Berrendorf, R. (Zentralinstitut fuer Angewandte Mathematik Forschungszentrum Juelich, KFA (FRG)). Argonne National Lab., IL (United States). [1992]. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-9209180-1: CONPAR 92: international conference on parallel processing, Lyon (France), 1-4 Sep 1992). Order Number DE92019594. Source: OSTI; NTIS; GPO Dep.

Shared virtual memory (SVM) is a virtual memory layer with a single address space on top of a distributed real memory on parallel computers. We examine the behavior and performance of SVM running a parallel program with medium-grained, loop-level parallelism on top of it. A simulator for the underlying parallel architecture can be used to examine the behavior of SVM more deeply. The influence of several parameters, such as the number of processors, page size, cold or warm start, and restricted page replication, is studied.

32503 (ANL/CP-76726) **The efficient parallel iterative solution of large sparse linear systems.** Jones, M.T.; Plassmann, P.E. Argonne National Lab., IL (United States). Jun 1992. 16p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-9110404-1: IMA workshop on sparse matrix computations: graph theory issues and algorithms, Minneapolis, MN (United States), 14-18 Oct 1991). Order Number DE92018769. Source: OSTI; NTIS; GPO Dep.

The development of efficient, general-purpose software for the iterative solution of sparse linear systems on a parallel MIMD computer requires an interesting combination of expertise. Parallel graph heuristics, convergence analysis, and basic linear algebra implementation issues must all be considered. In this paper, we discuss how we have incorporated recent results in these areas into a general-purpose iterative solver. First, we consider two recently developed parallel graph coloring heuristics. We show how the method proposed by Luby, based on determining maximal independent sets, can be modified to run in an asynchronous manner and give aa expected running time bound for this modified heuristic. In addition, a number of graph reduction heuristics are described that are used in our implementation to improve the individual processor performance. The effect of these various graph reductions on the solution of sparse triangular systems is categorized. Finally, we discuss the performance of this solver from the perspective of two large-scale applications: a piezoelectric crystal finite-element modeling problem, and a nonlinear optimization problem to determine the minimum energy configuration of a three-dimensional, layered superconductor model.

32504 (ANL/MCS-P-69-0389) **LAPACK Working Note 9: A test matrix generation suite.** Demmel, J. (New York Univ., NY (United States). Courant Institute); McKenney, A. Argonne National Lab., IL (United States). 28 Feb 1989. 16p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. Order Number DE92019334. Source: OSTI; NTIS; GPO Dep.

We discuss the design and implementation of a suite of test matrix generators for testing linear algebra software. These routines generate random matrices with certain properties which are useful for testing linear equation solving, least squares, and eigendecomposition software. These properites include the spectrum, symmetry, bandwidth, norm, sparsity, conditioning (with respect to inversion or for the eigenproblem), type (real or complex), and storage scheme (dense, packed or banded).

32505 (ANL/TM-413-Rev.1) **Guide to computer protection at ANL: Revision 1.** Doty, M.W. (ed.); Troyer, L.J. Argonne National Lab., IL (United States). Jun 1992. 123p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. Order Number DE92040419. Source: OSTI; NTIS; GPO Dep.

This report discusses the following topics: ANL computer Protection; The ANL Computer Protection Program; and ANL Computer Protection Program Responsibilities.

32506 (CNIC-00342) **The development of computer codes for NPP fuel behavior analysis at IAE.** Zhang Yingchao (Academia Sinica, Beijing, BJ (China). Inst. of Atomic Energy); Zhang Chongzhu; Fu Guogan; Zhu Yimin; Zhang Zhongyue. China Nuclear Information Centre, Beijing, BJ (China). Oct 1989. 6p. (In Chinese). (IAE-0067.). Order Number DE93602457. Source: OSTI; NTIS (US Sales Only); INIS.

Several computer codes, PYCH-W, RYCH-T and CRAP etc. used for fuel behavior analysis of nuclear power plant (NPP) have been developed at IAE (Institute of Atomic Energy). The main results calculated by these codes agree well with that obtained by widely used foreign codes. Besides, several foreign codes, FRAPCON-2, FRAP-T6, POSHO-THERMAL, FAMREC etc. have been introduced and transplanted on CYBER-825 computer. These codes have been used or will soon be used to analyze fuel behavior for Qinshan NPP which is under construction in China. For safety analysis, FRAPCON-2, FRAP-T6 and system thermal-hydraulics codes such as RELAP4/MOD7 and RELAP5/MOD1 have been linked with each other. In practical use some problems have been found. It is desirable that some codes are to be improved further.

32507 (CNIC–00403) **The development and improvement of a fault tree program.** Zhao Xishun (Beijing Inst. of Nuclear Engineering, BJ (China)). China Nuclear Information Centre, Beijing, BJ (China). May 1990. 10p. (In Chinese). (BINE–0011.). Order Number DE93602458. Source: OSTI; NTIS (US Sales Only); INIS.

The transplanting and improvement of a fault tree program are introduced. The main improvements are adding the calculation importance of interrelated cut-sets, cutting the number of cut-set when its value is greater than the given value, the failure probability of a minimum cut-set, queuing of the interrelated cut-sets and recutting function when the failure probability of a cut-set is less than the threshold. The calculated results show that it can give the same results and the computing time can be greatly saved by using this improved program.

32508 (CNIC–00460) **Numerical research of multiple integral.** Mou Zongze (Southwest Inst. of Physics, Leshan, SC (China)); Zhao Huaiguo; Peng Congrong. China Nuclear Information Centre, Beijing, BJ (China). Dec 1990. 14p. (In Chinese). (SIP–0044.). Order Number DE93602460. Source: OSTI; NTIS (US Sales Only); INIS.

The methods, algorithms and computer codes presently available for numerical calculation of multiple integrals are reviewed. In order to cope with strong singular integrand, a numerical method is proposed, which seems very attractive to avoid numerical divergence. Seven subroutines for numerical calculation of multiple integrals are set up on personal computer IBM XT. Discussion and comparison are made by a great number of computing examples with the subroutines. Specification of the codes is given.

32509 (CONF-9105126–7) **Computer assisted audit techniques for UNIX (UNIX-CAATS).** Polk, W.T. National Inst. of Standards and Technology, Gaithersburg, MD (United States). [1991]. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AI01-83IG00049. From 14. U.S. Department of Energy (DOE) computer security group conference; Concord, CA (United States); 7-9 May 1991. Order Number DE92019011. Source: OSTI; NTIS; GPO Dep.

Federal and DOE regulations impose specific requirements for internal controls of computer systems. These controls include adequate separation of duties and sufficient controls for access of system and data. The DOE Inspector General's Office has the responsibility to examine internal controls, as well as efficient use of computer system resources. As a result, DOE supported NIST development of computer assisted audit techniques to examine BSD UNIX computers (UNIX-CAATS). These systems were selected due to the increasing number of UNIX workstations in use within DOE. This paper describes the design and development of these techniques, as well as the results of testing at NIST and the first audit at a DOE site. UNIX-CAATS consists of tools which examine security of passwords, file systems, and network access. In addition, a tool was developed to examine efficiency of disk utilization. Test results at NIST indicated inadequate password management, as well as weak network resource controls. File system security was considered adequate. Audit results at a DOE site indicated weak password management and inefficient disk utilization. During the audit, we also found improvements to UNIX-CAATS were needed when applied to large systems. NIST plans to enhance the techniques developed for DOE/IG in future work. This future work would leverage currently available tools, along with needed enhancements. These enhancements would enable DOE/IG to audit large systems, such as supercomputers.

32510 (CONF-9205214–) **DATA: How to generate, store, retrieve, communicate, and interpret it: Proceedings.** Carlson, R.E. (ed.). Lawrence Livermore National Lab., CA (United States). Jul 1992. 245p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. From High speed computing conference; Glenenden Beach, OR (United States); 11-14 May 1992. Order Number DE92040405. Source: OSTI; NTIS; GPO Dep.

This report contains viewgraphs covering the following topics: Considerations for the evolution of high speed networking; gigabit networks; status of LLNL's prototype gigabit/sec Lan; distributed data server infrastructure for seismic processing on a new spectrum of computing platforms, sequoia 2000: computer science applied to global change research; toward transparent, distributed storage systems; Lanl's high-performance data system; the data millieu for climate modeling at the national center for atmospheric research; the pass project: database computing for the SSC; a comparison of three application dependent mass storage systems; striped arrays of tertiary storage devices; abstracts: a technique for hiding latency in a mass-storage system; marching cubes on the CM-2; A carpetbagger's guide to the human genome project; global change research, large data sets and landsat pathfinder; organizing and interpreting data in a modeling and simulation environment; high- resolution adaptive methods for compressible flow; future computers - an intellectual power grid and; high speed computing in the '90's: the technologies and the delivery.

32511 (CONF-9206152–1) **Driving a car with custom-designed fuzzy inferencing VLSI chips and boards.** Pin, F.G.; Watanabe, Y. Oak Ridge National Lab., TN (United States). [1992]. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. (CESAR–92/11A). From International joint technology workshop on fuzzy logic and neural networks; Houston, TX (United States); 1-3 Jun 1992. Source: OSTI; NTIS; GPO; OSTI; NTIS; GPO Dep.

Short communication. AUTOMOBILES/computerized control systems; COMPUTERIZED CONTROL SYSTEMS/fuzzy logic; AUTOMOBILES; INTEGRATED CIRCUITS; ARTIFICIAL INTELLIGENCE; NAVIGATION; NEURAL NETWORKS

32512 (CONF-9209109–2) **Speedup properties of phases in the execution profile of distributed parallel programs.** Carlson, B.M. (Oak Ridge National Lab., TN (United States)); Wagner, T.D.; Dowdy, L.W.; Worley, P.H. Oak Ridge National Lab., TN (United States). [1992]. 14p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. From 6. international conference on modelling techniques and tools for performance evaluation; Edinburgh (United Kingdom); 16-18 Sep 1992. Order Number DE92019965. Source: OSTI; NTIS; GPO Dep.

The execution profile of a distributed-memory parallel program specifies the number of busy processors as a function of time. Periods of homogeneous processor utilization are manifested in many execution profiles. These periods can usually be correlated with the algorithms implemented in the underlying parallel code. Three families of methods for smoothing execution profile data are presented. These approaches simplify the problem of detecting end points of periods of homogeneous utilization. These periods, called phases, are then examined in isolation, and their speedup characteristics axe explored. A specific workload executed on an Intel iPSC/860 is used for validation of the techniques described.

32513 (CONF-9210136–2) **Identifying and building an expert system: The programmer's role.** Crutcher, J.W. Martin Marietta Energy Systems, Inc., Oak Ridge, TN (United States). [1992]. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. From American Society of Information Science (ASIS) annual meeting; Pittsburgh, PA (United States); 26-29 Oct 1992. Order Number DE92018740. Source: OSTI; NTIS; GPO Dep.

A customer wants a computer program or perhaps "some training." Would the customer's needs be better met by an expert system? If the needs analysis reveals some of the following problems, the answer may be yes. Bottle neck situations that can be resolved with "expert" information. Recurring problems that can be solved with flow chart logic. Tedious, hard-to-decipher processes or mathematical equations that are repetitious and prone to human error. Processes that require drawing information from huge databases. Confusing, sometimes seemingly conflicting information that may be documented in tomes of regulations and procedures. What do these problems have in common? Information. More specifically, information that is difficult to access and/or understand-information that most likely resides with one or more human experts.

32514 (CONF-9210148–1) **ScaLAPACK: A scalable linear algebra library for distributed memory concurrent computers.** Choi, Jaeyoung (Oak Ridge National Lab., TN (United States)); Walker, D.W.; Dongarra, J.J.; Pozo, R. Oak Ridge National Lab., TN (United States). [1992]. 9p. Sponsored by USDOE, Washington, DC (United States); Department of Defense, Washington, DC (United States). DOE Contract AC05-84OR21400. Contract DAAL03-91-C-0047. From 4. symposium on frontiers of massively parallel computing; McLean, VA (United States); 19-21 Oct 1992. Order Number DE92017823. Source: OSTI; NTIS; GPO Dep.

This paper describes ScaLAPACK, a distributed memory version of the LAPACK software package for dense and banded matrix computations. Key resign features are the use of distributed versions of the Level 3 BLAS as building blocks, and an object-based interface to the library routines. The square block scattered decomposition is described. The implementation of a distributed memory version of the right-looking LU factorization algorithm on the Intel Delta multicomputer is discussed, and performance results are presented that demonstrate the scalability of the algorithm.

32515 (DOE/ER/61215–1) **[Studies of ocean predictability at decade to century time scales using a global ocean general circulation model in a parallel competing environment]: Progress report.** California Univ., San Diego, La Jolla, CA (United States). 10 Mar 1992. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG03-91ER61215. Order Number DE92019457. Source: OSTI; NTIS; GPO Dep.

The first phase of the proposed work is largely completed on schedule. Scientists at the San Diego Supercomputer Center (SDSC) succeeded in putting a version of the Hamburg isopycnal coordinate ocean model (OPYC) onto the INTEL parallel computer. Due to the slow run speeds of the OPYC on the parallel machine, another ocean is being model used during the first part of phase 2. The model chosen is the Large Scale Geostrophic (LSG) model form the Max Planck Institute.

32516 (ECN-I–92-015) **A shortcoming of NITAWL/BONAMI causing problems in KENO calculations.** Kruijf, W.J.M. de (Netherlands Energy Research Foundation (ECN), Petten (Netherlands)); Li Jianmang. Netherlands Energy Research Foundation (ECN), Petten (Netherlands). May 1992. 18p. Order Number DE93602462. Source: OSTI; NTIS; INIS.

A serious error may occur in Monte Carlo calculations with the code KENO-Va if self-shielding of the fissile isotopes is important and if the quantity ν-σ_f is given under MT=1452 on the AMPX-W data file. It appears that this product has not been corrected for the self-shielding, which should have been done in the BONAMI and the NITAWL modules. Other complications may arise if first- and higher-chance fission cross-sections are given separately on the AMPX-M data file. The subroutine CRRCT of the NITAWL module and the subroutines FUDGE and FODGE of the BONAMI module have been improved to overcome these problems. (author). 5 refs.; 1 fig.; 3 tabs.

32517 (ECN-RX–91-063) **Simplified modeling and code usage in the PASC-3 code system by the introduction of a programming environment: Contribution to 'International Conference on Nuclear Criticality Safety-INC'91', Oxford, UK, 9-13 September 1991.** Pijlgroms, B.J. (Netherlands Energy Research Foundation (ECN), Petten (Netherlands)); Oppe, J.; Oudshoorn, H.L.; Slobben, J. Netherlands Energy Research Foundation (ECN), Petten (Netherlands). Jun 1991. 12p. (CONF-910993–: International conference on nuclear criticality (ICNC) safety, Oxford (United Kingdom), 9-13 Sep 1991). Order Number DE93602463. Source: OSTI; NTIS; INIS.

A brief description is given of the PASC-3 (Petten-AMPX-SCALE) Reactor Physics code system and associated UNIPASC work environment. The PASC-3 code system is used for criticality and reactor calculations and consists of a selection from the Oak Ridge National Laboratory AMPX-SCALE-3 code collection complemented with a number of additional codes and nuclear data bases. The original codes have been adapted to run under the UNIX operating system. The recommended nuclear data base is a complete 219 group cross section library derived from JEF-1 of which some benchmark results are presented. By the addition of the UNIPASC work environment the usage of the code system is greatly simplified. Complex chains of programs can easily be coupled together to form a single job. In addition, the model parameters can be represented by variables instead of literal values which enhances the readability and may improve the integrity of the code inputs. (author). 8 refs.; 6 figs.; 1 tab.

32518 (EGG-M–91471) **"You need this done by when?": Increasing your efficiency with the SAS® system.** DeHaan, M.S. EG and G Idaho, Inc., Idaho Falls, ID (United States). [1992]. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC07-76ID01570. (CONF-920426–3: 17. annual atomic spectroscopy safeguards and security (SAS) users group international symposium, Honolulu, HI (United States), 12 Apr 1992). Order Number DE92017894. Source: OSTI; NTIS; GPO Dep.

The SAS institute publication – SAS Programming Tips: A Guide to Efficient SAS Processing defines efficiency as "obtaining more results from fewer computer or human resources." While this publication contains many very useful tips, it seems to concentrate mostly on computer efficiency. This paper will focus on ways of increasing your efficiency in developing, writing, and debugging SAS programs, i.e. increasing human efficiency. In my job as a consulting statistician, my programs are usually one-run programs. That is, I develop and test a program, then I run them once to get the results I need, and the program is typically never used again. Even for multiple run jobs, the greatest expense by far is the time used to develop a program, and any CPU/hardware "expense" is relatively insignificant. I believe that this is true for most SAS system users and that not enough attention has been given to this aspect of "cost". While most of these tips and techniques were developed under the PC platform, nearly all are applicable and useful under all SAS supported platforms. Some of the tips the experienced SAS programmer may already be familiar with, but many should be new and useful to both novice and veteran users.

EG and G Idaho, Inc., Idaho Falls, ID (United States). 1 May 1992. Sponsored by USDOE, Washington, DC (United States); Nuclear Regulatory Commission, Washington, DC (United States). Office of Nuclear Regulatory Research; Department of Defense, Washington, DC (United States). Source: ESTSC.

Description: IBM PC/AT; MS-DOS 3.1; Alsys ADA 4.33 (92%) and Assembler (8%); 10 3.50 Diskettes. The Alsys Ada 4.33 compiler is required. Earlier releases of ADA (i.e., 4.2,4.23, etc.) are incompatible with ADASAGE4.0. The ADASAGE reference documents are written in ARC format and, when extracted, must be printed with WORDPERFECT.

ADASAGE4.0 is an application development system designed to facilitate rapid and professional construction of applications written in Ada on microcomputers. Applications may vary in size from small to large multiprogram systems. ADASAGE4.0 consists of a collection of re-usable libraries for database management and form and report processing utilities having the following capabilities: basic universal type and function definitions; sequential file input/output; terminal and file input/output; DOS system command execution; data movement and fill; string manipulation; math libraries; bit manipulation; a relational database utility; data validation; menu form and window procedures; report generation; sort/merge, time, and date functions; sound production; editing; and index rebuilding. These capabilities are integrated to allow the development of an efficient system. As an application is designed and developed, ADASAGE capabilities are selected and included along with any requirements unique to that application.

32520 (ESTSC–000190IBMPC01) **PMAS4.0: Performance Measurement Analysis System.** Stoeckle, K. (USDOE Office of Project and Facilities Management, (United States)). USDOE, Washington, DC (United States). 1 May 1990. Sponsored by USDOE, Washington, DC (United States). (NESC–9671). Source: ESTSC.

Description: IBM PC; PC DOS; dBASE III; 1 5.25 Diskette.

The PMAS4.0 (Performance Measurement Analysis System) is a user-oriented system designed to track the cost and schedule performance of Department of Energy (DOE) major projects (MPs) and major system acquisitions (MSAs) reporting under DOE Order 5700.4A, Project Management System. PMAS4.0 provides for the analysis of performance measurement data produced from management control systems complying with the Federal Government's Cost and Schedule Control Systems Criteria.

32521 (ESTSC–000208GE63500) **GENED ENV ROUTINES: Subroutine library.** Wassem, F.A. (General Electric Company, San Jose, CA (United States)). General Electric Co., Sunnyvale, CA (United States). Advanced Reactor Systems Dept. 17 Nov 1971. Sponsored by USDOE, Washington, DC (United States). (NESC–515). Source: ESTSC.

Description: GE635; GECOS; FORTRAN IV and GMAP; 1 Mag Tape.

The GENED ENVIRONMENTAL ROUTINES consists of a set of standard routines written at the General Electric Nuclear Energy Division and a set of standard GE635 system routines. A partial list of routines includes the following; BITA moves bits from one word to another without altering those bits outside the range of the call. CASE positions an input file so that the input data following a case card can be read. DRAW is a general-purpose plotting routine used to (a) draw a grid network, (b) label the grid network, (c) draw curves within the grid network, (d) allow two different y-axis values, and (e) produce a bar or histogram plot. FLTBCD converts a FORTRAN floating-point number to a BCD number in either F or E format. HELP is used to supply a user with the type of device (tape/disk/drum) and the number of links used if the device is a disk or drum unit. ISERVE is a function with various options to pick up and/or convert one of the following - date, clock time, case number, user identification, and computer processor time. ISUP permits the user to suppress a fixed-point number or binary configuration when printing or punching with FORTRAN I/O. LISTFORM consists of two subprograms, JGEGEN and JGEOUT, and enables the FORTRAN user to write output tapes (for printing or punching) in a more efficient and faster manner than is possible with a FORTRAN WRITE (I,N) LIST statement, which must scan the FORMAT statement each time output is initiated. PLOTRC provides a series of CalComp plotter routines. RWSBT manipulates information in binary form on tape, disk, or drum physical devices. VAMPIR provides the complete setup of linear graphs to be produced on a digital plotter.

32522 (ESTSC–000218IBMPC01) **BOILER PERF MODEL3.0: Fossil-fired boilers.** Winslow, J.C. (USDOE, Pittsburgh Energy Technology Center, PA (United States)). USDOE Pittsburgh Energy Technology Center, PA (United States). 1 May 1992. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC22-89PC88400. Source: ESTSC.

Description: IBM PC; DOS 3.1; Microsoft QuickBASIC; 5 3.5 Diskettes. The BOILER PERFORMANCE MODEL source is not available.

The BOILER PERFORMANCE MODEL 3.0 is a package of thirteen programs for predicting the heat transfer performance of fossil-fired utility boilers. The programs can model a wide variety of boiler designs, provide boiler performance estimates for coal, oil or gaseous fuels, determine the influence of slagging and fouling characteristics on boiler performance, and calculate performance factors for tradeoff analyses comparing boilers and fuels. Given a set of target operating conditions, the programs can estimate control settings, gas and steam operating profiles through the boiler, overall boiler efficiency, and fuel consumption. The programs are broken into three categories: data, calculation, and reports with a central processor program acting as the link allowing the user to access any of the data or calculation programs and easily move between programs. The calculations are divided among the following five programs: heat duty calculation, combustion calculation, furnace performance calculation, convection pass performance calculation, and air heater performance calculation. The programs can model subcritical or supercritical boilers, most configurations of convective passes including boilers that achieve final reheat steam temperature control by split back pass, boilers with as many as two reheat circuits and/or multiple attemperator stations in series, and boilers with or without economizers and/or air heaters. Either regenerative or tubular air heaters are supported. For wall-fired or tangentially-fired furnaces, the furnace performance program predicts the temperature of the flue gases leaving the furnace. It accounts for variations in excess air, gas recirculation, burner tilt, wall temperature, and wall cleanliness. For boilers having radiant panels or platens above the furnace, the convective pass program uses the results of the combustion chamber calculation to estimate the gas temperature entering the convective pass.

32523 (ESTSC–000277MNFRM00) **SWEB: Scientific Workstation Evaluation Benchmark.** Raffenetti, R.C. (Argonne National Lab., IL (United States)). Argonne National Lab., IL (United States). 2 Apr 1984. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (NESC–9717). Source: ESTSC.

Description: MAINFRAMES; Machine Independent; FORTRAN 77; 1 Mag Tape.

The SCIENTIFIC WORKSTATION EVALUATION BENCHMARK software includes 16 programs which are executed in a well-defined scenario to measure the following performance capabilities of a scientific workstation: implementation of FORTRAN77, processor speed, memory management, disk I/O, monitor (or display) output, scheduling of processing (multiprocessing), and scheduling of print tasks (spooling). The benchmark programs are: DK1, DK2, and DK3, which do Fourier series fitting based on spline techniques; JC1, which checks the FORTRAN function routines which produce numerical results; JD1 and JD2, which solve dense systems of linear equations in double and single-precision, respectively; JD3 and JD4, which perform matrix multiplication in single and double-precision, respectively; RB1, RB2, and RB3, which perform substantial amounts of I/O processing on files other than the input and output files; RR1, which does intense single-precision floating-point multiplication in a tight loop; RR2, which initializes a 512x512 integer matrix in a manner which skips around in the address space rather than initializing each consecutive memory cell in turn; RR3, which writes alternating text buffers to the output file; RR4, which evaluates the timer routines and demonstrates that they conform to the specification; and RR5, which determines whether the workstation is capable of executing a 4-megabyte program.

32524 (ESTSC–000323I037000) **SAGEWASP: Optimal electric utility expansion.** Jenkins, R.T. (Tennessee Valley Authority, Knoxville, TN (United States)); Joy, D.S. Oak Ridge National Lab., TN (United States). 1 Jul 1974. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-26. (NESC–744). Source: ESTSC.

Description: IBM370; The program was developed on theFORTRAN IV; 1 Mag Tape. Eleven disk files are created by the program and up to six of these are used by an individual program.

SAGE-WASP is designed to find the optimal generation expansion policy for an electrical utility system. New units can be automatically selected from a user-supplied list of expansion candidates which can include hydroelectric and pumped-storage projects. The existing system is modeled. The calculational procedure takes into account user restrictions to limit generation configurations to an area of economic interest. The optimization program reports whether the restrictions acted as a constraint on the solution. All expansion configurations considered are required to pass a user-supplied reliability criterion. The discount rate and escalation rate are treated separately for each expansion candidate and for each fuel type. All expenditures are separated into local and foreign accounts, and a weighting factor can be applied to foreign expenditures.

32525 (ESTSC–000324SUN0000) **EQ3/6 V7.0: Geochemical modeling of aqueous systems.** Wolery, T.J. (Lawrence Livermore National Lab., CA (United States)). Lawrence Livermore National Lab., CA (United States). 10 Dec 1990. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Source: ESTSC.

Description: SUN; UNIX, generally speaking. VMS anANSI FORTRAN 77; 2 3.5 diskettes. EQ3NR input files end in .3i, EQ6 input files end in .6i. This is a recommended convention, and it is required in order to run these codes using the RUNEQ36 script. The data file names have the form exemplified by data0.comR10. Here com is one of the five data file descriptors and R10 is a stage number(a configuration control identifier). This general form is required to run the RUNEQPT script. Text files in the package end in .txt. FORTRAN source files end in .fsc. The EQLIB library which is part of the package, supports the EQPT,EQ3NR and EQ6 codes.

EQ3/6 is a software package for geochemical modeling of aqueous systems. This description pertains to version 7.0. The major components of the package include: EQ3NR a speciation-solubility code; EQ6, a reaction path code which models water/rock interaction or fluid mixing in either a pure reaction progress mode or a time mode; EQPT, a data file preprocessor; EQLIB, a supporting software library; and five supportingthermodynamic data files. The software deals with the concepts of thermodynamic equilibrium, thermodynamic disequilibrium, and reaction kinetics. The five supporting data files contain both standard state and activity coefficient-related data. Three support the use of the Davies or B-dot equations for the activity coefficients; the other two support the use of Pitzes's equations. The temperature range of the thermodynamic data on the data files varies from 25 degrees C only to 0-300 degrees C. EQ3NR is useful for analyzing groundwater chemistry data, calculating solubility limits, and determining whether certain reactions are in states of partial equilibrium or disequilibrium. It is also required to initialize an EQ6 calculation. EQ6 models the consequences of reacting an aqueous solution with a specified set of reactants. It can also model fluid mixing and the effects of changes in temperature. This code operates in a pure reaction progress frame (e.g., makes equilibrium step calculations with no time variable) or in a time frame.

32526 (ESTSC–000324SUN0001) **EQ3/6 V7.1: Geochemical modeling of aqueous systems.** Wolery, T.J. (Lawrence Livermore National Lab., CA (United States)). Lawrence Livermore National Lab., CA (United States). 1 Sep 1992. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (NESC–886). Source: ESTSC.

Text files in the package end in .txt. FORTRAN source files end in .fsc. The EQLIB library which is part of the package, supports the EQPT,EQ3NR and EQ6 codes.

EQ3/6 is a software package for geochemical modeling of aqueous systems. This description pertains to version 7.1. It differs from version 7.0 in that a number of bugs have been fixed, most of which pertain to portability. It also contains a newer set of supporting data files. The major components of the package include: EQ3NR a speciation-solubility code; EQ6, a reaction path code which models water/rock interaction or fluid mixing in either a pure reaction progress mode or a time mode; EQPT, a data file preprocessor; EQLIB, a supporting software library; and five supporting thermodynamic data files. The software deals with the concepts of thermodynamic equilibrium, thermodynamic disequilibrium, and reaction kinetics. The five supporting data files contain both standard state and activity coefficient-related data. Three support the use of the Davies or B-dot equations for the activity coefficients; the other two support the use of Pitzes's equations. The temperature range of the thermodynamic data on the data files varies from 25 degrees C only to 0-300 degrees C. EQPT is a data file preprocessor. EQ3NR is a speciation solubility code that is useful for analyzing groundwater chemistry data, calculating solubility limits, and determining whether certain reactions are in states of partial equilibrium or disequilibrium. It is also required to initialize an EQ6 calculation. EQ6 is a reaction-path code. It models the consequences of reacting an aqueous solution with a specified set of reactants. It can also model fluid mixing and the effects of changes in temperature. This code operates in a pure reaction progress frame (e.g., makes equilibrium step calculations with no time variable) or in a time frame.

32527 (ESTSC–000369MNFRM00) **LFK: Livermore FORTRAN kernel computer test.** McMahon, F.H. (Lawrence Livermore National Lab., CA (United States)). Lawrence Livermore National Lab., CA (United States). 1 Dec 1986. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (NESC–9426). Source: ESTSC.

Description: MAINFRAMES; Machine Dependent; FORTRAN 77 (84%) and C (16%); 1 Mag Tape.

LFK, the Livermore FORTRAN Kernels, is a computer performance test that measures a realistic floating-point performance range for FORTRAN applications. Informally known as the Livermore Loops test, the LFK test may be used as a computer performance test, as a test of compiler accuracy (via checksums) and efficiency, or as a hardware endurance test. The LFK test, which focuses on FORTRAN as used in computational physics, measures the joint performance of the computer CPU, the compiler, and the computational structures in units of Megaflops/sec or Mflops. A C language version of subroutine KERNEL is also included which executes 24 samples of C numerical computation. The 24 kernels are a hydrodynamics code fragment, a fragment from an incomplete Cholesky conjugate gradient code, the standard inner product function of linear algebra, a fragment from a banded linear equations routine, a segment of a tridiagonal elimination routine, an example of a general linear recurrence equation, an equation of state fragment, part of an alternating direction implicit integration code, an integrate predictor code, a difference predictor code, a first sum, a first difference, a fragment from a two-dimensional particle-in-cell code, a part of a one-dimensional particle-in-cell code, an example of how casually FORTRAN can be written, a Monte Carlo search loop, an example of an implicit conditional computation, a fragment of a two-dimensional explicit hydrodynamics code, a general linear recurrence equation, part of a discrete ordinates transport program, a simple matrix calculation, a segment of a Planckian distribution procedure, a two-dimensional implicit hydrodynamics fragment, and determination of the location of the first minimum in an array.

32528 (ESTSC–000392C017600) **VERTPAK1: Code verification analytic solution.** Golis, M.J. (Battelle Columbus Div., OH (United States)). Battelle, Columbus, OH (United States). 1 Apr 1983. Sponsored by USDOE, Washington, DC (United States). (NESC–9826). Source: ESTSC.

Description: CDC CYBER176; NOS 1.4 (CDC CYBER176); NOS 2.5.FORTRAN IV; 1 Mag Tape.

VERTPAK1 is a package of analytical solutions used in verification of numerical codes that simulate fluid flow, rock deformation, and solute transport in fractured and unfractured porous media. VERTPAK1 contains the following: BAREN, an analytical solution developed by Barenblatt, Zhelton and Kochina (1960) for describing transient flow to a well penetrating a (double porosity) confined aquifer; GIBMAC, an analytical solution developed by McNamee and Gibson (1960) for describing consolidation of a semi-infinite soil medium subject to a strip (plane strain) or cylindrical (axisymmetric) loading; GRINRH, an analytical solution developed by Gringarten (1971) for describing transient flow to a partially penetrating well in a confined aquifer containing a single horizontal fracture; GRINRV, an analytical solution developed by Gringarten, Ramey, and Raghavan (1974) for describing transient flow to a fully penetrating well in a confined aquifer containing a single vertical fracture; HART, an analytical solution given by Nowacki (1962) and implemented by HART (1981) for describing the elastic behavior of an infinite solid subject to a line heat source; LESTER, an analytical solution presented by Lester, Jansen, and Burkholder (1975) for describing one-dimensional transport of radionuclide chains through an adsorbing medium; STRELT, an analytical solution presented by Streltsova-Adams (1978) for describing transient flow to a fully penetrating well in a (double porosity) confined aquifer; and TANG, an analytical solution developed by Tang, Frind, and Sudicky (1981) for describing solute transport in a porous medium containing a single fracture.

32529 (ESTSC–000418C017000) **GRENADE: 3d multigp diffusion Green's function.** Costescu, C. (Institute for Nuclear Power Reactors, Pitesti (Romania)). Institutul de Reactori Nucleari Energetici, Pitesti (Romania). 1 Oct 1985. Sponsored by Institutul de Reactori Nucleari Energetici, Pitesti (Romania). (NESC–9625). Source: ESTSC.

Description: CDC CYBER170; NOS 1.4; FORTRAN IV; 1 Mag Tape. GRENADE makes use of CDC operating system routines

(DATE, TIME, and SECOND),mass storage input/output subroutines (OPENMS, WRITMS, READMS, and CLOSMS), and the dynamic memory allocation system subprograms (CMMALF and LOCF). The bulk of the data kept in the high speed memory is organized in arrays corresponding to a particular x-y plane. Data for all x-y planes are stored on mass storage random access files.

GRENADE is designed to solve the static diffusion equation for neutrons in multidimensional problems, assuming Cartesian geometry. The program calculates the flux and power distributions and k-effective, the effective neutron multiplication factor.

32530 (ESTSC–000443I036000) **AISITE2: Parametric site requirement study.** Blaine, R.A. (Rockwell International Rocketdyne Div., Canoga Park, CA (United States)). IBM Scientific Center, Palo Alto, CA (United States). 1 Sep 1964. Sponsored by USDOE, Washington, DC (United States). (NESC–172). Source: RADIATION SHIELDING INFORMATION CENTER.

Description: IBM360; OS/360; FORTRAN IV; 1 Mag Tape. Dummy routines can be used for SC-4020 subroutines GRAPH and AICRT3, or these routines can be rewritten.

AISITE2 is largely based on methods proposed by the AEC in TID-14844 but differs in certain of the assumptions and models. The code automatically varies any one of 46 parameters such as reactor power, building leak rate, iodine clean-up rate, and halogen filter efficiency, computing the exclusion area, and low population boundary zones as functions of that parameter. The edit includes dose vs. distance data, fractional contribution by isotope group to the inhalation dose, and critical distances providing both printed and graphical data. Three models are available for fission product release with up to four levels of containment.

32531 (ESTSC–000448I037000) **APARNA2: 1-d integral neutron transport slab.** Vaidyanathan, R. (Atomic Energy Establishment, New Delhi (India)). Atomic Energy Establishment, Trombay (India). 1 Apr 1977. Sponsored by Atomic Energy Establishment, Trombay (India). (NESC–878). Source: RADIATION SHIELDING INFORMATION CENTER.

Description: IBM370; OS/370; FORTRAN IV; 1 Mag Tape.

APARNA2 solves the one-dimensional integral neutron transport equation with anisotropic scattering in slab geometry.

32532 (ESTSC–000454C660000) **LEOPARDSPOTS: Spectrum calc with depletion.** Handly, B. (University of Texas, Austin (United States)); Hwang, W.G. Texas Univ., Austin, TX (United States). 1 Feb 1990. Sponsored by USDOE, Washington, DC (United States). (NESC–279). Source: RADIATION SHIELDING INFORMATION CENTER.

Description: CDC6600; NOS2.4.3; FORTRAN IV. IBM360 FORTRAN IV H-level compiler library file.

LEOPARD is a unit cell homogenization and spectrum generation (MUFT-SOFOCATE type) program with a fuel depletion option.

32533 (ESTSC–000454I036000) **LEOPARDSPOTS: Spectrum calc with depletion.** Barry, R.F. (Westinghouse Electric Corporation, Pittsburgh, PA (United States)). Westinghouse Electric Corp., Pittsburgh, PA (United States). Atomic Power Div. 1 Feb 1977. Sponsored by USDOE, Washington, DC (United States). (NESC–279). Source: RADIATION SHIELDING INFORMATION CENTER.

Description: IBM360; OS/360; FORTRAN IV(H). IBM360 FORTRAN IV H-level compiler library file.

LEOPARD is a unit cell homogenization and spectrum generation (MUFT-SOFOCATE type) program with a fuel depletion option.

32534 (ESTSC–000454U110800) **LEOPARDSPOTS: Spectrum calc with depletion.** Krug, H.E.P. (US Nuclear Regulatory Commission, Washington, DC (United States)). Jersey Nuclear Co., Richland, WA (United States). 1 Feb 1977. Sponsored by USDOE, Washington, DC (United States). (NESC–279). Source: RADIATION SHIELDING INFORMATION CENTER.

Description: UNIVAC1108; EXEC2; FORTRAN V. IBM360 FORTRAN IV H-level compiler library file.

LEOPARD is a unit cell homogenization and spectrum generation (MUFT-SOFOCATE type) program with a fuel depletion option.

32535 (ESTSC–000456U110000) **SUBDOSA: External dose airborne radionuclides.** Strenge, D.L. (Pacific Northwest Lab., Richland, WA (United States)); Watson, E.C.; Houston, J.R. Oak Ridge National Lab., TN (United States). 1 Jan 1981. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (NESC–924). Source: RADIATION SHIELDING INFORMATION CENTER.

Description: UNIVAC1100; EXEC8; FORTRAN; 1 Mag Tape. This program should be compiled with the ASCII FORTRAN (FTN) compiler.

SUBDOSA calculates external gamma and beta doses to individuals from the accidental release of radionuclides to the atmosphere. Doses are calculated as a function of: quantity released, duration of release, atmospheric conditions during the release, and horizontal distance from the release point. Doses from both gamma and beta radiation are calculated as a function of depth in tissue, summed and reported as skin, eye, gonadal, and total body dose. Doses are calculated within each of several release time intervals with separate nuclide inventories and atmospheric dispersion conditions used for each interval. Radioactive decay using a chain decay scheme with branching to account for transitions to and from isomeric states is considered during the release. The program computes normalized air concentrations at ground level as a function of distance from the point of release.

32536 (ESTSC–000457U110000) **DACRIN: Radiation organ dose from inhalation.** Houston, J.R. (Pacific Northwest Lab., Richland, WA (United States)); Strenge, D.L.; Watson, E.C. Oak Ridge National Lab., TN (United States). 1 Dec 1974. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (NESC–923). Source: RADIATION SHIELDING INFORMATION CENTER.

Description: UNIVAC1100; EXEC8; FORTRAN; 1 Mag Tape. This program should be compiled with the ASCII FORTRAN (FTN) compiler.

DACRIN is designed to provide rapid and consistent estimates of the effective radiation dose to the human respiratory tract and other organs resulting from the inhalation of radioactive aerosols. The program will calculate the effective radiation dose to any of 18 organs and tissues from inhalation of any one or a combination of radionuclides considered by the International Commission on Radiological Protection (ICRP). Input to the program consists of a few program control variables, the duration of inhalation exposure, ventilation rate, the time interval within which the dose is delivered, the organs of interest, the quantity of the radionuclide inhaled, its solubility class and particle size, and, when an atmospheric dispersion model is invoked, the additional parameters required for the model selected. Output provided by DACRIN consists of the effective radiation dose to the specified organs at selected time intervals for each radionuclide inhaled as indicated by the input data.

32537 (ESTSC–000458I037000) **CURIE: Fission product inventory decay history.** Klickman, A.E. (Argonne National Lab., IL (United States)); Froehle, P.H. Argonne National Lab., IL (United States). 1 Aug 1978. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (NESC–196). Source: RADIATION SHIELDING INFORMATION CENTER.

Description: IBM370; OS/370; FORTRAN IV; 1 Mag Tape.

CURIE calculates the fission product inventory decay history for fuel that has been in operation for a specified duration. The inventory decay history is provided for specified nuclides and elements, as well as the total fission products.

32538 (ESTSC–000463C760000) **LDEF-SS: Two-phase fluid flow in spray dryers.** O'Rourke, P.J. (Los Alamos National Lab., NM (United States)). Los Alamos National Lab., NM (United States). 1 Jul 1982. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (NESC–1027). Source: ESTSC.

Description: CDC7600; LTSS (CDC7600); NOS 1.4 (CDC CYB-FORTRAN 77; 1 Mag Tape. Due to the iterative nature of the calculations in LDEF-SS, machine round-off error may produce slightly different results on different machines. For the CDC version, the FORTRAN compiler option, ROUND, should be invoked to duplicate the sample problem output. This version includes NESC-provided dummy routines for the LANL Stromberg-Carlson plotter routines: ADV, DRV. GPLOT, GRPHFTN, GRPHLUN, LIB4020, LINCNT, PLT, and SETFLSH, which should be replaced with suitable alternatives for the environment in which the program is being executed to obtain graphical output.

LDEF-SS solves the equations for the two-phase fluid flow in spray dryers. It calculates, by a particle method, the dynamics and vaporization of a single component liquid spray. The spray is fully-coupled to a two-component gas, consisting of an inert species and the vapor of the liquid. The effects of drop collisions and coalescence are included. The geometry is spatially two-dimensional and axisymmetric, and swirling motion is permitted about the dryer axis. A wide variety of dryer parameters, such as dryer size and geometry and atomizer size and speed, and operating conditions, such as gas-flow rates and temperatures, can be specified by user-supplied parameters. Program output includes contour, vector, and spray plots, supplemented by numerical results.

32539 (ESTSC–000463I303300) **LDEF-SS: Two-phase fluid flow in spray dryers.** Marks, M.D. (Dow Chemical, Midland, MI (United States)). Dow Chemical U.S.A., Midland, MI (United States). 1 Jul 1982. Sponsored by USDOE, Washington, DC (United States). (NESC–1027). Source: ESTSC.

Description: IBM3033; VM/CMS (IBM4331); MVS/TSO (IBM30FORTRAN 77 (88%) and BAL (12%); 1 Mag Tape. Due to the iterative nature of the calculations in LDEF-SS, machine round-off error may produce slightly different results on different machines. In the IBM3033 version, subroutines DTIME and DATES are written in assembly language; they return the time of day and date information, respectively. Proprietary CalComp plotting routines PLOT, PLOTS, NEWPEN, WHERE, NUMPEN, and SYMBOL, used to provide the graphic output in the IBM version, are not included and should be replaced with alternatives suited to the local computing environment for graphical output.

LDEF-SS solves the equations for the two-phase fluid flow in spray dryers. It calculates, by a particle method, the dynamics and vaporization of a single component liquid spray. The spray is fully-coupled to a two-component gas, consisting of an inert species and the vapor of the liquid. The effects of drop collisions and coalescence are included. The geometry is spatially two-dimensional and axisymmetric, and swirling motion is permitted about the dryer axis. A wide variety of dryer parameters, such as dryer size and geometry and atomizer size and speed, and operating conditions, such as gas-flow rates and temperatures, can be specified by user-supplied parameters. Program output includes contour, vector, and spray plots, supplemented by numerical results.

32540 (ESTSC–000464I308100) **PROGLOOK: User program performance monitor.** Johnson, R.H. (Stanford Linear Accelerator Center, CA (United States)). Stanford Linear Accelerator Center, Menlo Park, CA (United States). 15 May 1976. Sponsored by USDOE, Washington, DC (United States). (NESC–642). Source: ESTSC.

Description: IBM3081; OS/360; FORTRAN IV and Assembly language; 1 Mag Tape. PROGLOOK monitoring overhead is on the order of 6 percent. PROGLOOK consists of two programs PROGTIME and PROGLOOK. PROGTIME is an Assembly language program which uses the interval timer to catch a picture of any program running under it and records this information in a data set, PROGLOOK is a FORTRAN program which uses the data set produced by PROGTIME to create the summary reports and plots.

PROGLOOK makes it possible to monitor the execution of virtually any OS/MVT or OS/VS2 Release 1.6 load module. The main reason for using PROGLOOK is to find out which portions of a code use most of the CPU time so that those parts of the program can be rewritten to reduce CPU time. For large production programs, users have typically found it possible to reduce CPU time by 10 to 30 percent without changing the program's function.

32541 (ESTSC–000465I036000) **AILMOE: X-section calc elastic scat resonances.** Blaine, R.A. (IBM, Palo Alto, CA (United States)). IBM Scientific Center, Palo Alto, CA (United States). 1 Apr 1966. Sponsored by USDOE, Washington, DC (United States). (NESC–147). Source: RADIATION SHIELDING INFORMATION CENTER.

Description: IBM360; OS/360; FORTRAN IV (H); 1 Mag Tape. Non-IBM users must provide their own means for reading past a tape mark. This function is provided by the file function at NAA. IBM System/360 users will need to modify the data definition (DD) cards to conform with the standards of their installations. The distributed procedure assumes that AILMOE resides in the link library with program name W00009. The data set name for the coarse group library is W00009.ANLXEC and for the Legendre coefficient library is W00009.ANLLEG. The remainder of the data sets are explained in the AI installation environment report. This procedure must reside in the PROCLIB with member name W00009 to function as described in the System/360 conversion notice. FORTRAN data set reference number 14 is used for the punched output.

AILMOE is a modified form of the ANL ELMOE program. The Fourier transform of the fast neutron flux is found for a mixture of moderators heavier than hydrogen with the moderator scattering law rigorously accounted for.

32542 (ESTSC/NRC–000102IBMPC00) **SADDE-MOD1: Scaled absorbed dose distribution evaluator.** Reece, W.D. (Pacific Northwest Laboratory, Richland, WA (United States)); Miller, S.D.; Durham, J.S. Battelle Pacific Northwest Lab., Richland, WA (United States). 1 Jan 1989. Sponsored by Nuclear Regulatory Commission, Washington, DC (United States). Office of Nuclear Regulatory Research. Source: ESTSC.

Description: IBM PC; PC-DOS; FORTRAN77; 1 5.25 Diskette.

SADDE generates data files for the VARSKIN code from calculated beta-ray spectra, allowing users to more readily and accurately calculate beta skin dose.

32543 (ESTSC/NRC–000106IBMPC00) **VARSKIN: Dose calculation of contamination of the skin.** Reece, W.D. (Pacific Northwest Lab, Richland, WA (United States)). Battelle Pacific Northwest Lab., Richland, WA (United States). 1 Aug 1987. Sponsored by Nuclear Regulatory Commission, Washington, DC (United States). Office of Nuclear Regulatory Research. Source: ESTSC.

Description: IBM PC; DOS; FORTRAN 77; 1 5.25 Diskette.

VARSKIN computes the radiation dose to the skin from radioactive contamination of the skin. The dose is computed at a specified depth from a source, ranging in size from a point to a disk having a 100-cm squared area.

32544 (ESTSC/NRC–000109IBMPC00) **IRDAM: Interactive rapid dose assessment model.** Poeton, R.W. (Pacific Northwest Lab., Richland, WA (United States)); Moeller, M.P.; Laughlin, G.J.; Desrosiers, A.E. Battelle Pacific Northwest Lab., Richland, WA (United States). 1 May 1983. Sponsored by Nuclear Regulatory Commission, Washington, DC (United States). Office of Nuclear Regulatory Research. Source: ESTSC.

Description: IBM PC; DOS; BASIC; 1 5.25 Diskette.

IRDAM is a micro-computer based program for rapidly assessing the radiological impact of an accident at a nuclear power plant.

32545 (ESTSC/NRC–000125D860000) **SKYSHINEIII: Calculating effects of structure design on neutron dose rates in air.** Lampley, C.M. (Radiation Research Associates, Inc., Fort Worth, TX (United States)); Andrews, C.M.; Wells, M.B. Radiation Research Associates, Inc., Fort Worth, TX (United States). 1 Sep 1988. Sponsored by Nuclear Regulatory Commission, Washington, DC (United States). Office of Nuclear Regulatory Research. Source: ESTSC.

Description: DEC VAX8600; VMS; FORTRAN 77; 1 Mag Tape.

SKYSHINE was designed to aid in the evaluation of the effects of structure geometry on the gamma-ray dose rate at given detector positions outside of a buliding housing gamma-ray sources. The program considers a rectangular structure enclosed by four walls and a roof. Each of the walls and the roof of the building may be subdivided into up to nine different areas, representing different materials or different thicknesses of the same material for those positions of the wall or roof. Basic sets of iron and concrete slab transmission and reflection data for 6.2 MeV gamma-rays are part of the SKYSHINE block data. These data, as well as parametric air transport data for line-beam sources at a number of energies between 0.6 MeV and 6.2 MeV and ranges to 3750 ft, are used to estimate the various components of the gamma-ray dose rate at positions outside of the building. The gamma-ray source is assumed to be a 6.2 MeV point-isotropi source. SKYSHINE-III provides an increase in versatility over the original SKYSHINE code in that it addresses both neutron and gamma-ray point sources. In addition, the emitted radiation may be characterized by an energy emission spectrum defined by the user. A new SKYSHINE data base is also included.

32546 (ESTSC/NRC–000360C660000) **DISPERS: Mathematical models for dispersion of radionuclides.** Codell, R.B. (U.S Nuclear Regulatory Commission, Washington, DC (United States)); Whelan, G.; Key, K.T. Pacific Northwest Lab., Richland, WA (United States). 1 Jun 1982. Sponsored by Nuclear Regulatory Commission, Washington, DC (United States). Office of Nuclear Regulatory Research. (CCC–454). Source: ESTSC.

Description: CDC6600; Machine Dependent; FORTRAN IV, BASIC II; 1 Mag Tape.

DISPERS computes the fate of routinely or accidentally released radionuclides in surface water and groundwater.

32547 (ESTSC/NRC–000360IPS0200) **DISPERS: Mathematical models for dispersion of radionuclides.** Codell, R.B. (US Nuclear Regulatory Commission, Washington, DC (United States)). Nuclear Regulatory Commission, Washington, DC (United States). 1 Jun 1982. Sponsored by Nuclear Regulatory Commission, Washington, DC (United States). Office of Nuclear Regulatory Research. (CCC–454). Source: ESTSC.

Description: IBM PS/2; Machine Dependent; FORTRAN IV, BASIC II; 1 3.5 Diskette.

DISPERS computes the fate of routinely or accidentally released radionuclides in surface water and groundwater.

32548 (ESTSC/NRC–000362DG00000) **METD: Computer code systems to use with meteorological data.** Snell, W. (U.S. Nuclear Regulatory Commission, Washington, DC (United States)). Nuclear Regulatory Commission, Washington, DC (United States). 1 Jul 1982. Sponsored by Nuclear Regulatory Commission, Washington, DC (United States). Office of Nuclear Regulatory Research. (PSR–197). Source: ESTSC.

Description: DATA GENERAL; Machine Dependent; FORTRAN IV; 1 Mag Tape.

The Nuclear Regulatory Commission receives hour by hour meteorological data on magnetic tapes in a specified format. The computer codes in this collection are used by the NRC meteorology staff to examine, assess and utilize these hourly values of meteorological data.

32549 (ESTSC/NRC–000362I303300) **METD: Computer code systems to use with meteorological data.** Snell, W. (U.S. Nuclear Regulatory Commission, Washington, D.C. (United States)). Nuclear Regulatory Commission, Washington, DC (United States). 1 Jul 1982. Sponsored by Nuclear Regulatory Commission, Washington, DC (United States). Office of Nuclear Regulatory Research. (PSR–197). Source: ESTSC.

Description: IBM3033; Machine Dependent; FORTRAN IV; 1 Mag Tape.

The Nuclear Regulatory Commission receives hour by hour meteorological data on magnetic tapes in a specified format. The computer codes in this collection are used by the NRC meteorology staff to examine, assess and utilize these hourly values of meteorological data.

32550 (FASAC-TAR–92019706) **Non-US artificial neural network research: FASAC special study.** Davidson, R.B. Science Applications International Corp., McLean, VA (United States). Foreign Applied Sciences Assessment Center. Oct 1991. 92p. Source: OSTI; Science Applications International Corp., 1710 Goodridge Drive, P.O. Box 1303, McLean, VA 22102.

This assessment was undertaken to examine for US Government research and development sponsors (and for Government policy-makers and analysts who must be aware of foreign scientific and technological capabilities) the recent range, quality, and accomplishments of non-US artificial neural network research and development activities. It records the project's initial assessments of major artificial neural network research and development activities in Western Europe, Japan, and the Soviet Union, where the largest, most organized efforts are proceeding or where potential military applications are of interest to US policy-makers. We plan to issue updated versions of this report periodically, as more research and development activities (in more places) are examined and as the efforts assessed in this report succeed or fail. This report focuses on artificial neural networks as an information processing technology, the goal of which is design and production of powerful computers for appropriate applications.

32551 (JAERI-M–92-012, pp. 329-345) **Validation of IMPAIR 2 code using ACE-test results from the Radioiodine Test Facility (RTF).** Furrer, M. (Paul Scherrer Inst. (PSI), Villigen (Switzerland)); Cripps, R.C. Japan Atomic Energy Research Inst., Tokyo (Japan). Mar 1992. (CONF-9109373–: 3. CSNI workshop on iodine chemistry in reactor safety, Tokai (Japan), 11-13 Sep 1991). In *Proceedings of the third CSNI workshop on iodine chemistry in reactor safety.* 532p. Order Number DE92514925. Source: OSTI; NTIS; INIS.

The IMPAIR 2 (Iodine Matter Partitioning And Iodine Retention) code is based essentially on clean-condition data. Since the original version was published (1989), improvements are made with the aim to attempt a sufficiently realistic description of postulated iodine chemical conditions prevalent after a hypothetical severe accident in containment using a minimum of differential equations which define the important iodine reactions. This code considers 6 iodine species in 21 differential equations. It also contains code to model relevant physico-chemical behaviour: transport from containment (time-dependent accidental leakage or intentional filtered venting simulation), droplet carry-over, liquid and gas phase deposition (on paint surfaces) and revolatilization (including surface-formed organic iodine), aerosol phase transfer and droplet precipitation. The ACE/RTF Test are one of the most important sources for accident relevant conditions. An examination of the thermodynamic parameters of ACE/RTF Test 1 led to the addition of the Higher Molecular Weight organic Iodides (HMWI). The radiolysis reactions, especially the pH-dependent iodine oxidation and iodate reduction reactions, are revised using data from the RTF Tests and other current literature. (author).

32552 (JINR-E–11-91-353) **Computation of Green function of the Schroedinger-like partial differential equations by the numerical functional integration.** Lobanov, Yu.Yu.; Shahbagian, R.R.; Zhidkov, E.P. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Computing Techniques and Automation. 1991. 26p. Order Number DE92644651. Source: OSTI; NTIS (US Sales Only); INIS.

A new method for numerical solution of the boundary problem for Schroedinger-like partial differential equations in R^n is elaborated. The method is based on representation of multidimensional Green function in the form of multiple functional integral and on the use of approximation formulas which are constructed for such integrals. The convergence of approximations to the exact value is proved, the remainder of the formulas is estimated. Method reduces the initial differential problem to quadratures. 16 refs.; 7 tabs.

32553 (JINR-R–11-90-501) **Algorithm and program for solution of the Sturm-Liouville problem using the high order accuracy spline scheme.** Zhanlav, T.; Puzynin, I.V.; Smirnov, Yu.S. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Computing Techniques and Automation. 1990. 14p. (In Russian). Order Number DE92644652. Source: OSTI; NTIS (US Sales Only); INIS.

Algorithm and program for solution of the Sturm-Liouville problem for the second order linear homogeneous differential equation with homogeneous boundary conditions is presented. The algorithm is based on the four order accuracy spline-approximation method with using an equidistant step net for an independent variable. A generalized iteration Newton scheme with an inclusion function allowing to inverse a simple three-point operator at each iteration is used for the solution of the obtained non-linear five-point equation. The write-up of the program EVSA4 realising this algorithm and its parameters is presented. 19 refs.; 1 fig.; 5 tabs.

32554 (KCP–613-4972) **Design of a PCM data compressor: Final report.** Navickas, T.A. Allied-Signal Aerospace Co., Kansas City, MO (United States). Kansas City Div. Aug 1992. 73p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DP00613. Order Number DE92019469. Source: OSTI; NTIS; GPO Dep.

Development of automated test equipment for an advanced telemetry system requires continuous monitoring of PCM data while exercising telemetry inputs. This requirements leads to a large amount of data that needs to be stored and later analyzed. For example, a data stream of 4 Mb/s and a test time of 30 min. would yield 900 Mb of raw data. Information must be stored to correlate the raw data to the test stimulus. This leads to a total of 1.8 Gb of data to be stored and analyzed. There is no method to analyze this amount of data in a reasonable time. A data compression method is needed to reduce the amount of data collected to a reasonable amount The solution to the problem was data reduction. Data reduction was accomplished by real time limit checking, time stamping, and smart software. Limit checking was accomplished by an eight-state finite-state machine and four compression algorithms. Time stamping was needed to correlate stimulus to the appropriate output for data reconstruction. The software was written in the C programming language with a DOS extender used to allow it to run in extended mode. A 94–98% compression in the amount of data gathered was accomplished using this method.

32555 (LA–12341-M) **GNETS: Graphical Network Security system user guide.** Stoltz, L.A. Los Alamos National Lab., NM (United States). Aug 1992. 85p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. Order Number DE92019707. Source: OSTI; NTIS (US Sales Only); GPO Dep.

The GNETS system provides a means of evaluating the security of a computer network operating under DOE guidelines found, which in turn references other security documents. It is a PC-based system developed to be used by system security personnel to check the security of existing networks, to evaluate the security of proposed networks, and to increase the capability to conduct additional research on networked systems. GNETS allows the user to "build" a computer network graphically. As machines are added to the network, the intelligent graphical interface prompts the user for relevant machine characteristics and security information. As the computer network is created and depicted, a dynamic analysis process inspects the security of the network and warns the user of any security risks. The user can save the network that has been constructed and return to it later to review or modify it. The system is implemented in Zortech C++ for 286 PCs (and compatible microcomputers) with 550K RAM and a graphics display adaptor.

32556 (LA-UR–92-1463) **The performance realities of massively parallel processors: A case study.** Lubeck, O.M.; Simmons, M.L.; Wasserman, H.J. Los Alamos National Lab., NM (United States). [1992]. 14p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-921125–4: ACM/IEEE supercomputing conference, Minneapolis, MN (United States), 14-21 Nov 1992). Order Number DE92015211. Source: OSTI; NTIS; GPO Dep.

This paper presents the results of an architectural comparison of SIMD massive parallelism, as implemented in the Thinking Machines Corp. CM-2 computer, and vector or concurrent-vector processing, as implemented in the Cray Research Inc. Y-MP/8. The comparison is based primarily upon three application codes that represent Los Alamos production computing. Tests were run by porting optimized CM Fortran codes to the Y-MP, so that the same level of optimization was obtained on both machines. The results for fully-configured systems, using measured data rather than scaled data from smaller configurations, show that the Y-MP/8 is faster than the 64k CM-2 for all three codes. A simple model that accounts for the relative characteristic computational speeds of the two machines, and reduction in overall CM-2 performance due to communication or SIMD conditional execution, is included. The model predicts the performance of two codes well, but fails for the third code, because the proportion of communications in this code is very high. Other factors, such as memory bandwidth and compiler effects, are also discussed. Finally, the paper attempts to show the equivalence of the CM-2 and Y-MP programming models, and also comments on selected future massively parallel processor designs.

32557 (LA-UR–92-2580) **HIPPI and Fibre Channel.** Tolmie, D.E. Los Alamos National Lab., NM (United States). [1992]. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-920966–1: 10. conference on computing in high energy physics, Annecy (France), 21-25 Sep 1992). Order Number DE92040346. Source: OSTI; NTIS; INIS; GPO Dep.

The High-Performance Parallel Interface (HIPPI) and Fibre Channel are near-gigabit per second data communications interfaces being developed in ANSI standards Task Group X3T9.3. HIPPI is the current interface of choice in the high-end and supercomputer arena, and Fibre Channel is a follow-on effort. HIPPI came from a local area network background, and Fibre Channel came from a mainframe to peripheral interface background.

32558 (ORNL/TM–11900) **Speedup properties of phases in the execution profile of distributed parallel programs.** Carlson, B.M. (Toronto Univ., ON (Canada). Computer Systems Research Institute); Wagner, T.D.; Dowdy, L.W.; Worley, P.H. Oak Ridge National Lab., TN (United States). Aug 1992. 25p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE92019301. Source: OSTI; NTIS; GPO Dep.

The execution profile of a distributed-memory parallel program specifies the number of busy processors as a function of time. Periods of homogeneous processor utilization are manifested in many execution profiles. These periods can usually be correlated with the algorithms implemented in the underlying parallel code. Three families of methods for smoothing execution profile data are presented. These approaches simplify the problem of detecting end points of periods of homogeneous utilization. These periods, called phases, are then examined in isolation, and their speedup characteristics are explored. A specific workload executed on an Intel iPSC/860 is used for validation of the techniques described.

32559 (ORNL/TM–12147) **Standards for message-passing in a distributed memory environment.** Walker, D.W. Oak Ridge National Lab., TN (United States). Aug 1992. 25p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. (CONF-9204185–Summ.: 1. Center for Research on Parallel Computing (CRPC) workshop on standards for message passing in a distributed memory environment, Williamsburg, VA (United States), 29-30 Apr 1992). Order Number DE92019391. Source: OSTI; NTIS; GPO Dep.

This report presents a summary of the main ideas presented at the First CRPC Work-shop on Standards for Message Passing in a Distributed Memory Environment, held April 29-30, 1992, in Williamsburg, Virginia. This workshop attracted 68 attendees including representative from major hardware and software vendors, and was the first in a series of workshops sponsored by the Center for Research on Parallel Computation. The aim of this series of workshops is to develop and implement a standard for message passing on distributed memory concurrent computers, thereby making it easier to develop efficient, portable application codes for such machines. The report discusses the main issues raised in the CRPC workshop, and describes proposed desirable features of a message passing standard for distributed memory environments.

32560 (OUP–92-19) **A simple algorithm for large, nonlinear or singular least squares problems.** Myrheim, J. (NTH, Inst. for Fysikk, Trondheim (Norway)); Rue, H.; Bugge, L. Oslo Univ. (Norway). Fysisk Inst. Jun 1992. 10p. Order Number DE93602464. Source: OSTI; NTIS; INIS.

The authors describe how to use the conjugate gradient method with Jacobi pre-conditioning for solving linear or moderately nonlinear least squares problems. The algorithm is suitable for large but sparse problems, and it works even if the problem is ill-conditioned or singular. 4 refs., 3 tabs.

32561 (RFP–4614) **RFEDSCHK User's Manual (The RFEDS Lab Data Check routine), Environmental and Scientific Systems Information Resources: Version 1.00.** EG and G Rocky Flats, Inc., Golden, CO (United States). Rocky Flats Plant. May 1992. 19p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC34-90DP62349. Order Number DE92019357. Source: OSTI; NTIS; GPO Dep.

The RFEDS Laboratory Data Check routine (RFEDSCHK) performs checks of the off-site laboratory data to identify missing and/or incorrect data which may exist. The check routine is designed to assist the laboratories to correct deficiencies contained in the data before it is sent to the Rocky Flats Environmental Management Department, there-by improving the quality of the data being placed in RFEDS. If the data passes the checks with no errors, the data will be acceptable for placement into RFEDS and delivery of the electronic data to EG&G is appropriate. If errors are detected, the laboratory should correct the errors and perform the check again until the data is free of errors.

32562 (SAND-91-2907C) **RHALE: A MMALE shock physics code written in C++.** Budge, K.G.; Peery, J.S. Sandia National Labs., Albuquerque, NM (United States). [1991]. 19p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DP00789. (CONF-921162-5: Hypervelocity impact symposium, Austin, TX (United States), 17-20 Nov 1992). Order Number DE92018271. Source: OSTI; NTIS; GPO Dep.

This paper describes RHALE, a multi-material arbitrary Lagrangian-Eulerian (MMALE) shock physics code. RHALE is the successor to CTH, Sandia's 3-D Eulerian shock physics code, and will be capable of solving problems that CTH cannot adequately address. We discuss the new Lagrangian capabilities of HALE, which include arbitrary mesh connectivity, superior artificial viscosity, and improved equations of state. We also discuss some of the issues we have encountered in the choice of an axisymmetric element technology and our resolution of these issues. We discuss the MALE algorithms that have been extended for arbitrary grids in both two and three dimensions and present the results of calculations that are of interest to the hypervelocity impact community. The MALE addition to HALE provides the accuracy of a Lagrangian code while allowing a calculation to proceed under very large distortions. Coupling an arbitrary quadrilateral or hexahedral grid to the MALE solution facilitates modeling of complex shapes with a minimum number of computational cells. HALE allows regions of a problem to be modeled with Lagrangian, Eulerian or ALE meshes. In addition, regions can switch from Lagrangian to ALE to Eulerian based on user input or mesh distortion. For ALE meshes, new node locations are determined with equipotential schemes. Element quantities are advected with donor, van Leer, or Super-B algorithms. Nodal quantities are advected with the second order SHALE or HIS algorithms. To facilitate the development of such a lengthy code, we choose to write in the C++ programming language. We feel that object-oriented programming techniques are superior to conventional programming techniques. However, we discuss a few of the efficiency problems we have encountered using these techniques and how we have addressed these problems.

32563 (SAND-92-1655C) **Optimization of expressions involving array classes.** Budge, K.G. Sandia National Labs., Albuquerque, NM (United States). [1992]. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DP00789. (CONF-9207136-1: American National Standards Institute (ANSI) X3J16/ISO WG21 meeting, Toronto (Canada), 12-18 Jul 1992). Order Number DE92019421. Source: OSTI; NTIS; GPO Dep.

C++ is rapidly gaining in popularity as a scientific programming language. The data encapsulation inherent in the class concept and the availability of operator overloading for compact representation of operations make it an ideal language for translating concepts in mathematical physics into computer code. Furthermore, its strong type checking and memory management features facilitate correct coding of algorithms. Unfortunately, C++ code which is written in the true spirit of the language is often very inefficient under current compiler implementations. Many of the inefficiency issues, such as unnecessary copy operations or proliferation of temporaries, have been well-characterized. Some may be alleviated by clever C++ coding, but others cannot be alleviated except by writing C-like code that sacrifices one or more of the best features of the language. This document describes a major source of efficiency problems in expressions using overloaded operators on array classes, and proposes certain minor modifications to the C++ language standard which will facilitate optimization of these expressions.

32564 (SAND-92-8515C) **TCP performance analysis for wide area networks.** Chen, H.Y.; Hutchins, J.A.; Testi, N. Sandia National Labs., Livermore, CA (United States). [1992]. 19p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DR00789. (CONF-921125-3: ACM/IEEE supercomputing conference, Minneapolis, MN (United States), 14-21 Nov 1992). Order Number DE92013565. Source: OSTI; NTIS; GPO Dep.

Even though networks have been getting faster, perceived throughput at the application level has not increased accordingly. In an attempt to identify many of the performance bottlenecks, we collected and analyzed data over a wide area network (WAN) at T3 (45 Mbps) bandwidth. The information gained will assist in designing new protocols and/or algorithms that are consistent with future high-speed requirements.

32565 (UCRL-JC-106562) **Construction of large-scale simulation codes using ALPAL: Generation of a hydrodynamics code module.** Cook, G.O. Jr.; Painter, J.F. Lawrence Livermore National Lab., CA (United States). Jan 1992. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-910771-5: 13. IMACS world congress on computation and applied mathematics, Dublin (Ireland), 22-26 Jul 1991). Order Number DE92019601. Source: OSTI; NTIS; GPO Dep.

A Livermore Physics Applications Language (ALPAL) is a tool that automatically generates code to solve nonlinear integro-differential equations, given a very high-level specification of the equations to be solved and the numerical methods to be used. ALPAL is designed to handle the sort of complicated mathematical models used in very large scientific and engineering simulation codes. Other features of ALPAL include an interactive graphical front end, the ability to symbolically compute exact Jacobians for implicit methods, and a high degree of optimization in generated code. Here we show how ALPAL is used in practice by using it to construct a simple one-dimensional hydrodynamics code.

32566 (UCRL-JC-110011) **Distributed make (and more).** Fletcher, J.G. Lawrence Livermore National Lab., CA (United States). Mar 1992. 16p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-921125-2: ACM/IEEE supercomputing conference, Minneapolis, MN (United States), 14-21 Nov 1992). Order Number DE92011972. Source: OSTI; NTIS; GPO Dep.

An infrastructure for general distributed programming among Unix systems has been implemented that is sufficient to permit the convenient distribution of both user-programmed applications and standard utilities, such as make. That is, make executed on one computer can cause programs to be run on other computers and determine their exit statuses. Although privacy is maintained, the user is not asked to supply his password and therefore need not remain attendant at this terminal. Installation of the infrastructure does not require "superuser" or other privilege.

32567 (UCRL-JC-111089) **Dynamic multimodal function optimization using genetic algorithms.** Cedeno, W. (Lawrence Livermore National Lab., CA (United States)); Vemuri, V. Lawrence Livermore National Lab., CA (United States). 20 Jul 1992. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9208118-1: 18. conference Latin American of information, Las Palmas de Gran (Spain), 31 Aug - 4 sep 1992). Order Number DE92019602. Source: OSTI; NTIS; GPO Dep.

Many optimization techniques work well for unimodal functions. If applied to multimodal functions, they tend to converge to only one of the many peaks. Optimization of multimodal functions becomes even more difficult if the function parameters change dynamically. Genetic algorithms have been successfully applied by several investigators for static optimization of multimodal functions. This modest success is primarily due to the ability of genetic algorithms to locate more than one peak. In this paper we introduce a combination of selection and replacement operators that is suitable for multimodal function optimization in a dynamic environment using various test functions, performance of this new operator is studied. Utility of this new operator to multimodal function optimization in a dynamic environment is described.

32568 (WSRC-IM-90-83-6-Rev.) **Reviews of computing technology: Fiber distributed data interface: Revision.** Johnson, A.J. Westinghouse Savannah River Co., Aiken, SC (United States). 1 Apr 1992. 36p. Sponsored by USDOE, Washington, DC

(United States). DOE Contract AC09-89SR18035. Order Number DE92019927. Source: OSTI; NTIS; GPO Dep.

This technology report describes Fiber Distributed Data Interface (FDDI) as a technology, looks at the applications of this technology, examines the current economics of using it, and describe activities and plans by the Information Resource Management Department to implement this technology at the Savannah River Site.

32569 (WSRC-IM-92-23) **Savannah River Site computing standards and guidelines reference.** Westinghouse Savannah River Co., Aiken, SC (United States). 1 Apr 1992. 110p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC09-89SR18035. Order Number DE92019347. Source: OSTI; NTIS; GPO Dep.

It is WSRC policy that site computing activities be based on standards. The primary reasons for defining the site's computing standards and guidelines are to promote interoperability of site computing systems and to facilitate the portability of programs, applications, and data between computer systems. This policy is necessary to obtain increased flexibility and cost effectiveness in carrying out the site mission. This report includes the following groups of computer technology standards: Operating Systems Services Technology; User Interfaces Services Technology; Program Services Technology; Data Management Services Technology; Data Interchange Services Technology; Graphics Services technology; Network Services Technology; and Hardware Interfaces Technology.

32570 (Y/CSD/INF-92/8) **Functional system design document for the Intelligent Inspection System (IIS).** Oak Ridge Y-12 Plant, TN (United States). 21 Jan 1992. 106p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OS21400. Order Number DE92018240. Source: OSTI; NTIS; GPO Dep.

IIS (Intelligent Inspection system) is a martin Marietta Energy Systems Quality Services division project to design and implement a new generation inspection workstation/machine system to be used on all new and upgraded inspection machines for the next several years. The initial implementation will be on upgraded YZ inspection machines. These machines now utilize the dual processor (PDP-II/Allen Bradley combination) hardware and software. Portions of the hardware for these current systems are no longer available. Future implementations will include dual YZ, CMM and OMM systems, both upgrades and new. IIS project scope includes all of the inspection machine control hardware and software, all software to receive a part program, collect inspection data, analyze the data, output results, and the operator interface. Also included in the IIS scope are the operator interface and electronic data handling for the part programming interface and the shop floor interface.

32571 (ANL/CP-76315) **Evolution of the scientific paper.** Harmon, J.E. Argonne National Lab., IL (United States). [1992]. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-9209142-6: Institute of Electrical and Electronics Engineers (IEEE) international professional communications conference (IPCC): crossing frontiers, Santa Fe, NM (United States), 30 Sep 1992). Order Number DE92019696. Source: OSTI; NTIS; GPO Dep.

The first papers reporting original research results in technical periodicals and proceedings appeared in the late 17th century. Since that time, the typical scientific paper has evolved from a fairly simple document, accessible to a general audience, to a much more complex one, aimed at a specialized audience. The purpose of this article is to give an overview of what the first scientific papers were like and how they evolved to their present form and style. To facilitate this discussion, the scientific paper's development has arbitrarily been divided into four stages: the origin and formative years of the scientific paper (1665-1765), emergence of scientific papers written for specialized publications (1765-1865), development of the modem scientific paper (1865-1965), and hyperspecialization and computerization of the modem scientific paper (1965-?).

32572 (ANL/CP-76725) **Increasing the end user's productivity through seamless integration of applications with the database.** Parizadeh, K. Argonne National Lab., IL (United States). [1992]. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-9209160-3: International symposium on energy, environment and information management, Argonne, IL (United States), 15-18 Sep 1992). Order Number DE92019599. Source: OSTI; NTIS; GPO Dep.

End user's productivity is a critical issue in modem day offices. The first section of this paper will present some guidelines and methods to improve end user's productivity. The second section, presents an actual system.

32573 (ETDE/JP-mf-92562517, pp. 51-63) **Analysis and evaluation of information network system.** Nishi, Y. (Geological Survey of Japan, Tsukuba (Japan)). Geological Survey of Japan, Tsukuba, Ibaraki (Japan). Jan 1992. 133p. (In Japanese). In *Analysis and evaluation of data from the nationwide survey of geothermal exploration.* Order Number DE92562517. Source: OSTI; NTIS (US Sales Only).

In this report, the computer network system including geothermal resources information, which joints New Energy and Industrial Technology Development Organization (NEDO) and Geological Survey of Japan (GSJ), has been analyzed and evaluated on the basis of results obtained up to date. The network jointing NEDO and GSJ has been realized by combining uucp (unix unix copy) function normally attached to UNIX-OS, public line, and high performance modem. In addition, it was confirmed that data files can be successfully transferred using the high-speed modem through this network as the network using public line. However, the data with a large capacity of more than several tens mega-byte were not so well transfered via this network. Accordingly, it was pointed out that the support of functions except the file transfer would be important. 5 refs., 6 figs.,1 tab.

32574 (JAERI-M-92-012, pp. 381-395) **Modelling of iodine chemistry: The LIRIC database.** Wren, J.C. (Atomic Energy of Canada Ltd., Pinawa, MB (Canada). Whiteshell Nuclear Research Establishment); Sagert, N.H.; Sims, H.E. Japan Atomic Energy Research Inst., Tokyo (Japan). Mar 1992. (CONF-9109373-: 3. CSNI workshop on iodine chemistry in reactor safety, Tokai (Japan), 11-13 Sep 1991). In *Proceedings of the third CSNI workshop on iodine chemistry in reactor safety.* 532p. Order Number DE92514925. Source: OSTI; NTIS; INIS.

The LIRIC (Library of Iodine Reactions in Containment) database was developed to provide a better understanding of the behaviour of iodine under conditions relevant to reactor accidents through mechanistic modelling. It has undergone significant changes since it was first presented at the last CSNI workshop on iodine chemistry and now includes better reaction kinetic data for various thermal and radiolysis iodine reactions, a revised mass transfer model and a new reaction set, which addresses some of the recent Radioiodine Test Facility (RTF) test results. This paper describes tests of the validity of some of the LIRIC reaction schemes and highlights where sensitivities are. The reaction set for water radiolysis seems satisfactory. The paper then discusses several important reactions of iodine species with hydrogen peroxide and, by modelling results from RTF experiments, suggests a plausible reaction model and range of rate constants. However, these reactions are not really understood sufficiently for mechanistic modelling purposes. Finally, the paper describes a crude reaction scheme for organic radiolysis reactions that has been added to test the possible effect of organic oxidation reactions on the pH, dissolved oxygen and iodine volatility. This reaction scheme also requires much more work before it is sufficiently well established for mechanistic modelling. (author).

32575 (K/CSD/TM-101) **Engineering Design Information System (EDIS) Information Services Division (ISD) Index Function: User's manual.** Schwarz, R.K. (ed.); Walker, C.T.; Cline, B.E.; Lucas, C.L. Oak Ridge K-25 Site, TN (United States). Aug 1992. 77p. Sponsored by USDOE, Washington, DC (United

States). DOE Contract AC05-84OT21400. Order Number DE92041242. Source: OSTI; NTIS; GPO Dep.

The Engineering Design Information System (EDIS) Information Services Division (ISD) Index Function is an interactive system developed for ISD personnel to perform indexing, maintenance, and retrieval of information about engineering documents. Section 2.0 of this manual gives an overview of the system structure, data, and functionality, as well as the hardware and security environment within which the system operates. Section 3.0 gives a detailed description of the interactive menus, screens, and prompts that provide access to the system functions and the requirements for data entry. Appendixes A-F are included to display data definitions, modification rules, help screen formats, explanation of system help and informational messages, code translations, and a report format.

32576 (ORNL/ER/Sub–87-99053/50) **Data Base Management Plan for the remedial investigation of Waste Area Grouping 5 at Oak Ridge National Laboratory, Oak Ridge, Tennessee.** Oak Ridge National Lab., TN (United States); Bechtel National, Inc., Oak Ridge, TN (United States). Jul 1992. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE92019492. Source: OSTI; NTIS; INIS; GPO Dep.

The remedial investigation (RI) for Waste Area Grouping (WAG) 5 will involve gathering, verifying, analyzing, reporting, and archiving numerous types of field and analytical data. Field investigations will produce data documenting surficial and geophysical surveys, geologic and hydrogeologic logs, aquifer tests, water level measurements, geophysical logs, and stream and seepage flow measurements. Laboratory analyses will be performed on soil, surface water, groundwater, and sediment samples collected during field investigations. All data resulting from these activities will be contained in the Bechtel RI/feasibility study (FS) project data base and will be managed in accordance with the RI/FS Data Base Management Plan and this WAG-specific plan. This Data Base Management Plan describes the gathering, verifying, analyzing, reporting, and archiving of data generated during Bechtel's remedial investigation of Waste Area Grouping 5. This investigation will produce data documenting surficial surveys, geophysical surveys, geologic and hydrologic logs, aquifer tests, water level measurements, geophysical logs, and stream and seep flow measurements. Also, laboratory analyses will be performed on soil, surface water, groundwater, and sediment samples. The 1500 series of Bechtel project procedures, "Data Base Management," and the project Data Base Management Plan will be used to ensure that data are handled properly.

Corporate Author Index

This index lists the corporate authors responsible for issuing the documents in this publication which are identified primarily by report number. The corporate names are entered in standardized forms as defined in ETDE/PUB-3, *International Energy: Research Organizations 1986–1990.* Each entry under a corporate name includes the document title and citation number. Three items of information may appear in parentheses: (1) an abbreviation to identify the document type, such as a report; (2) the country of publication, indicated by International Organization for Standardization (ISO) country code; and (3) the language of the document if non-English (R;CA;In French). Author affiliations are not listed in this index.

Proceedings of the second international chromosome 22 workshop, 17:31767 (R;US)

China Nuclear Information Centre, Beijing, BJ (China)

α-sealed transfer device and portable plastic film sealers, 17:31349 (R;CN;In Chinese)
A method of using γ-ray spectrum of ^{40}K to detect firecrackers, 17:30785 (R;CN;In Chinese)
A new corrosion testing facility with heat flux caused surface boiling conditions, 17:31212 (R;CN;In Chinese)
A nondestructive testing device for determining ^{235}U enrichment in power reactor fuel elements, 17:30951 (R;CN;In Chinese)
A probabilistic safety assessment of in-pile test loop in HWRR, 17:30867 (R;CN)
A revolving irradiation stage, 17:31350 (R;CN;In Chinese)
A search for neutrinoless double beta decay of ^{48}Ca, 17:32241 (R;CN;In Chinese)
A study on ^{90}Sr adsorption by the soils around Qinshan and Daya Bay nuclear power plants, 17:31690 (R;CN;In Chinese)
A whole reactor model hydraulic test for Qinshan nuclear power plant, 17:30884 (R;CN;In Chinese)
An elevator for cobalt-60 source, 17:30784 (R;CN;In Chinese)
An experimental investigation on turbulent flow through symmetric wall-subchannels of rod bundles, 17:31378 (R;CN;In Chinese)
An experimental study of bubble detachment point in subcooled boiling at low pressure and velocity, 17:31381 (R;CN;In Chinese)
Analysis and evaluation of the in-pile irradiation test of the fuel element for Qinshan Nuclear Power Plant, 17:30882 (R;CN;In Chinese)
Analysis of cracks and fractography on steam generator tubes, 17:30890 (R;CN;In Chinese)

China Nuclear Information Centre, Beijing, BJ (China)

Autoradiographic visualization on the role of central ^{3}H-5-hydroxytryptamine in acupuncture analgesia, 17:31854 (R;CN;In Chinese, English)

Characteristic of the flux pinning at intergrain boundaries in bulk Bi-Pb-Sr-Ca-Cu-O superconductors, 17:32385 (R;CN)

Characteristics of low-q discharge on HT-6B tokamak, 17:32399 (R;CN;In Chinese)

Communication of nuclear data progress: No.4(1990), 17:32204 (R;CN)

Comprehensive research on sealing behaviour of reactor vessel of 300 MWe nuclear power plant, 17:30880 (R;CN;In Chinese)

Conceptual design of fixed bed burning system: A study of the head-end process for Th-U nuclear fuel cycle in HTGR, 17:30639 (R;CN;In Chinese)

Data acquisition and processing system for coincidence measurements, 17:31545 (R;CN;In Chinese)

Determination of plutonium in environmental water, 17:31292 (R;CN;In Chinese)

Development and research of in-core transducers at IAE (Institute of Atomic Energy), 17:31606 (R;CN;In Chinese)

Development for specific heat measuring apparatus of high T_c superconductor in $80 \approx 200$ K temperature range, 17:32383 (R;CN;In Chinese)

Development of ^{60}Co after-loading source, 17:30786 (R;CN;In Chinese)

Development of a ^{60}Co radioactive rod source used for γ-ray level gauge, 17:30787 (R;CN;In Chinese)

Development of radiation preservation technique in Beijing, 17:31856 (R;CN)

Distribution of natural uranium in Jiuquan ecological environment, 17:31689 (R;CN;In Chinese)

Economic benefits of increased discharge burnup for PWR: Prospect of increasing discharge burnup for Daya Bay NPP and Qinshan NPP1, 17:30924 (R;CN)

Effect of ^{60}Co radiation on the fibrinolysis and anticoagulation of endothelial cells, 17:31868 (R;CN;In Chinese)

Effects of ^{60}Co γ-ray irradiation on human platelets, 17:31871 (R;CN;In Chinese)

Effects of irradiation on normal human lymphocytes, 17:31872 (R;CN;In Chinese)

Environmental and agricultural impacts of the Chernobyl NPP accident on the countries of the northern hemisphere, 17:31867 (R;CN;In Chinese)

Excitation adjustable system of toroidal field waveform for tokamak HL-1, 17:32397 (R;CN;In Chinese)

Expansive-graphite-sandwiched spiral-wound stainless steel gasket applied to manhole sealing joints of nuclear equipment, 17:31267 (R;CN;In Chinese)

Experimental research on flow resistance in piping components under natural circulation condition, 17:31379 (R;CN;In Chinese)

Experimental study on critical heat flux with long rod bundle, 17:30886 (R;CN;In Chinese)

Flux creep in fluorine-doping Bi-Pb-Sr-Ca-Cu-O bulk superconductor, 17:32384 (R;CN;In Chinese)

Hard X-ray measurement on HT-6B tokamak, 17:32400 (R;CN;In Chinese)

Improved thomas formula for radon measurement, 17:31644 (R;CN;In Chinese)

Improving the properties of stainless steel electron-beam welds by laser treatment, 17:31213 (R;CN;In Chinese)

Investigation of the neutron diffraction anomaly and electrical behaviour of α-LiIO$_3$ single crystal under AC field, 17:31266 (R;CN;In Chinese)

Investigation on subcold boiling-induced hydrodynamic instability in a natural circulation system, 17:31380 (R;CN;In Chinese)

Irradiation surveillant test of High Flux Engineering Test Reactor (HFETR) pressure vessel, 17:30972 (R;CN;In Chinese)

Irradiation test of borosilicate glass burnable poison, 17:30889 (R;CN;In Chinese)

Leaching process of nuclear fuel in leaching solution at sub-boiling temperature, 17:30638 (R;CN;In Chinese)

Level 1 probabilistic safety assessment on swimming pool reactor at IAE, 17:30971 (R;CN)

Machining technology for spider of control assembly, 17:30954 (R;CN;In Chinese)

Macro-and micro-autoradiographic study in comparison with the incorporation of ^{35}S-methionine by various tissue protein in organism, 17:31857 (R;CN;In Chinese)

Manufacturing technology of top nozzle and bottom nozzle in fuel assembly for nuclear power plant, 17:30883 (R;CN;In Chinese)

Model SM-1 ballast density gauge, 17:30783 (R;CN;In Chinese)

Modulate function and effect of ^{60}Co γ-rays on ConA-induced CD_4^+ and CD_8^+ subpopulations of lymphocytes, 17:31874 (R;CN;In Chinese)

Mutagenic effects induced by accumulating rare earths nuclides with different ionic radius in fission fragments, 17:31877 (R;CN;In Chinese)

Neutron irradiation test of the S271 steel, 17:31214 (R;CN;In Chinese)

Nondestructive testing of bonding of low enriched uranium elements by using ultrasonic phase-amplitude technique, 17:30952 (R;CN)

Nuclear safety legislation and supervision in China, 17:30918 (R;CN)

Numerical research of multiple integral, 17:32508 (R;CN;In Chinese)

Numerical simulation for HT-6M tokamak electrical transient behaviours, 17:32447 (R;CN)

Observation of spatial resolution of ECR plasma on the MM-2 magnetic mirror, 17:32401 (R;CN;In Chinese)

One and three dimensional numerical simulation of millimeter wave fel amplifiers with rectangular waveguide, 17:31483 (R;CN;In Chinese)

Placental and milk transfer as well as distribution of ^{147}Pm in mouse, 17:31870 (R;CN;In Chinese)

Preparation of rT$_3$ in human serum ria kit, 17:31329 (R;CN;In Chinese)

Preparation of uranium dioxide powder: Process for production coarse particle ADU precipitate in pilot plant, 17:30634 (R;CN;In Chinese)

Preparation of Y-Ba-Cu-O superconducting film above liquid nitrogen temperature, 17:32386 (R;CN;In Chinese)

Radiation monitor system for nuclear power plants, 17:30955 (R;CN;In Chinese)

Radioimmunoassay for platelet activation specific protein GMP-140 on the platelet surface and in plasma, 17:31858 (R;CN;In Chinese)

Radiological environmental quality assessment of the nuclear industry in China over the past 30 years, 17:30964 (R;CN;In Chinese)

Relativistic cloud-in-cell simulation of free-electron laser (FEL) with considering space charge effects, 17:31482 (R;CN;In Chinese)

Skyrmions of different types, 17:32130 (R;CN;In Chinese)

Space nonweaponization. An urgent task for arms control, 17:31191 (R;CN;In Chinese)

Spatial filtring and thermocouple spatial filter, 17:31605 (R;CN;In Chinese)

Study of electron-beam-pumped KrF laser kinetics and calculation of energy deposition, 17:32048 (R;CN;In Chinese)

Study on the ^{90}Sr absorption by agricultural plants grown in soil from Daya Bay and Qinshan area, 17:31875 (R;CN;In Chinese)

Study on the dose models of ^{147}Pm in tissues of mouse, 17:31869 (R;CN;In Chinese)

Study on the early and late mutants of radiation induced rice, 17:31855 (R;CN;In Chinese)

Study on the focal-plane detector system for medium heavy ions, 17:31546 (R;CN;In Chinese)

Study on the retention of enriched UO$_2$F$_2$ in the mouse and its radiogenotoxicological effects, 17:31876 (R;CN;In Chinese)

The anomalous transport caused by magnetic perturbation in tokamak, 17:32446 (R;CN)

The calculations of magnetic diffusion constant and Kolmogorov entropy in a stochastic field region, 17:32396 (R;CN;In Chinese)

The development and improvement of a fault tree program, 17:32507 (R;CN;In Chinese)

The development of computer codes for NPP fuel behavior analysis at IAE, 17:32506 (R;CN;In Chinese)

The dynamic response of the containment of the Qinshan nuclear power plant to the aircraft impact loading, 17:30888 (R;CN;In Chinese)

The effects of ^{60}Co γ-ray irradiation on the cytoskeleton of mouse peritoneal macrophages and human peripheral blood monocytes in vitro, 17:31873 (R;CN;In Chinese)

The experimental determination of the primary system resistance for 5MW heating test reactor, 17:30970 (R;CN;In Chinese)

The in-pile proving test for fuel assembly of Qinshan nuclear power plant, 17:30881 (R;CN;In Chinese)

The model and optimization of HTGR nuclear fuel cycle: Pt. 2: Multi-reactor model, 17:30922 (R;CN;In Chinese)

The model and optimization of HTGR nuclear fuel cycle: Pt. 1: Mono-reactor model, 17:30923 (R;CN;In Chinese)

The research on the measuring method and equipment of fast neutron absorption dosimetry and international intercomparison, 17:31544 (R;CN;In Chinese)

The research progress on plant mutant germplasm resources in China, 17:31859 (R;CN;In Chinese)

The suppression of multiple tearing modes using helical field, 17:32395 (R;CN;In Chinese)

The technology and application study of NTD CZ silicon for pressure sensing elements, 17:31602 (R;CN;In Chinese)

The time-space structure evolution of tokamak plasma under the mutual interactions of tearing mode with transport process, 17:32398 (R;CN;In Chinese)

Theoretical study of aluminium-copper impedance matching targets for laser-high-pressure state equation, 17:31411 (R;CN;In Chinese)

Thermocouple calibration facility for 2900 deg C high temperature and its applications, 17:31607 (R;CN;In Chinese)

Transport processes of conversion electron in surface layers, 17:32371 (R;CN;In Chinese)

Using helium mass-spectrometer leak detector to detect the leak of vaporizer in Qinshan nuclear power plant, 17:30885 (R;CN;In Chinese)

Using probability density distribution analysis of bubble diameter and spatial frequency analysis to identify flow pattern of two-phase flow in an unvisual pipe, 17:31377 (R;CN;In Chinese)

Using tritium oxide to study moisture transfer in drying phase of mixed dry and wet grain, 17:30788 (R;CN)

Inventory of mires and peat resources, Parkano, Western Finland. Part 1, 17:30504 (R;FI;In Finnish)
The peat recources of Ylaemaa and their usefulness, 17:30501 (R;FI;In Finnish)
The peat resources and their potential use in Kihnioe, Western Finland, 17:30506 (R;FI;In Finnish)
The peat resources of Aehtaeri and their potential use. Part 1, 17:30495 (R;FI;In Finnish)
The peat resources of Aehtaeri and their potential use. Part 2, 17:30517 (R;FI;In Finnish)
The peat resources of Kuortane and their potential use, 17:30512 (R;FI;In Finnish)
The peat resources of Miehikkaelae and their usefulness, 17:30487 (R;FI;In Finnish)
The peat resources of Toeysae and their potential use, 17:30515 (R;FI;In Finnish)
Utilization of ADP in peat inventory and research, 17:30491 (R;FI;In Finnish)

Geological Survey of Finland, Kuopio (Finland)
The mires and peat resources of the commune of Suonenjoki and their potential use, 17:30490 (R;FI;In Finnish)
The mires and peat resources of the commune of Pudasjaervi and their potential use. Part 7, 17:30497 (R;FI;In Finnish)
The mires and peat resources of the commune of Isokyroe and their potential use. Part 1, 17:30498 (R;FI;In Finnish)
The mires and peat resources of the commune of Utajaervi and their potential use. Part 4, 17:30499 (R;FI;In Finnish)
The mires and peat resources of the commune of Pudasjaervi and their potential use. Part 8, 17:30510 (R;FI;In Finnish)
The mires and peat resources of the commune of Utajaervi and their potential use. Part 5, 17:30511 (R;FI;In Finnish)
The mires and peat resources of the commune of Pudasjaervi and their potential use. Part 9, 17:30516 (R;FI;In Finnish)
The mires and their peat resources in Oulainen, 17:30489 (R;FI;In Finnish)
The mires and their peat resources in Jaeppilae: Part 2 and summary, 17:30494 (R;FI;In Finnish)
The mires and their peat resources in Nilsiae, 17:30505 (R;FI;In Finnish)
The mires and their peat resources in Liminka, Lumijoki and Temmes, 17:30507 (R;FI;In Finnish)
The mires and their peat resources in Outokumpu. Part 1, 17:30508 (R;FI;In Finnish)
The mires and their potentialities in peat production in the municipality of Ilomantsi, 17:30513 (R;FI;In Finnish)
The mires and their resources in Kiuruvesi, 17:30492 (R;FI;In Finnish)
The peat resources of Hankasalmi and their usefulness. Part 1, 17:30502 (R;FI;In Finnish)
The peat resources of seven peat deposits in the commune of Lestijaervi in Western Finland, 17:30493 (R;FI;In Finnish)
The peat resources of seventeen peat deposits in the commune of Reisjaervi in Western Finland, 17:30503 (R;FI;In Finnish)
The peat resources of seventeen peat deposits in the commune of Kannonkoski in Central Finland, 17:30514 (R;FI;In Finnish)
The peat resources of the municipality of Juuka and their potentialities in fuel peat production. Part 1, 17:30488 (R;FI;In Finnish)
The peat resources of the municipality of Ilomantsi and their potentialities in fuel peat production. Part 1, 17:30496 (R;FI;In Finnish)

Geological Survey of Finland, Rovaniemi (Finland)
Inventory of mires and peat resources in Simo. Part 2, 17:30509 (R;FI;In Finnish)
The mires and peat resources of the commune of Simo in 1985-1986 and their potential use, 17:30500 (R;FI;In Finnish)

Geological Survey of Japan, Tsukuba, Ibaraki (Japan)
Analysis and evaluation of data from the nationwide survey of geothermal exploration, 17:30841 (I;JP;In Japanese)
Analysis and evaluation of information network system, 17:32573 (IA;JP;In Japanese)
Analysis and evaluation of knowledge base and rule. Part 1.: Geochemical classification and significance of original water relating to geothermal system, 17:30851 (IA;JP;In Japanese)
Analysis and evaluation of knowledge base and rule.: Development of analysis method of histogram data (distribution of chlorine concentration in the hot spring waters in Japan), 17:30852 (IA;JP;In Japanese)

Analysis and evaluation of resistivity data.: MT profiling of the southerm Tohoku district, 17:32010 (IA;JP;In Japanese)
Basic mapping for evaluation of prospective geothermal potential regions in the 1:500,000 topographic map 'Niigata', 17:30836 (IA;JP;In Japanese)
Comparison of geothermal potentials of main geothermal areas in Japan, based on borehole temperature data, 17:30843 (IA;JP;In Japanese)
Compilation of a gravity map on 1/500,000 Niigata sheet, 17:32009 (IA;JP;In Japanese)
Hypothesis on competition of thermal conduction zone and juvenile hydrothermal solution retention zones in the surroundings of magma, 17:30840 (IA;JP;In Japanese)
Interim report of the results of research and development in Sunshine Project in FY1990.: Researches on the technologies of the geothermal resource evaluation of Japan, 17:30832 (I;JP;In Japanese)
Preparation of geothermal resource map of Japan, 17:30833 (IA;JP;In Japanese)
Statistical distribution of temperatures and physical properties of geothermal areas in Japan, based on logging and core data of boreholes, 17:30839 (IA;JP;In Japanese)
Study of geothermal resource evaluation by potential water volume method, 17:30834 (IA;JP;In Japanese)
Study on collection of resource evaluation bases in the northern Tohoku district (Akita-Koma).: Geological survey of Tashirodake and Tara-Komagadake areas, 17:30835 (IA;JP;In Japanese)
Temperature gradient map of the Japanese Islands, 17:30850 (IA;JP;In Japanese)
Underground structure and temperature structure of the Aso area obtained from gravity and magnetic analysis, 17:30842 (IA;JP;In Japanese)

Geological Survey, Denver, CO (United States)
Earthquake-induced water-level fluctuations at Yucca Mountain, Nevada, April 1992, 17:31747 (R;US)

Geological Survey, Idaho Falls, ID (United States)
Radionuclides, inorganic constituents, organic compounds, and bacteria in water from selected wells and springs from the southern boundary of the Idaho National Engineering Laboratory to the Hagerman Area, Idaho, 1990, 17:31752 (R;US)

George Washington Univ., Washington, DC (United States). Center for Nuclear Studies
Investigations of the structure and electromagnetic interactions of few-body systems: Progress report, 1 August 1991–31 July 1992, 17:32205 (R;US)

Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany)
An 'in acceptance' comparison of Si + Au data and RQMD predictions, 17:32286 (IA;DE)
Analysis of discrete ambiguities for $\pi N \Delta$ and $\rho N \Delta$ vertex functions using inclusive charge-exchange reactions, 17:32256 (IA;DE)
Baryon and pion distributions from nucleus-nucleus collisions at 15 GeV/nucleon, 17:32287 (IA;DE)
Chiral symmetry in particle physics and its manifest realization in terms of parity doublets, 17:32094 (IA;DE)
Collisions in an expanding pion gas and the pperpendicular to spectrum in ultrarelativistic heavy ion collisions, 17:32301 (IA;DE)
Coupling and decoupling of pions and deltas in nuclear matter, 17:32225 (IA;DE)
Detection of neutrons by BAF$_2$ TAPS modules in relativistic heavy ion collisions, 17:31566 (IA;DE)

Comparative study of qualitative cytogenetic effects induced by fractionated γ-neutron irradiation in man lymphocytes at G_0 and G_1 stages, 17:31970 (RA;SU;In Russian)

Cytogenetics of radiation-induced adaptation in man lymphocytes, 17:31973 (RA;SU;In Russian)

Damping of resistive instability in UNK-1 with digital electronics in feedback, 17:31536 (R;SU;In Russian)

Effect of durable γ-radiation on E.Coli, 17:31963 (RA;SU;In Russian)

Effect of millimeter radiation on radiationinduced repair of genome conformation state, 17:31957 (IA;SU;In Russian)

Electrical transparency of grids used in gaseous particle detectors, 17:31571 (RA;SU)

Evolutionary regularities formation of hierarchic system of genome reliability, 17:31979 (RA;SU;In Russian)

Genetic effects of charged particles: Proceedings of conference, 17:31959 (R;SU)

Induction of SOS-system in E.Coli under γ-irradiation in the presence of anoxic sensitizer TAN, 17:31964 (RA;SU;In Russian)

JINR rapid communications: Collection, 17:31570 (R;SU)

Kinetics of formation of induced mutants of Saccharomyces cerevisiae, 17:31966 (RA;SU;In Russian)

Low dose radiation effects: a holistic model, 17:31960 (RA;SU)
Microdosimetrical calculations of the rate of repairable DNA - double strand breaks based on a model for the interpretation of experiments with different doses and radiation qualities, 17:31967 (RA;SU)
Modification of γ-induced mutagenesis in Ames test-strains: 1. Radioprotector effect on mutagenesis in Salmonella typhimurium, 17:31961 (RA;SU;In Russian)
Modification of γ-induced mutagenesis in Ames test-strains: 2. TAN effect on Salmonella typhimurium mutagenesis, 17:31962 (RA;SU;In Russian)
Modification of primary radiation injuries of biological systems by into compounds, 17:31978 (RA;SU;In Russian)
Modifying influence of DNA synthesis inhibitors on the effect of irradiation of Chinese hamster cells, 17:31968 (RA;SU)
Multiquark stable and metastable states, 17:32329 (RA;SU)
New type of radiation aftereffect: study of life span in generations of irradiated drosophila, 17:31976 (RA;SU;In Russian)
On the check-up of the violation of the relativity principle by the investigation of the local properties of spin precession of relativistic electrons conducted at the storage ring, 17:31531 (R;SU;In Russian)
Photoreactivation of γ-induced premutations damages in Drosophila wild and phr$^-$ genotypes, 17:31977 (RA;SU;In Russian)
Post-irradiation DNA degradation in certain repair-deficient E.Coli strains, 17:31965 (RA;SU)
Postradiation recovery and radioresistance of seeds, 17:31958 (IA;SU;In Russian)
Radiosensitivity of L5178Y mice lymphoma cells and state of antioxidant enzyme system, 17:31971 (RA;SU;In Russian)
Regularities of DNA synthesis repair in populations of irradiated mammalian cells, 17:31969 (RA;SU;In Russian)
Simulation and depression of repair in mutagenesis of Drosophila: adaptive response and heavy ion effect, 17:31975 (RA;SU)
Study of characteristics of flat scintillation detectors with a fiber optics light guide for the multilayer charged-particle ΔE-spectrometer, 17:31572 (RA;SU;In Russian)
The stability of the damper system for the coherent transverse oscillations of the beam in a synchrotron, 17:31458 (R;SU;In Russian)
The z-transform application for solving the problem of free beam oscillation damping in the accelerator, 17:31456 (R;SU;In Russian)
Theoretical treatment of a classical transverse feedback system using Z-transform, 17:31455 (R;SU)
To the problem of DNA-target for radiation-induced exchange chromosomal aberrations, 17:31974 (RA;SU;In Russian)
X-radiation and hydrogen peroxide induce adaptation of lymphocytes of man peripheral blood to subsequent x-irradiation, 17:31972 (RA;SU;In Russian)

Joint Inst. for Nuclear Research, Dubna (Russian Federation). Dept. of Radiation Safety
Data bank of individual dosimtry control in the JINR, 17:31956 (R;SU;In Russian)
Double differential neutron and proton productions cross sections in nucleus-nucleus collisions, 17:32335 (R;SU;In Russian)

Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Computing Techniques and Automation
A numerical solution of the two-center problem, 17:32038 (R;SU;In Russian)
A possible interpretation of anomalous behaviour of proton spectrum at 0 deg from deuteron fragmentation at 9 GeV/c, 17:32330 (RA;SU;In Russian)
Algorithm and program for solution of the Sturm-Liouville problem using the high order accuracy spline scheme, 17:32553 (R;SU;In Russian)
Algorithm for the solution of the Faddeev equation for a system of three identical spinless particles, 17:32034 (R;SU;In Russian)
Algorithm of numerical calculations of differential Yakubovsky equations for the (1+3) scattering problem, 17:32035 (R;SU;In Russian)
Analysis of field space distribution of a spectrometric magnet, 17:31617 (R;SU;In Russian)
Computation of Green function of the Schroedinger-like partial differential equations by the numerical functional integration, 17:32552 (R;SU)
Evaluation of the high energy proton accumulation effect in the geomagnetic field by the mapping method, 17:32051 (R;SU;In Russian)
Newtonian iterative scheme for solving Schwinger-Dyson equation for a quark, 17:32145 (R;SU)
Numerical method of solution of a boundary value problem for the coupled integro-differential equations (The Bethe-Salpeter equation), 17:32037 (R;SU;In Russian)
On a modification of a continuous analog of the Newton method, 17:32036 (R;SU;In Russian)

Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of High Energy
Calculations of a two-dimensional pulsed magnetic field of an emulsion detector coil by the combined method, 17:31574 (R;SU;In Russian)
Charge exchange $^7Li \to {}^7Be$ cross sections at 21 GeV/c on H,C,Al,Cu, Pb nuclei, 17:32331 (R;SU;In Russian)
Charge-exchange cross sections of the $^3H \to {}^3He$ reaction on hydrogen, carbon, aluminium, copper and lead at 9 GeV/c, 17:32332 (R;SU;In Russian)
Hadrons in statu nascendi, 17:32323 (R;SU)
Investigation of two-track resolution efficiency of the VKD vertex detector using simulation of p-barp interactions at 6 TeV, 17:31573 (R;SU;In Russian)
Multichannel recorder of transition processes in superconducting magnets, 17:31488 (R;SU;In Russian)
Multiquark stable and metastable states, 17:32329 (RA;SU)
Radio-frequency linear ion accelerator (proposal for development of the acceleration for ion beam implantation), 17:31437 (R;SU;In Russian)
Relativity theory in (2+2)-space, 17:32030 (R;SU)
Simulation of one-turn system of initial betatron beam oscillations for UNK I stage, 17:31535 (R;SU;In Russian)
Some problems of relativistic electrodynamics, 17:32106 (R;SU)
Study of characteristics of flat scintillation detectors with a fiber optics light guide for the multilayer charged-particle ΔE-spectrometer, 17:31572 (RA;SU;In Russian)
Systems for study on spatial beam characteristics based on CCD, 17:31459 (R;SU;In Russian)
Triggering system for relativistic hypernuclei detection, 17:31575 (R;SU;In Russian)

Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Neutron Physics
A system for experiments automation on the neutron diffractometer DN-2 at the pulsed reactor IBR-2, 17:31578 (R;SU;In Russian)
Calculation of a variant of the 'inelastic' adiabatic spin-flipper for cold neutrons, 17:32346 (R;SU;In Russian)
Generalization of Schroedinger equation to the Boltzmann phase space, 17:32039 (R;SU;In Russian)
Hardware for research of transition processes in condensed matter with neutron diffraction method, 17:31616 (R;SU;In Russian)
Measurement of the cross section of the $^{36}Ar(n,\alpha)^{33}S$ and $^{50}V(n,p)^{50}Ti$ reactions induced by thermal neutrons, 17:32333 (R;SU;In Russian)
On different values of the neutron-electron scattering amplitude and neutron mean square charge radius obtained from the low-energy dependence of the scattering amplitude, 17:32325 (R;SU)
To the problem of anomalous radiative proton capture in thick carbon targets, 17:32334 (R;SU;In Russian)
VKP-6 programmed time-to-digital converter with additional functions, 17:31412 (R;SU;In Russian)

Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Nuclear Problems
Accelerating system simulation of U-200T isochronous cyclotron, 17:31436 (R;SU;In Russian)
Analysis of data from the HYPERON facility in experimental investigation of the inclusive production of K^0 and $K^{*0}(892)$ mesons, 17:31577 (R;SU;In Russian)
Calculation of the beam extraction system from the U-120K cyclotron, 17:31489 (R;SU;In Russian)

Convertion project of the AS UzSSR cyclotron, 17:31435 (R;SU;In Russian)
Correlation experiments on checking the existence of low temperature nuclear fusion in titanium and zirconium deuterides, 17:32429 (R;SU)
Determination of the synchronous phase in a phasotron, 17:31457 (R;SU;In Russian)
Direct current transducer, 17:31618 (R;SU;In Russian)
Electrical transparency of grids used in gaseous particle detectors, 17:31571 (RA;SU)
Energy division and hadron transverse momenta in the quark-gluon strings model, 17:32111 (R;SU)
Experimental observation of neutron emission insaturation of titanium chips with gaseous deuterium, 17:32431 (R;SU)
Geometry choice and calculation of the U-200T isochronous cyclotron accelerating system, 17:31491 (R;SU;In Russian)
Hadronization of highly virtual quarks in nuclei, 17:32233 (R;SU)
Hall-effect device of high accuracy, 17:31619 (R;SU;In Russian)
Inverse meso-optics and its potential applications, 17:31569 (R;SU)
Investigation of β-ν angular correlation in decay of ^{24}Na nuclei, 17:32249 (R;SU)
Investigation of hydrogen permeability of protective coating for high-temperature alloy EI698, 17:31232 (R;SU;In Russian)
JINR rapid communications: Collection, 17:31570 (R;SU)
JINR Tau-charm factory design considerations, 17:31533 (R;SU)
Neutron spectra in the energy range from 10^{-8} to hundreds of MeV measurement in hard scattered radiation fields, 17:32347 (R;SU;In Russian)
Observation of neutron bursts in saturation of titanium with deuterium by means of D_2O electrolysis, 17:32430 (R;SU)
On the problem of enhancement of neutrino oscillation in matter, 17:32165 (R;SU)
On-line system for selection and measurement of currents in magnetic elements of beam lines at the JINR phasotron, 17:31434 (R;SU;In Russian)
Quantum effects and colour transparency in charmonium photoproduction on nuclei, 17:32324 (R;SU)
Resonance amplification of the nuclear reaction X(a,b)Y near the a+X channel threshold, 17:32327 (R;SU)
The effect of the anoxic radiosensitizing agent Tan on induction of revertants by γ-rays and helium ions in salmonella tester strains, 17:31982 (R;SU)
The system of standard currents, 17:31493 (R;SU;In Russian)
The technique for measuring of the dip angle of the straight particle tracks in the nuclear emulsion by means of the meso-optical Fourier transform microscope, 17:31567 (R;SU;In Russian)
Upgrading of the stabilized direct-current power supply unit for the main winding of the iron-current channel at the JINR phasotron, 17:31492 (R;SU;In Russian)
Wide aperture scintillation hodoscope with FEU-85, 17:31568 (R;SU;In Russian)

Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Nuclear Reactions
Concentration of light homologs of superheavy elements in coal combustion, 17:31724 (R;SU;In Russian)
Dissipative particle dynamics in ee-bar storage rings in the presence of linear synchro-betatron coupling, 17:31534 (R;SU)
Electrochemical etching of fission fragment tracks in dielectric detectors for use in chemical experiments with transplutonium elements, 17:31302 (R;SU;In Russian)
Investigation of soft errors in VLCIC RAM under influence of heavy ions, 17:31604 (R;SU;In Russian)
Linear synchro-betatron resonances, driven by beam-beam interaction, 17:31532 (R;SU)
Multielemental gamma activation analysis of copper-molybdenum ores and its production of processing using microtron, 17:31301 (R;SU;In Russian)
New mass measurements of neutron-rich nuclei near N=20*, 17:32234 (R;SU)
Setup for separation and investigation of β-n decay of neutron-rich nuclei, 17:31576 (R;SU;In Russian)
The experimental setup for optical spectra measurements with a pulsed laser, 17:31579 (R;SU;In Russian)

Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics
'Schroedinger equations' of higher (>2) order, 17:32033 (R;SU;In Russian)
A new exact solution to the classical equations of motion of the relativistic string with massive ends, 17:32104 (R;SU)
Analysis of $\pi\pi$ scattering with taking account of the KK-bar abd $\eta\eta$ thresholds, 17:32166 (R;SU;In Russian)
Calculation of the Higgs boson decay widths into boson pairs, 17:32146 (R;SU;In Russian)
Clusters in the nuclear model of chiral field solitons, 17:32235 (RA;SU)
Description of the Gamow-Teller β^+-decays and (n,p) transitions in spherical nuclei, 17:32250 (R;SU)
Gottfried sum rule and mesonic exchanges in deuteron, 17:32112 (R;SU)
H^+H^- interaction up to higher orders of perturbation theory in the model with two Higgs doublets (self-energy and vertex diagrams), 17:32194 (R;SU)
H^+H^- interaction up to higher orders of perturbation theory in the model with two Higgs doublets (Lagrangian and one-loop amplitudes), 17:32142 (R;SU)
Hadronization of QCD, 17:32143 (R;SU)
Intermittency in the limit of a large number of correlated components, 17:32032 (R;SU;In Russian)
Invariant structures and static forces in gauge theories, 17:32109 (R;SU)
Invariant structures in gauge theories and confinement, 17:32107 (R;SU)
Inverse pion electroproduction at high energies- a source of information on the hadron form factors, 17:32196 (R;SU)
Mechanism of enhanced yield of light particles in compound nucleus formation: diffusion description, 17:32328 (R;SU)
Off-shell effects in the dynamical model of pion photoproduction on nucleon, 17:32326 (R;SU)
On a method of solution of dispersion equations for low-energy pion-pion scattering, 17:32167 (R;SU;In Russian)
On classical electrodynamics with distribution-valued sources, 17:32110 (R;SU)
On the energy-momentum tensors for field theories in spaces with affine connection and metric: Generalized Bianchi identities and different energy-momentum tensors, 17:32102 (R;SU)
On the energy-momentum tensors for field theories in spaces with affine connection and metric: Conditions for existence of energy-momentum tensors, 17:32103 (R;SU)
On the invariant measure for the nonlinear Schroedinger equation, 17:32031 (R;SU)
Parameters of low-energy physics, radial excitations of π, K, D mesons and QCD potential, 17:32144 (R;SU)
Parasupersymmetric spinning particle and topological gauge fields, 17:32105 (R;SU)
Quadrupole electric transitions in $^{156'158'160'162'164}$Dy isotopes, 17:32237 (R;SU;In Russian)
Quantum discrete gauge models with bosonic and fermionic degrees of freedom, 17:32108 (R;SU)
Some new aspects of the unitary and analytic VMD model for electromagnetic structure of hadrons, 17:32195 (R;SU)
The isoscalar 4^- and 5^- giant resonances in spherical nuclei, 17:32236 (R;SU;In Russian)
The system whose Hamiltonian is a time-dependent quadratic form in coordinates and momenta, 17:32101 (R;SU)

A new approach to localize sites of inflammation using streptavidin and biotin – an improvement over nonspecific polyclonal IgG, 17:31838 (RA;US)

A novel bifunctional chelating agent α,ε-N,N′-bis(L-cysteinyl)-L-lysine for radiolabeling of monoclonal antibodies with technetium-99m, 17:31827 (RA;US)

A simple method for producing a technetium-99m-labeled liposome which is stable in vivo, 17:31815 (RA;US)

An animal model for radiopharmaceutical research (Didelphis albiventis) in HM-PAO-Tc-99m use, 17:31843 (RA;US)

Analysis of [F-18]-L-6-fluorodopa and metabolites in plasma for PET studies, 17:31845 (RA;US)

Behavior of various radiochemical species present in Tc-99m labeled monoclonal antibody preparations, 17:31811 (RA;US)

Biological evaluation of selected carbohydrate antibody conjugates, 17:31833 (RA;US)

Clearance curve analysis of extravascularly distributed radiopharmaceuticals, 17:31809 (RA;US)

Comparative loss of In-111 labeled PMN granulocyte from dog, pig and man to cellulose acetate hemodialyzer (HD), 17:31842 (RA;US)

Comparative PMN granulocyte retention of In-111 and Tc-99m HMPAO labeled PMN granulocyte of dogs on cellulose acetate hemodialyzers (HD), 17:31841 (RA;US)

Comparison of methods for incorporating a radioiodinated residualizing cholesteryl ester analog into low density lipoprotein, 17:31812 (RA;US)

Complexes of technetium-99m with phosphomycine obtained by pH shifting: Biological characteristics, whole-body autoradiography, Γ-camera study, 17:31828 (RA;US)

Correlation of lipophilicity to biodistribution of Tc-99m labelled aminothiols, 17:31782 (RA;US)

Coupling of ^{125}I-EGF to serum albumin to stabilize the radioiodine bond: Radiolabeling, purification by HPLC, stability and biodistribution in mice, 17:31829 (RA;US)

Effect of DTPA molecules conjugated to lysine residues on metabolism of I-125 and Tc-99m labeled T101, 17:31806 (RA;US)

Effect of stereoisomers (d,l and meso) of Tc-99m HMPAO on platelet kinetics in Beagle dogs: Comparison with In-111 labeled platelets, 17:31913 (RA;US)

Effect of stereoisomers (d,l and meso) of Tc-99m HMPAO on ligand exchange and binding with hemoglobin: Comparison with In-111 tropolone, 17:31921 (RA;US)

Elevated brain uptake of ^{59} citrate: Correlation with the critical period of brain development in experimental phenylketonuria, 17:31920 (RA;US)

Enhanced tumor imaging with PokeWeed Mitogen, 17:31820 (RA;US)

Enhancement of liver uptake of a radioiodinated triglyceride analog by prior incorporation into a lipoprotein-like emulsion, 17:31917 (RA;US)

Evaluation of ^{99m}Tc labelled anti CEA monoclonal antibody in immunsupressed mice bearing human colorectal carcinoma xenografts, 17:31804 (RA;US)

Evaluation of metyrapone as a radiotracer for SPECT, 17:31846 (RA;US)

Evaluation of multiple-dose ^{153}Sm-EDTMP for bone pain palliation in cancer patients, 17:31787 (RA;US)

From pure radionuclide species in solution through pure radiopharmaceuticals and simple radiopharmacology to disease-specific nuclear medicine, 17:31810 (RA;US)

$Ga(NO_3)_3$ uptake by human-derived small cell lung cancer cells, 17:31789 (RA;US)

Hepatic uptake of a radiolabeled monoclonal antibody is not receptor-mediated, 17:31803 (RA;US)

I-131 anti-Ama monoclonal antibody for radioimaging of atheromas, 17:31836 (RA;US)

Immunochemical, radiochemical and pharmacokinetic comparison of pepsin-, papain- and bromelain-generated $F(ab')_2$ fragments of the breast carcinoma reactive monoclonal antibody 15A8, 17:31832 (RA;US)

Improved localization of tumor with streptavidin and labeled biotin as a substitute for antibody, 17:31830 (RA;US)

In vivo studies of ethanol on prolactin and luteinizing hormone in rats, 17:32003 (RA;US)

In-111-acetylacetone-cyclodextrin inclusion complex: A new form of radiopharmaceutical, 17:31793 (RA;US)

Indium-111 labelled cationic complexes of aminothiols. Structure-activity correlation, 17:31794 (RA;US)

Interaction of triazolam with central type benzodiazepine receptors studied in living baboons using positron emission tomography, 17:31798 (RA;US)

Intratumoral injection of 5-^{125}I-iodo-2′-deoxyuridine in patients with colon cancer, 17:31817 (RA;US)

Intrinsic efficacies of benzodiazepine receptor ligands evaluated in vivo by positron emission tomography in the primate brain, 17:31799 (RA;US)

Labeling and radioimmunoscintigraphic application of monoclonal antibodies with 131-I and 99m-Tc, 17:31834 (RA;US)
Labeling, control and radiopharmaceutical evaluation of ^{99m}Tc-ADP as tumor seeking agent, 17:31818 (RA;US)
Mapping histone4 mRNA in pig brain with In-111 labeled anti-sense oligo-nucleotide by in-situ hybridization, 17:31801 (RA;US)
Mitochondrial and sarcolemmal membrane potentials determine accumulation of the R and S stereoisomers of the technetium isonitrile complex $Tc(CNCH(CH_2CH_3)CH_2OCH_3)_6^+$, 17:31822 (RA;US)
Non-invasive imaging of histone4 mRNA transcription in mammary tumor with In-111 labeled aminohexyl oligonucleotide in a mouse model, 17:31821 (RA;US)
Pertechnetate solutions: Their history and the labelling of HMPAO, 17:31790 (RA;US)
Pharmacokinetics of an anti-CEA antibody radiolabeled with ^{111}In via DTPA and with ^{99m}Tc via two direct labeling methods: A comparison in patients, 17:31831 (RA;US)
Pharmacological properties of lisuride radiolabeled derivatives used for in vivo imaging of D2 dopamine receptors, 17:31796 (RA;US)
Preliminary studies on the metabolism of Tc-99m MAb-170, 17:31805 (RA;US)
Preparation and biodistribution of Tc^{III}-N,N′-ethylenebis (acetylacetone thioiminato) bis (triphenylphosphine) complex, 17:31825 (RA;US)
Preparation of bromine-77 labeled monoclonal anti-hPLAP antibody using chloramine-T, 17:31835 (RA;US)
Production of no-carrier added Yttrium-86 for radio-immuno-imaging using positron emission tomography (PET), 17:31844 (RA;US)
Purification of radiolabeled monoclonal antibodies to angiotensin-converting enzyme significantly improves specificity and efficacy of its targeting into the lung, 17:31788 (RA;US)
Quantification of ^{76}Br-bromolisuride binding to central dopamine D2 receptors studied in baboon by PET, 17:31797 (RA;US)
Quantitation of comparative thrombogenicity of dog, pig and human platelets (PLT) in a hemodialyzer (HD), 17:31840 (RA;US)
Quantitation of thrombogenicity of technetium-99M and indium-111 labeled canine platelets (PLT) in a hemodialyzer (HD), 17:31839 (RA;US)
Radioiodinated phospholipid ether analogs as noninvasive tumor imaging agents, 17:31784 (RA;US)
Radiopharmacological studies of ^{99m}Tc-CPI: Experience with isolated rat atrial tissue, 17:31823 (RA;US)
Radiopharmacological studies of a new functionalized isonitrile technetium complex: $[Tc(2\text{-ethoxy-2-methylpropylisonitrile})_6]^+$, 17:31824 (RA;US)
Radiopharmacology of inhaled Xe-133 in skeletal sites containing deposits of Gaucher cells, 17:31795 (RA;US)
Radiopharmacology of new diiodo analogs of calichemicin fragment, 17:31800 (RA;US)
Strategies for pharmacokinetic modeling of monoclonal antibody biodistribution in man, 17:31808 (RA;US)
Structure-activity relationships among nitroimidazole nucleosides used as markers of tissue hypoxia, 17:31915 (RA;US)
Synthesis and evaluation of radioiodinated cholesteryl ethers as lipoprotein probes, 17:31813 (RA;US)
Synthesis and evaluation of technetium-99m monocationic mixed ligand complexes of phenyl substituted/condensed tetradentate Schiff's bases and trimethylphosphine, 17:31780 (RA;US)
Synthesis, pharmacokinetic and clinical studies of ^{131}I-MIBG prepared in Mexico, 17:31837 (RA;US)
Tc^{99m}-LDL as tracer for LDL-receptor mediated processes, 17:31802 (RA;US)
Tc^{99m}-LDL kinetics in the isolated perfused rat liver, 17:31814 (RA;US)
Tc-99m-labeled adriamycin, 17:31781 (RA;US)
Technetium labelled somatostatin a potential agent for in vivo tumor localization, 17:31791 (RA;US)
Technetium-99m biguanide complexes: ^{99m}Tc-1,1-dimethylbiguanide, 17:31826 (RA;US)
The preparation and biodistribution of secondary Tc-HMPAO, 17:31779 (RA;US)

Personal Author Index

Authors' surnames are indexed in the form appearing in the publication cited; given names generally have been reduced to initials. For documents with multiple authors, each author name is indexed. The entry for a primary author (first author listed on an abstracted document) includes the full document title and citation number. Entries for other authors provide a cross-reference to the primary author. Also included is information on the document type, country of publication, and the document language listed in parentheses in the format (J;FR;In French and English). Accent marks are not input because of computer alphabetization. Spelling and transliteration follow standard conventions.

Subject Index

This index is arranged by subject descriptors selected from those assigned to each citation in this publication. Subject descriptors are selected from a controlled thesaurus of terms, ETDE/PUB–2, *International Energy: Subject Thesaurus.* In order to enhance indexing, subject descriptor entries generally consist of a pair of descriptors: a main term and a qualifier term. Each entry includes the full title (which may be followed by supplementary descriptive information in parentheses) and the citation number. Additional information given in parentheses indicates the document type (an abbreviation such as B for book), the country of publication (such as DE for Federal Republic of Germany), and the language if non-English.

See references guide users from synonymous terms to the descriptors selected for the concept. *See also* references indicate subject concepts that are more specific than a particular descriptor. To gain complete subject coverage, all such terms should be reviewed.

Experimental study of interactions of highly charged ions with atoms at keV energies: Progress report, July 1, 1991–June 30, 1992, 17:32357 (R;US)
ARIZONA
Key wintertime meteorological features of the Grand Canyon and the Colorado Plateaus Basin, 17:31668 (R;US)
ARMS CONTROL
Constitutional and legal implications of arms control verification technologies, 17:31195 (R;US)
INF and IAEA: A comparative analysis of verification strategy: [Final report], 17:31197 (R;US)
Nuclear employment policy and optimal exchange strategies, 17:31194 (R;US)
The IAEA system and experience as a model for Information Management under the Chemical Weapons Convention, 17:31196 (R;US)
ARRAY PROCESSORS
Memory access in shared virtual memory, 17:32502 (R;US)
ScaLAPACK: A scalable linear algebra library for distributed memory concurrent computers, 17:32514 (R;US)
The performance realities of massively parallel processors: A case study, 17:32556 (R;US)
ARSENIC COMPOUNDS
See also ORGANIC ARSENIC COMPOUNDS
Control of mercury emissions from coal-fired boilers, 17:30475 (R;US)
ARSONIUM COMPOUNDS
See ARSENIC COMPOUNDS
ARTIFICIAL INTELLIGENCE
A research on applications of qualitative reasoning techniques in Human Acts Simulation Program, 17:31359 (R;JP)
ASHES
See also FLY ASH
Combustion characterization of the blend of plant coal and recovered coal fines: Technical report, December 1, 1991–February 29, 1992, 17:30552 (R;US)
Mechanism of surface enrichment and adhesion of coal combustion particulates: Second quarterly report, September 1987, 17:30549 (R;US)
Oil shale ash-layer thickness and char combustion kinetics, 17:30602 (R;US)
Performance evaluation of micronized-magnetite cycloning at high relative densities of separation, 17:30427 (R;US)
ASSE SALT MINE
Progress report of the ECN contribution to the experiments in the HAW project: 1st half year 1991, 17:30681 (R;NL)
Research on backfilling and sealing of Rooms and Galleries in a repository in salt, 17:30696 (R;FR;In German)
ASSETS
See FINANCIAL DATA
ATF TORSATRON
Biasing experiments on the Advanced Toroidal Facility, 17:32404 (R;US)
Effects of limiter biasing on the ATF torsatron, 17:32433 (R;US)
ATLANTIC OCEAN
See also NORTH SEA
Marine geophysical studies in the Northern Atlantic with emphasis on sedimentation, crustal structure and subsidence, 17:30565 (I;NO)
ATMOSPHERIC CHEMISTRY
A comparison of different chemical models for use in regional simulations of air pollution, 17:31659 (R;SE;In Swedish)
ATMOSPHERIC CIRCULATION
Modeling the dispersion of tracer plumes in the Colorado front range boundary layer during night- and day-time conditions, 17:31678 (R;US)
ATOMIC BOMBS
See NUCLEAR WEAPONS
ATOMIC EXPLOSIONS
See NUCLEAR EXPLOSIONS
ATOMIC FLUORESCENCE SPECTROSCOPY
See FLUORESCENCE SPECTROSCOPY
ATOMIC WEAPONS
See NUCLEAR WEAPONS
AUDITS
Computer assisted audit techniques for UNIX (UNIX-CAATS), 17:32509 (R;US)
AUSTENITIC STEELS
See also STEEL-CR17NI12MO3-L
STEEL-CR18NI10TI
STEEL-CR19NI10
Isotopic tailoring with ^{59}Ni to study the effect of helium on microstructural evolution and mechanical properties of neutron-irradiated Fe-Cr-Ni alloys, 17:32466 (R;US)
AUTOMOBILE EFFICIENCY STANDARDS
See AUTOMOBILES
STANDARDS
AUTOMOBILES
Driving a car with custom-designed fuzzy inferencing VLSI chips and boards, 17:32511 (R;US)
Fitting catalytic converters on cars, 17:31664 (I;DK;In Danish)
Motor vehicle fuel economy, the forgotten HC control stragegy?, 17:31187 (R;US)
AUTOMOTIVE FUELS
Alternative automotive fuels in USA. Cost-, supply- and environmental aspects, 17:30585 (R;SE;In Swedish)

B

B CODES
BOILER PERF MODEL3.0: Fossil-fired boilers, 17:32522 (CM;US)

B MESONS
Beauty physics-CKM matrix, 17:32174 (R;FR;In French)

BACKFILLING
Research on backfilling and sealing of Rooms and Galleries in a repository in salt, 17:30696 (R;FR;In German)

BACKGROUND RADIATION
Design of TOPAZ masking system using EGS4, 17:31501 (RA;JP;In Japanese)
Measurement of the radiation-level at the site of the Dutch National Institute for Public Health and Environmental Hygiene (RIVM) during the year 1990, 17:31731 (R;NL;In Dutch)

BACTERIAL DISEASES
A new approach to localize sites of inflammation using streptavidin and biotin – an improvement over nonspecific polyclonal IgG, 17:31838 (RA;US)
Tissue distribution and biokinetics of radiolabeled proteins in rats with a focal infection, 17:31918 (RA;US)

BALTIC SEA
The conditions of the seas around Sweden: Report from the activities in 1991, 17:31756 (R;SE;In Swedish, English)

BANACH SPACE
See also HILBERT SPACE
Existence of viable solutions for nonconvex-valued differential inclusions in Banach spaces, 17:32022 (R;XA)

BARIUM OXIDES
Flux pinning in oxygen-depleted $YBa_2Cu_3O_{7-y}$ single crystals, 17:31264 (R;US)
High-temperature deformation and diffusion in oxides, 17:31245 (R;US)

BARIUM SILICATES
The standard molar enthalpies of formation of $BaSiO_3$(s) and Ba_2SiO_4(s), 17:30960 (R;NL)

BARYON NUMBER
Baryon and lepton number violation in the standard model at high energy, 17:32122 (R;US)

BARYON NUMBER 2 RESONANCES
See DIBARYONS

BARYON RESONANCES
See BARYONS

BARYONS
See also CHARMED BARYONS
DIBARYONS
HYPERONS
N*BARYONS
NUCLEONS
Clusters in the nuclear model of chiral field solitons, 17:32235 (RA;SU)

BATTERIES (ELECTRIC)
See ELECTRIC BATTERIES

BAUXITE
Mechanism of surface enrichment and adhesion of coal combustion particulates: Second quarterly report, September 1987, 17:30549 (R;US)

BEAM BUNCHING
A simple model for SLC positron stability issues, 17:31464 (R;US)
Focusing characteristics of an accelerating structure with noncircular beam holes, 17:31460 (R;FR)
Prompt bunch by bunch synchrotron oscillation detection via a fast phase measurement, 17:31497 (RA;JP)
Recent improvements and new possibilities of the Ganil facility, 17:31432 (R;FR)

BEAM DYNAMICS
See also BEAM BUNCHING
BEAM-BEAM INTERACTIONS
BETATRON OSCILLATIONS
SYNCHROTRON OSCILLATIONS
Alternating-phase focusing: A model to study nonlinear dynamics, 17:31445 (R;US)
Comparison of computational methods and results concerning the simulation of IH structures with the codes LORAS and DYNAC, 17:31452 (R;FR)
Topics on RF beam control of a synchrotron, 17:31449 (R;US)

BEAM EXTRACTION
Calculation of the beam extraction system from the U-120K cyclotron, 17:31489 (R;SU;In Russian)

BEAM INJECTION
See also ION BEAM INJECTION
An engineering upgrade of the CWDD injector, 17:31472 (R;US)
Design study of a 1 MV, 4 A, D- test bed in european community, 17:32443 (R;FR)
Dione status report, 17:32275 (R;FR)
Recent improvements and new possibilities of the Ganil facility, 17:31432 (R;FR)
Rf beam loading in the Brookhaven AGS with booster injection, 17:31478 (R;US)

BEAM MONITORING
Beam position monitor using a reentrant coaxial cavity, 17:31496 (RA;JP)

BEAM MONITORS
A non interceptive heavy ion beam profile monitor based on residual gas ionization, 17:31484 (R;FR)
Longitudinal impedance of capacitive pick-up electrodes: Calculations and comparison with measurements, 17:31474 (R;US)

BEAM POSITION
Log-ratio beam position monitoring at 425 MHz, 17:31510 (R;US)

BEAM PROFILES
Image processing and computer controls for video profile diagnostic system in the ground test accelerator (GTA), 17:31506 (R;US)

BEAM STRIPPERS
Dione status report, 17:32275 (R;FR)

BEAM TRANSPORT
Commissioning of the Ground Test Accelerator Intertank Matching Section, 17:31513 (R;US)

BEAM WIDTHS
See BEAM PROFILES

BEAM-BEAM INTERACTIONS
Beam-beam diagnostics from closed-orbit distortion, 17:31465 (R;US)
The accuracy of beam-beam diagnostics for circular colliders, 17:31466 (R;US)
Tune spread due to magnetic multipoles in RHIC, 17:31447 (R;US)

BEAM-FOIL SPECTROSCOPY
See ION SPECTROSCOPY

BEAM-GAS SPECTROSCOPY

BEAMS
See also CLUSTER BEAMS
COLLIDING BEAMS
ION BEAMS
MOLECULAR BEAMS
PHOTON BEAMS
POLARIZED BEAMS
Proceedings of the international conference on evolution in beam applications, 17:30789 (I;JP)

BEAUTY MESONS
Beauty physics-CKM matrix, 17:32174 (R;FR;In French)

BEAUTY PARTICLES
See also B MESONS
BEAUTY MESONS
Heavy flavour physics at LEP, 17:32170 (R;FR)

BELL INEQUALITY
See BELL THEOREM

BELL THEOREM
Bell-type experiments and the concept of locally stochastic causality, 17:32046 (R;NO)

BELLOWS
ASST Interconnect Region single phase pressure tests, 17:31528 (R;US)

BENCHMARKS
- LFK: Livermore FORTRAN kernel computer test, 17:32527 (CM;US)
- SWEB: Scientific Workstation Evaluation Benchmark, 17:32523 (CM;US)

BENTONITE
- Sealing performance of bentonite and bentonite/crushed rock borehole plugs, 17:30710 (R;US)
- Swelling pressure, water uptake, and permeability of 70/30 crushed salt/bentonite, 17:30721 (R;US)

BENZENE
- Novel technique for coal pyrolysis and hydrogenation product analysis: Quarterly report, January 1991–March 1991, 17:30437 (R;US)

BETA BEAMS (ELECTRONS)
- *See* ELECTRON BEAMS

BETA BEAMS (POSITRONS)
- *See* POSITRON BEAMS

BETA PARTICLES
- A model for electron and beta energy deposition within trabecular bone, 17:31895 (RA;US)

BETATRON OSCILLATIONS
- Linear synchro-betatron resonances, driven by beam-beam interaction, 17:31532 (R;SU)
- The z-transform application for solving the problem of free beam oscillation damping in the accelerator, 17:31456 (R;SU;In Russian)
- Theoretical treatment of a classical transverse feedback system using Z-transform, 17:31455 (R;SU)

BETATRONS
- Tandem betatron, 17:31439 (PA;US)

BETHE-SALPETER EQUATION
- Numerical method of solution of a boundary value problem for the coupled integro-differential equations (The Bethe-Salpeter equation), 17:32037 (R;SU;In Russian)

BINARY ALLOY SYSTEMS
- Calculation of binary phase diagrams between the actinide elements, rare earth elements, and transition metal elements, 17:31238 (R;US)
- Chemistry and Materials Science progress report, first half FY 1992: Weapons-Supporting Research and Laboratory Directed Research and Development, 17:31243 (R;US)
- Ingot homogenization, 17:31217 (R;US)

BIOASSAY
- The establishment of a national calibration centre for practical standards for bioassay and in vivo monitoring, 17:31954 (IA;CA)

BIOCENOSES
- *See* ECOSYSTEMS

BIOCHEMICAL ACTIVITY
- *See* BIOCHEMISTRY

BIOCHEMISTRY
- A physico-chemical study of some areas of fundamental significance to biophysics: Annual report, 1991–1992, 17:31760 (R;US)
- A physico-chemical study of some areas of fundamental significance to biophysics: Three-year comprehensive report, 1989–1992, 17:31761 (R;US)

BIODEGRADATION
- Effects of lag and maximum growth in contaminant transport and biodegradation modeling, 17:31727 (R;US)
- Three-dimensional bioremediation modeling in heterogeneous porous media, 17:31728 (R;US)

BIOGAS

BIOMASS
- Conductivity measurements on dolomite at reaction conditions, 17:30804 (R;SE)
- Electricity from biomass: A development strategy, 17:30801 (R;US)
- Growing energy: A national economy analysis of energy from arable land, 17:30811 (R;SE;In Swedish)

BIOMASS CONVERSION PLANTS
- Report on technical measurements concerning measurement of the suction of tanks at Fangel biomass conversion plant, 17:30803 (I;DK;In Danish)

BIOMASS PLANTATIONS
- Biomass fuels - effects on the carbon dioxide budget, 17:30813 (R;SE)

BIOMEDICAL RADIOGRAPHY
- Risk assessment - benefit in scanning medical examination for early detection of breast cancer by means of mammography, 17:31927 (RA;IL;In Hebrew)

BIOPHYSICS
- A physico-chemical study of some areas of fundamental significance to biophysics: Annual report, 1991–1992, 17:31760 (R;US)
- A physico-chemical study of some areas of fundamental significance to biophysics: Three-year comprehensive report, 1989–1992, 17:31761 (R;US)

BIOREACTORS
- Simulation of bioreactors: A literature review, 17:30800 (R;FI)

BISMUTH 209 TARGET
- The α-decay properties of light uranium isotopes, 17:32244 (R;US)

BISMUTH OXIDES
- Activation energy and critical current density in Bi-Sr-Ca-Cu-O, 17:31247 (R;US)
- Flux creep in fluorine-doping Bi-Pb-Sr-Ca-Cu-O bulk superconductor, 17:32384 (R;CN;In Chinese)
- Magnetic behavior of a $Bi_2Sr_2Ca_1Cu_2O_x$ single crystal by direct magneto-optical observations, 17:31259 (R;US)
- Transport and magnetization currents in BSCCO/Ag tapes, 17:32391 (R;US)

BITTER SPAR
- *See* DOLOMITE

BITUMENS
- Utilizing asphaltene pyrolysis to predict pyrolysis kinetics of heavy crude oil and extractable native bitumen, 17:30603 (R;US)

BITUMINOUS COAL
- ^{31}P NMR analysis of coal moieties bearing -OH, -NH and -SH functions: Quarterly report, January 1, 1990–March 31, 1990, 17:30468 (R;US)
- ^{31}P NMR analysis of coal moieties bearing -OH, -NH, and -SH functions: Quarterly report, January 1, 1991–March 31, 1991, 17:30466 (R;US)
- ^{31}P NMR analysis of coal moieties bearing -OH, -NH, and -SH functions: Quarterly report, October 1, 1990–December 31, 1990, 17:30467 (R;US)
- ^{31}P NMR analysis of coal moieties bearing -OH, -NH, and -SH functions: Quarterly report, June 1, 1991–August 31, 1991, 17:30465 (R;US)
- An EPR spin probe method for characterizing changes in the accessible regions of coal upon oxidation, 17:30461 (R;US)
- Formation and retention of methane in coal: Final report, 17:30470 (R;US)
- Molten iron oxysulfide as a superior sulfur sorbent: Technical progress report, December 1, 1990–February 28, 1991, 17:30477 (R;US)
- Molten iron oxysulfide as a superior sulfur sorbent: Technical progress report, September 1, 1989–March 1, 1990, 17:30481 (R;US)
- Molten iron oxysulfide as a superior sulfur sorbent: Third quarter technical progress report, June 1–August 31, 1990, 17:30476 (R;US)

Sulfur removal from high-sulfur Illinois coal by low-temperature perchloroethylene (PCE) extraction: Technical report, December 1, 1991–February 29, 1992, 17:30458 (R;US)
The floatability of mineral and coal pyrite, 17:30423 (RA;US)

BLACK SHALES
Horizontal Devonian shale well, Columbia Natural Resources, Inc.'s, Pocohontas Development Corp. Well 21747, Martin County, Kentucky: Final report, 17:30589 (R;US)

BLADDER
Contrast-enhanced computed tomography of the primary tumor in muscle invasive carcinoma of the urinary bladder, 17:31851 (I;NO)
Point-pair distributions for internal dosimetry, 17:31897 (RA;US)
Radiation dosimetry for Tc-99m MAG3 in adults and children, 17:31903 (RA;US)

BLADES (TURBINES)
See TURBINE BLADES

BLANKETS (BREEDING)
See BREEDING BLANKETS

BLAST FURNACES
Model for blast furnace on-line simulation. Part 4: Application of the model to prediction, 17:31198 (R;FI)

BLOOD
See also BLOOD CELLS
BLOOD PLASMA
Absorbed dose calculations to blood and blood vessels for internally deposited radionuclides, 17:31891 (RA;US)
Determination of neutron dose from criticality accidents with bioassays for Na-24 and P-32, 17:31993 (RA;US)
Pb-210 concentrations in the blood of ground workers and underground miners of zinc-lead mine, 17:31950 (IA;CA)

BLOOD CELLS
See also BLOOD PLATELETS
ERYTHROCYTES
LEUKOCYTES
The disbalance of microelements in the blood of irradiated animals and its normalization with ceruloplasmin, 17:31983 (R;UA;In Russian)

BLOOD PLASMA
The disturbance of micro element exchange in different blood of animals irradiated by different radiation sources, 17:31984 (RA;UA;In Russian)

BLOOD PLATELETS
Effects of ^{60}Co γ-ray irradiation on human platelets, 17:31871 (R;CN;In Chinese)
Quantitation of comparative thrombogenicity of dog, pig and human platelets (PLT) in a hemodialyzer (HD), 17:31840 (RA;US)
Quantitation of thrombogenicity of technetium-99M and indium-111 labeled canine platelets (PLT) in a hemodialyzer (HD), 17:31839 (RA;US)

BLOOD VESSELS
Absorbed dose calculations to blood and blood vessels for internally deposited radionuclides, 17:31891 (RA;US)
Effect of ^{60}Co radiation on the fibrinolysis and anticoagulation of endothelial cells, 17:31868 (R;CN;In Chinese)

BLUE-GREEN ALGAE
See CYANOBACTERIA

Cleavage and crosslinking of polymeric coal structures during pyrolysis: Final report, 17:30435 (R;US)
Quantitative Chemical Analysis
Concentration of light homologs of superheavy elements in coal combustion, 17:31724 (R;SU;In Russian)
Staged Combustion
Formation and destruction of nitrogen oxides in coal combustion: Second quarterly report, April 1, 1988–June 30, 1988, 17:30544 (R;US)
Structural Chemical Analysis
^{31}P NMR analysis of coal moieties bearing -OH, -NH, and -SH functions: Final technical report, 17:30469 (R;US)
Supply and Demand
Short-term energy outlook: Quarterly projections, Third quarter 1992, 17:31066 (R;US)
Swelling
A new model of coal-water interaction and relevance for dewatering: Quarterly technical progress report, December 1, 1991–February 28, 1992, 17:30425 (R;US)
Viscosity
Coal plasticity at high heating rates and temperatures: Second technical progress report for the third quarter 1990, 17:30440 (R;US)
Water Removal
A new model of coal-water interaction and relevance for dewatering: Quarterly technical progress report, December 1, 1991–February 28, 1992, 17:30425 (R;US)
Wetting Heat
A new model of coal-water interaction and relevance for dewatering: Quarterly technical progress report, December 1, 1991–February 28, 1992, 17:30425 (R;US)
COAL FINES
Carbonation as a binding mechanism for coal/calcium hydroxide pellets: Technical report, December 1, 1991–February 29, 1992, 17:30426 (R;US)
Combustion characterization of the blend of plant coal and recovered coal fines: Technical report, December 1, 1991–February 29, 1992, 17:30552 (R;US)
Research and development for storage, transport, and handling of coal-based fuels: Final report, 17:30537 (R;US)
COAL GAS
Desulfurization of hot fuel gas produced from high-chlorine Illinois coals: Technical report, December 1, 1991–February 29, 1992, 17:30459 (R;US)
COAL GASIFICATION
Application of integrated codes, 17:30434 (RA;US)
Mild coal gasification: Product separation, 17:30460 (R;US)
Submodel development and evaluation, 17:30432 (RA;US)
COAL LIQUEFACTION
See also LIQUID PHASE METHANOL PROCESS
Direct coal liquefaction baseline design and system analysis: Quarterly report, May–August 1990, 17:30446 (R;US)
Direct coal liquefaction baseline design and system analysis: Quarterly report, September–December 1990, 17:30445 (R;US)
Direct coal liquefaction baseline design and system analysis: Quarterly report, October–December 1991, 17:30442 (R;US)
Direct coal liquefaction baseline design and system analysis: Quarterly report, January–March 1991, 17:30444 (R;US)
Direct coal liquefaction baseline design and system analysis: Quarterly report, April–June 1991, 17:30443 (R;US)
Enhancing low severity coal liquefaction reactivity using mild chemical pretreatment: Quarterly technical progress report, December 1991–February 1992, 17:30455 (R;US)
Microbial recovery of metals from spent catalysts: Quarterly report, January–March 1991, 17:30449 (R;US)
Microbial recovery of metals from spent catalysts: Quarterly report, July–September 1990, 17:30451 (R;US)
Microbial recovery of metals from spent catalysts: Quarterly report, September–December 1990, 17:30450 (R;US)
Microbial recovery of metals from spent coal liquefaction catalysts: Quarterly report, April–June 1991, 17:30448 (R;US)
Microbial recovery of metals from spent coal liquefaction catalysts: Quarterly report, July–September 1991, 17:30447 (R;US)
Mitigating crosslinking reactions through preconversion strategies: Quarterly progress report, 17:30457 (R;US)
Temperature-programmed liquefaction of low-rank coals in H-donor and non-donor solvents, 17:30431 (R;US)
The effect of selective absorption on coal conversion, October–December 1991, 17:30456 (R;US)
[Direct coal liquefaction baseline design and system analysis]: Quarterly status report, [December 23, 1991–March 15, 1992], 17:30441 (R;US)
COAL MINES
Energy and environment: transitions in Eastern Europe: Book of abstracts, 17:30485 (I;CS)
Monitoring of radiation exposure from different natural sources in Polish coal mines, 17:31722 (IA;CA)
COAL PREPARATION
Cyclic voltammetric study, 17:30422 (RA;US)
ESCA studies of particulate pyrite, 17:30471 (RA;US)
Electrochemical and flotation experiments involving particulate mineral and coal pyrite, 17:30424 (RA;US)
Selected characteristics of twelve clean coal technologies, 17:31070 (RA;US)
Technology descriptions and demonstrations, 17:30419 (RA;US)
The production of a premium solid fuel from Powder River Basin coal, 17:30421 (R;US)
COAL SEAMS
Formation and retention of methane in coal: Final report, 17:30470 (R;US)
Multi-strata exploration and production study, October 1,1989–September 24, 1992, 17:30588 (R;US)
COAL TAR
Cleavage and crosslinking of polymeric coal structures during pyrolysis: Final report, 17:30435 (R;US)
COAL-OIL MIXTURES
See COAL
FUEL SLURRIES
COASTAL WATERS
Coastal resuspension, 17:31684 (R;GB)

Wind energy calculations for Swedish coastal water conditions. Report nr 3, 17:30855 (R;SE;In Swedish)

COATED FUEL PARTICLES
An examination on the determination precision of uranium content in the HTGR fuel compacts, 17:30991 (R;JP;In Japanese)
Evaluation of MHTGR fuel reliability, 17:30904 (R;US)

COATINGS
Solid oxide fuel cell processing using plasma arc spray deposition techniques: Final report, 17:31083 (R;US)

COBALT
Heteropolyanions: Soluble precatalysts for quinoline hydrogenation, 17:30428 (R;US)

COBALT 57
Radioactivities induced in some LDEF samples (Long Duration Exposure Facility (LDEF)), 17:32251 (R;US)

COBALT ALLOYS
Summary of the 12th study meeting of hydrogen energy system, 17:30794 (I;JP;In Japanese)

COBALT COMPLEXES
Investigation on the gas-phase radiolysis of metal complexes, 17:31328 (R;JP;In Japanese)

COGENERATION
Cogeneration and beyond: The need and opportunity for high efficiency, renewable community energy systems, 17:31059 (R;US)

COILS (ELECTRIC)
See ELECTRIC COILS

COILS (MAGNETIC)
See MAGNET COILS

COKE-OVEN GAS
See COAL GAS

COLD FUSION
Measurements of excess heat from a Pons-Fleischmann type electrolytic cell using palladium sheet, 17:32432 (R;US)

COLD NEUTRONS
Calculation of a variant of the 'inelastic' adiabatic spin-flipper for cold neutrons, 17:32346 (R;SU;In Russian)

COLD TRAPS
Comparative analysis of quality assurance requirements for selected LMFBR components of classes 1, 2 and 3, 17:30912 (R;FR)

COLLECTOR PROPERTIES
See POROSITY

COLLECTOR PROPERTIES (ROCKS)
See POROSITY

COLLIDING BEAMS
Low frequency transverse resistive instability in the collider, 17:31467 (R;US)
The partial beam lifetime at RHIC due to Coulomb dissociation of the nucleus, 17:31448 (R;US)

COLLIERIES
See COAL MINES

COLLIMATORS
SPECT assay of radiolabeled monoclonal antibodies: Comprehensive progress report, September 1989–February 1992, 17:31778 (R;US)

COLLOIDS
See also FOAMS
GELS
Colloids in groundwater: Their mobilization, subsurface transport, and sorption affinity for toxic chemicals: Annual technical progress report, 17:31751 (R;US)

COLOGNE SPIRITS
See ETHANOL

COLON
See LARGE INTESTINE

COLORADO
Horizontal well site evaluations in eastern Ohio, eastern Colorado, and western Texas, 17:30591 (R;US)
Key wintertime meteorological features of the Grand Canyon and the Colorado Plateaus Basin, 17:31668 (R;US)

COLUMBIA RIVER
Analytical services - Pile area laboratories, 17:30984 (R;US)

COLUMNS (EXTRACTION)
See EXTRACTION COLUMNS

COMBINED GAS AND STEAM CYCLE POWER PLANTS
See COMBINED-CYCLE POWER PLANTS

COMBINED STEAM-POWER GENERATION
See COGENERATION

COMBINED-CYCLE POWER PLANTS
Selected characteristics of twelve clean coal technologies, 17:31070 (RA;US)
Technology descriptions and demonstrations, 17:30419 (RA;US)

COMBUSTION
See also FLUIDIZED-BED COMBUSTION
SPONTANEOUS COMBUSTION
STAGED COMBUSTION
A simulation model for time-dependent drying, devolatilization and combustion of a single solid fuel particle, 17:31376 (R;FI)
Studies in nonlinear problems of energy: Progress report, January 1, 1992–December 31, 1992, 17:31345 (R;US)

COMBUSTION KINETICS
A preliminary study of the effect of equivalence ratio on a low emissions gas turbine combustor using KIVA-II, 17:30866 (R;US)

COMBUSTORS
See also CYCLONE COMBUSTORS
FLUIDIZED-BED COMBUSTORS
A preliminary study of the effect of equivalence ratio on a low emissions gas turbine combustor using KIVA-II, 17:30866 (R;US)
Application of integrated codes, 17:30434 (RA;US)
Comprehensive model development and evaluation, 17:30433 (RA;US)
Structural analysis of thermal fatigue failures on rocket combustion chambers by the finite element method, 17:31407 (R;JP)
Technology descriptions and demonstrations, 17:30419 (RA;US)

COMMERCE (NUCLEAR)
See NUCLEAR TRADE

COMMINUTION
A simple method for separating fines from fuel chips, 17:30805 (R;SE;In Swedish)

COMMUNICATIONS
JINR rapid communications: Collection, 17:31570 (R;SU)

COMMUNITIES (ECOLOGICAL)
See ECOSYSTEMS

COMMUTATORS
Maximal reductions in the Baker-Hausdorff formula, 17:32044 (R;NO)

COMPLEXES
See also HETEROPOLYANIONS
HPLC studies of aquatic humic compounds and complexes from the Drigg research site, Cumbria, 17:30698 (R;FR)

COMPOSITE MATERIALS
Ductile fracture process of discontinuous fiber reinforced composites, 17:31272 (R;US)
Fabrication of high temperature materials by exothermic synthesis and subsequent dynamic consolidation, 17:31276 (PA;US)
Global-local finite element analysis of composite structures, 17:31277 (R;US)
Investigation of properties and performance of ceramic composite components, 17:31260 (R;US)
[High temperature fatigue crack growth in ceramics and ceramic composites]: [Annual report, August 1991–July 1992], 17:31255 (R;US)

COMPOUND NUCLEI
Mechanism of enhanced yield of light particles in compound nucleus formation: diffusion description, 17:32328 (R;SU)

DAUGHTER PRODUCTS
Rn gas level as an indicator to the radiological impact of Rn progeny, 17:31650 (IA;IL)
Study of the atmospheric chemistry of radon progeny in laboratory and real indoor atmospheres: Progress report, July 1, 1991–June 30, 1992, 17:31912 (R;US)

DEBRIS (NUCLEAR)
See FISSION PRODUCTS

DECANE
Measurements of cellular structure in spray detonation, 17:31158 (R;US)

DECAY
Characteristics of potential repository wastes: Volume 3, Appendix 3A, ORIGEN2 decay tables for immobilized high-level waste; Appendix 3B, Interim high-level waste forms, 17:31332 (R;US)

DECAY PRODUCTS
See DAUGHTER PRODUCTS

DECIMETER WAVE RADIATION (1-3 DM)
See RADIOWAVE RADIATION

DECIMETER WAVE RADIATION (3-10DM)
See RADIOWAVE RADIATION

DEFECTS
Nuclear reactor pressure vessel-specific flaw distribution development, 17:30900 (R;US)
Standards for burrs?, 17:31233 (R;US)

DEFORESTATION
Forest declines: Some perspectives on linking processes and patterns, 17:31749 (R;US)

DEFORMATION
VERTPAK1: Code verification analytic solution, 17:32528 (CM;US)

DEFORMED NUCLEI
Nuclear superdeformation at high spins, 17:32215 (R;FR)
DEGRADATION (NUCLEAR)
See DECAY
DELAYED NEUTRONS
Recent advances in the US fission yield and delayed neutron evaluations, 17:32339 (R;US)
DELETIONS (CHROMOSOMAL)
See CHROMOSOMAL ABERRATIONS
DELTA RESONANCES (BARYON)
See N*BARYONS
DELTA RESONANCES (MESON)
See MESONS
DENITRIFICATION
Quantum chemical methods of V_2O_5-TiO_2 catalysts, 17:31666 (R;SE;In Swedish, English)
Wetlands and lakes as nitrogen traps: Research programme for the period 1 July 1990 - 30 June 1994, 17:31758 (R;SE)
DENMARK
Natural-gas-fired cogeneration plants with an electric power output of up to 1000 kW: Technology - Environment - Economy, 17:31147 (I;DK;In Danish)
Plan for national nuclear emergency preparedness, 17:31986 (I;DK;In Danish)
Trends in international research, development, and demonstration of clean coal technologies, 17:30554 (RA;US)
DENSIMETERS
Model SM-1 ballast density gauge, 17:30783 (R;CN;In Chinese)
DENSITY
A method of noncontacting ultrasonic process monitoring, 17:31262 (PA;US)
DENSITY (PLASMA)
See PLASMA DENSITY
DEOXYCYTIDINURIA
See URINE
DEPARTMENT OF DEFENSE
See US DOD
DEPLETED URANIUM
Differences in 'in vitro' dissolution properties of settled and airborne uranium material, 17:31720 (IA;CA)
DEPLETION (NUCLEAR FUELS)
See BURNUP
DEPOSITS (GEOLOGICAL)
See GEOLOGIC DEPOSITS
DESERTRON
See SUPERCONDUCTING SUPER COLLIDER
DESORPTION
Ion desorption phenomena induced by various types of multiply charged projectiles and by photons on solid surfaces, 17:32378 (R;FR)
DESULFURIZATION
Confined zone dispersion flue gas desulfurization demonstration: Volume 1, Quarterly report No. 4, August 1, 1991–October 31, 1991, 17:30484 (R;US)
DETECTORS (RADIATION)
See RADIATION DETECTORS
DETONATION WAVES
Detonation reactions frozen by free expansion and analyzed by mass spectrometry, 17:31631 (R;US)
DETONATIONS
Detonation reactions frozen by free expansion and analyzed by mass spectrometry, 17:31631 (R;US)
Nonideal thermoequilibrium calculations using a large product species data base, 17:31635 (R;US)
DETONATORS
Advanced high-explosive flux compression generator development: The CN-III series, 17:31636 (R;US)
Development of a laser ignited all secondary explosive DDT detonator, 17:31632 (R;US)
Pilot process waste assessment for the fireset area, 17:31621 (R;US)
DETRITUS
The flux and recycling of bioactive substances in the surface sediments of the deep basins off southern California: Final report, 17:31695 (R;US)
DEUTERIUM OXIDE
See HEAVY WATER
DEUTERIUM-LITHIUM HIGH FLUX NEUTRON SOURCE FACILITY
See NEUTRON SOURCE FACILITIES
DEUTERON BEAMS
First results on D- production in the joint CEA-JAERI experiment at Cadarache, 17:32444 (R;FR)
DEUTERON REACTIONS
A possible interpretation of anomalous behaviour of proton spectrum at 0 deg from deuteron fragmentation at 9 GeV/c, 17:32330 (RA;SU;In Russian)
Observation of neutron bursts in saturation of titanium with deuterium by means of D_2O electrolysis, 17:32430 (R;SU)
DEUTERON-DEUTERON INTERACTIONS
See DEUTERON REACTIONS
DEUTERONS
Gottfried sum rule and mesonic exchanges in deuteron, 17:32112 (R;SU)
DEVELOPING COUNTRIES
See also EGYPTIAN ARAB REPUBLIC
IRAQ
ISRAEL
MOROCCO
PAKISTAN
POLAND
REPUBLIC OF KOREA
SYRIA
TURKEY
Minutes of Japan-US energy conference/Maui Meeting, 17:31052 (R;JP;In Japanese)
DEVOLATILIZATION
A simulation model for time-dependent drying, devolatilization and combustion of a single solid fuel particle, 17:31376 (R;FI)
DEVONIAN SHALES
See BLACK SHALES
DEWATERING EQUIPMENT
Energy savings with combination dryer, 17:31136 (R;FI;In Finnish)
DIAGRAMS
See also FEYNMAN DIAGRAM
Compilation of a gravity map on 1/500,000 Niigata sheet, 17:32009 (IA;JP;In Japanese)
Interim report of the results of research and development in Sunshine Project in FY1990.: Researches on the technologies of the geothermal resource evaluation of Japan, 17:30832 (I;JP;In Japanese)
DIAMOND COUNTERS
See CRYSTAL COUNTERS
DIAPHRAGMS (THERMONUCLEAR DEVICE)
See LIMITERS
DIBARYON RESONANCES
See DIBARYONS
DIBARYONS
Experimental Medium Energy Physics: Annual progress report, June 1991–May 1992, 17:32067 (R;US)
Experimental searches for narrow dibaryons, 17:32315 (R;FR)
Multiquark stable and metastable states, 17:32329 (RA;SU)
Two-nucleon production of hyperons in an S = −1 dibaryon search, 17:32274 (R;US)
DIELECTRIC TRACK DETECTORS
Electrochemical etching of fission fragment tracks in dielectric detectors for use in chemical experiments with transplutonium elements, 17:31302 (R;SU;In Russian)
Geologichal effectiveness of nuclear trace method in uranium prospecting, 17:31543 (I;CU;In Spanish)
DIESEL ENGINES
A study of the interaction of the flow field and the fuel jet in particulate formation as related to diesel engines: Quarterly technical progress report, April 15, 1989–July 14, 1989, 17:31153 (R;US)

A study of the interaction of the flow field and the fuel jet in particulate formation as related to diesel engines: Quarterly technical progress report, 14 July 1989–14 October 1989, 17:31154 (R;US)
A study of the interaction of the flow field and the fuel jet in particulate formation as related to diesel engines: Quarterly technical progress report, 14 October 1989–14 January 1990, 17:31155 (R;US)
A study of the interaction of the flow field and the fuel jet in particulate formation as related to diesel engines: Quarterly technical progress report, 14 July 1989–14 October 1989, 17:31154 (R;US)
Engineering evaluation of the General Motors (GM) diesel rating and capabilities, 17:31040 (R;US)
Impact of fuels on diesel exhaust emissions: A chemical and biological characterization, 17:30582 (R;SE)
Soot and fuel distribution imaging in a diesel engine, 17:31157 (R;US)
The diesel engine and its potential for improvement, 17:31156 (R;SE;In Swedish)
[A study of the interaction of the flow field and the fuel jet in particulate formation as related to diesel engines: Quarterly status report No. 7, January 15, 1989–April 15, 1989], 17:31152 (R;US)
[A study of the interaction of the flow field and the fuel jet in particulate formation as related to diesel engines: Sixth quarterly progress report, October 15, 1988–January 15, 1989], 17:31151 (R;US)

DIESEL MOTORS
See DIESEL ENGINES

DIETHYLENETRIAMINEPENTAACETIC ACID

MOLYBDATES
Microbial recovery of metals from spent catalysts: Quarterly report, January–March 1991, 17:30449 (R;US)
Microbial recovery of metals from spent catalysts: Quarterly report, July–September 1990, 17:30451 (R;US)
Temperature-programmed catalytic liquefaction of low rank coal using dispersed Mo catalyst, 17:30430 (R;US)

MOLYBDENUM
Heteropolyanions: Soluble precatalysts for quinoline hydrogenation, 17:30428 (R;US)
Microbial recovery of metals from spent catalysts: Quarterly report, January–March 1991, 17:30449 (R;US)
Microbial recovery of metals from spent catalysts: Quarterly report, July–September 1990, 17:30451 (R;US)
Microbial recovery of metals from spent catalysts: Quarterly report, September–December 1990, 17:30450 (R;US)
Microbial recovery of metals from spent coal liquefaction catalysts: Quarterly report, April–June 1991, 17:30448 (R;US)
Microbial recovery of metals from spent coal liquefaction catalysts: Quarterly report, July–September 1991, 17:30447 (R;US)
Silicide layer growth rates in Mo/Si multilayers, 17:31244 (R;US)
Sulfided heterogeneous, bimetallic RuMo catalysts derived from mixtures of $Ru_3(CO)_{12}$ (or $RuCl_3$) and a molybdenum heteropolyanion. The reactions of ethanol with tetrahydroquinoline, 17:30429 (R;US)

MOLYBDENUM 100
Nuclear transparency and double beta decay of molybdenum 100: Annual progress report, March 1, 1992–January 31, 1993, 17:32246 (R;US)

MOLYBDENUM 99
Extraction of molybdenum by the di-n-butyl 2.2.N.hydroxyhexanamide (tri-n-butylacetohydroxamic acid) from aqueous acidic media, 17:31290 (R;FR;In French)

MOLYBDENUM ORES
Multielemental gamma activation analysis of copper-molybdenum ores and its production of processing using microtron, 17:31301 (R;SU;In Russian)

MOLYBDENUM SILICIDES
Ductile phase toughening of molybdenum disilicide by low pressure plasma spraying, 17:31258 (R;US)

MONITORING (BEAM)
See BEAM MONITORING

MONITORING (RADIATION)
See RADIATION MONITORING

MONITORS
See also BEAM MONITORS
RADIATION MONITORS
Optical monitor for observing turbulent flow, 17:31612 (PA;US)

MONITORS (BEAM)
See BEAM MONITORS

MONITORS (RADIATION)
See RADIATION MONITORS

MONITORS (REACTOR)
See REACTOR CONTROL SYSTEMS

MONOCHROMATORS
Emittance, brilliance, and bandpass issues related to an inclined crystal monochromator, 17:31614 (R;US)

MONOCLONAL ANTIBODIES
A novel bifunctional chelating agent α,ϵ-N,N′-bis(L-cysteinyl)-L-lysine for radiolabeling of monoclonal antibodies with technetium-99m, 17:31827 (RA;US)

Behavior of various radiochemical species present in Tc-99m labeled monoclonal antibody preparations, 17:31811 (RA;US)

Evaluation of ^{99m}Tc labelled anti CEA monoclonal antibody in immunsupressed mice bearing human colorectal carcinoma xenografts, 17:31804 (RA;US)

Hepatic uptake of a radiolabeled monoclonal antibody is not receptor-mediated, 17:31803 (RA;US)

I-131 anti-Ama monoclonal antibody for radioimaging of atheromas, 17:31836 (RA;US)

Immunochemical, radiochemical and pharmacokinetic comparison of pepsin-, papain- and bromelain-generated F(ab$'$)$_2$ fragments of the breast carcinoma reactive monoclonal antibody 15A8, 17:31832 (RA;US)

Labeling and radioimmunoscintigraphic application of monoclonal antibodies with 131-I and 99m-Tc, 17:31834 (RA;US)

Preparation of bromine-77 labeled monoclonal anti-hPLAP antibody using chloramine-T, 17:31835 (RA;US)

Purification of radiolabeled monoclonal antibodies to angiotensin-converting enzyme significantly improves specificity and efficacy of its targeting into the lung, 17:31788 (RA;US)

Strategies for pharmacokinetic modeling of monoclonal antibody biodistribution in man, 17:31808 (RA;US)

MONOCRYSTALS

Investigation of the neutron diffraction anomaly and electrical behaviour of α-LiIO$_3$ single crystal under AC field, 17:31266 (R;CN;In Chinese)

MONOCYTES

The effects of ^{60}Co γ-ray irradiation on the cytoskeleton of mouse peritoneal macrophages and human peripheral blood monocytes in vitro, 17:31873 (R;CN;In Chinese)

MONTANA

The origin or the Archean Jardine iron formation-hosted lode gold deposit. Montana, 17:32014 (R;US)

MONTE CARLO METHOD

A shortcoming of NITAWL/BONAMI causing problems in KENO calculations, 17:32516 (R;NL)

Monte Carlo simulations in theoretical physic, 17:32018 (R;FR;In French)

MOON

Latent heat thermal energy storage for lunar oxygen production, 17:31042 (R;US)

RATLER: Robotic All-Terrain Lunar Exploration Rover, 17:31365 (R;US)

MOROCCO

Characterization of selected countries, 17:30555 (RA;US)

MORTALITY

Issues in risk assessment and modifications of the NRC health effects models, 17:31998 (R;US)

MTSE DEVICES

See MAGNETIC MIRRORS

MUCOPROTEINS

Targeting of macrophages for the scintigraphic evaluation of inflammatory lesions in a model of radio-induced inflammation in pigs, 17:31769 (R;FR)

MULLITE

Dislocation and pores in mullite from diphasic gels, 17:31273 (R;US)

MULTI-CHANNEL ANALYZERS

Multichannel recorder of transition processes in superconducting magnets, 17:31488 (R;SU;In Russian)

MULTI-ELEMENT ANALYSIS

Basic analysis of sugar cane lead and cane fields of an AIC, 17:31688 (I;CU;In Spanish)

MULTIPARTICLE SPECTROMETERS

Analysis of data from the HYPERON facility in experimental investigation of the inclusive production of K^0 and K^{*0}(892) mesons, 17:31577 (R;SU;In Russian)

MULTIPHASE FLOW

Numerical dispersion reduction by correction of mass flows. Application to the problem of hydrocarbon recovery by chemical processes, 17:30573 (R;FR;In French)

Steady-state cooling of a high-temperature superconducting motor, 17:32392 (R;US)

MULTIPLE PRODUCTION

Finite-size scaling in the multiparticle production, 17:32156 (R;FR)

Intermittency in the limit of a large number of correlated components, 17:32032 (R;SU;In Russian)

MULTIPLE SCATTERING

Running EGS4 on Unix workstations and personal computers, 17:31582 (RA;JP;In Japanese)

MULTIPROCESSING

See PARALLEL PROCESSING

MULTIPROCESSORS

See ARRAY PROCESSORS

MUNITIONS

See ORDNANCE

MUONS

Particle production and survival in muon acceleration, 17:32189 (R;US)

MUSCULAR TISSUE

See TISSUES

MUTAGENESIS

Modification of γ-induced mutagenesis in Ames test-strains: 1. Radioprotector effect on mutagenesis in Salmonella typhimurium, 17:31961 (RA;SU;In Russian)

Modification of γ-induced mutagenesis in Ames test-strains: 2. TAN effect on Salmonella typhimurium mutagenesis, 17:31962 (RA;SU;In Russian)

MUTATION FREQUENCY

Effect of durable γ-radiation on E.Coli, 17:31963 (RA;SU;In Russian)

MUTATIONS

See also CHROMOSOMAL ABERRATIONS
GENOME MUTATIONS

Photoreactivation of γ-induced premutations damages in Drosophila wild and phr$^-$ genotypes, 17:31977 (RA;SU;In Russian)

MYOCARDIUM

Dosimetry of ^{99m}Tc-P53, a new myocardial perfusion imaging agent, 17:31773 (RA;US)

Dynamic PET scanning and compartmental model analysis to determine cellular level radiotracer distribution in vivo, 17:31900 (RA;US)

In vivo distribution and dosimetry of Tc-99m MIBI in man, 17:31906 (RA;US)

N

N*BARYONS

Scaling effects and properties of Δ-isobar resonances, 17:32192 (IA;DE)

N*RESONANCES

See N*BARYONS

See US NIPER

NATIONAL REACTOR TESTING STATION

See IDAHO NATIONAL ENGINEERING LABORATORY

NATURAL CIRCULATION

See NATURAL CONVECTION

NATURAL CONVECTION

Experimental research on flow resistance in piping components under natural circulation condition, 17:31379 (R;CN;In Chinese)

Investigation on subcold boiling-induced hydrodynamic instability in a natural circulation system, 17:31380 (R;CN;In Chinese)

NATURAL GAS

Alternative automotive fuels in USA. Cost-, supply- and environmental aspects, 17:30585 (R;SE;In Swedish)

Cooperative research on the combustion characteristics of cofired desulfurized Illinois coal and char with natural gas: Technical report, December 1, 1991–February 29, 1992, 17:30551 (R;US)

Hydrogen Program Plan, FY 1993–FY 1997, 17:30793 (R;US)

Meeting future exhaust emissions standards using natural gas as a vehicle fuel: Lessons learned from the natural gas vehicle challenge '92, 17:31189 (R;US)
Methodological aspects of market study on residential, commercial and industrial sectors, of the Conversion Project for natural gas of existing network in Sao Paulo city, 17:30596 (IA;BR;In Portuguese)
Natural gas participation on brazilian demand supply of liquefied petroleum gas, 17:30597 (IA;BR;In Portuguese)
Pilot plant for sealed gas-storage facility at Graengesberg (Sweden), 17:30598 (R;SE;In Swedish)
Proceedings of the 3. international seminar on natural gas, 17:30595 (I;BR;In Portugese)
Record of proceedings: Conference on state regulation and the market potential for natural gas: Challenges and opportunities, 17:30593 (R;US)
Research needs on the natural gas field in Finland, 17:30592 (R;FI;In Finnish)
Short-term energy outlook: Quarterly projections, Third quarter 1992, 17:31066 (R;US)

NATURAL GAS DEPOSITS
Multi-strata exploration and production study, October 1,1989–September 24, 1992, 17:30588 (R;US)
Natural fracture systems studies, 17:30587 (R;US)
Unconventional gas systems analysis, 17:30590 (R;US)

NATURAL GAS DISTRIBUTION SYSTEMS
Natural gas monthly, July 1992, 17:30594 (R;US)

NATURAL GAS GATHERING SYSTEMS
See NATURAL GAS DISTRIBUTION SYSTEMS

NATURAL GAS INDUSTRY
Natural gas monthly, July 1992, 17:30594 (R;US)
Waste minimization in the oil and gas industries, 17:30578 (R;US)

NATURAL GAS WELLS
Horizontal Devonian shale well, Columbia Natural Resources, Inc.'s, Pocohontas Development Corp. Well 21747, Martin County, Kentucky: Final report, 17:30589 (R;US)
Horizontal well site evaluations in eastern Ohio, eastern Colorado, and western Texas, 17:30591 (R;US)
Multi-strata exploration and production study, October 1,1989–September 24, 1992, 17:30588 (R;US)
Unconventional gas systems analysis, 17:30590 (R;US)

NATURAL URANIUM
Distribution of natural uranium in Jiuquan ecological environment, 17:31689 (R;CN;In Chinese)

NAVAL PETROLEUM RESERVE
See US NAVAL PETROLEUM RESERVES

NEAR INFRARED RADIATION
The hydrophobic character of nonsulfide mineral surfaces as influenced by double-bond reactions of adsorbed unsaturated collector species: Progress report, 17:31295 (R;US)

NEGATONS
See ELECTRONS

NEGATRONS
See ELECTRONS

NEODYMIUM LASERS
Experimental program on the 20 TW laser system, 17:32394 (R;FR)

NEOPLASMS
See also CARCINOMAS
GLIOMAS
^{11}C-thymidine: An in-vivo tracer for cell proliferation, 17:31819 (RA;US)
A Monte Carlo simulation of boron neutron capture reactions in cells - Microdosimetric aspects, 17:31774 (RA;US)
Enhanced tumor imaging with PokeWeed Mitogen, 17:31820 (RA;US)
$Ga(NO_3)_3$ uptake by human-derived small cell lung cancer cells, 17:31789 (RA;US)
Health and dosimetry considerations in the ICRP 1990 formulation of effective dose, 17:31879 (RA;US)
I-131 anti-Ama monoclonal antibody for radioimaging of atheromas, 17:31836 (RA;US)
Intratumoral injection of 5-^{125}I-iodo-2′-deoxyuridine in patients with colon cancer, 17:31817 (RA;US)
Non-invasive imaging of histone4 mRNA transcription in mammary tumor with In-111 labeled aminohexyl oligonucleotide in a mouse model, 17:31821 (RA;US)
Preparation of bromine-77 labeled monoclonal anti-hPLAP antibody using chloramine-T, 17:31835 (RA;US)
Tumortropic metal-complexes at the crossroads between diagnosis and therapy - A radiopharmacologic reflection, 17:31783 (RA;US)

NEPTUNIUM
Measurement of total alpha activity of neptunium, plutonium, and americium in highly radioactive Hanford waste by iron hydroxide precipitation and 2-heptanone solvent extraction, 17:30714 (R;US)

NERVOUS SYSTEM DISEASES
Analysis of [F-18]-L-6-fluorodopa and metabolites in plasma for PET studies, 17:31845 (RA;US)

NETHERLANDS
Trends in international research, development, and demonstration of clean coal technologies, 17:30554 (RA;US)

NETWORKS (COMPUTER)
See COMPUTER NETWORKS

NEURAL NETWORKS
Neural network sensor fusion for security applications, 17:31628 (R;US)
Non-US artificial neural network research: FASAC special study, 17:32550 (R;US)

NEUTRINO OSCILLATION
On the problem of enhancement of neutrino oscillation in matter, 17:32165 (R;SU)

NEUTRINOS
Electromagnetic interactions and chirality flip of neutrinos in a thermal background, 17:32199 (R;FR)
Neutrino mass, 17:32202 (R;US)

NEUTRON ACTIVATION ANALYSIS
Application of the multi-element analysis by X-fluorescence and neutron activation to the characterization of an archaeological site, 17:31294 (R;FR;In French)
European Activation File for fusion: Presented at the International Conference on Nuclear Data for Science and Technology, Juelich, Federal Republic of Germany, 13-17 May 1991, 17:32216 (R;NL)

NEUTRON BEAMS
[A clinical trial of neutron capture therapy for brain tumors]: Technical progress report 1988, 17:31775 (R;US)
[A clinical trial of neutron capture therapy for brain tumors]: Technical progress report 1989, 17:31910 (R;US)

NEUTRON CAPTURE
See NEUTRON REACTIONS

NEUTRON CAPTURE THERAPY
Development study of a biological thermal neutron facility for the Petten BNCT project at the LFR, 17:31848 (R;NL)
Heat production by photons in the BNCT beam filter components in HB11 at the HFR, 17:31847 (R;NL)

NEUTRON DETECTION
Detection of neutrons by BaF_2 TAPS modules in relativistic heavy ion collisions, 17:31566 (IA;DE)

NEUTRON DETECTORS
See also HE-3 COUNTERS
Calibration correction factors for the Los Alamos neutron well, 17:31593 (RA;US)
Simulation of high level neutron coincidence counter, 17:30765 (R;US)
The use of ring ratios to detect sample differences in passive neutron counting, 17:30771 (R;US)
Waste crate counter design, 17:30708 (R;US)

NEUTRON DIFFRACTION
12th general conference of the condensed matter division of the E.P.S. V.16A., 17:32372 (I;CS)
Background modelling in Rietveld analysis, 17:31288 (R;US)
Influence of neutron spin orientation on Laue diffraction in a non-centrosymmetric crystal, 17:32380 (R;SU;In Russian)

NEUTRON DIFFUSION EQUATION
A discrete ordinates approximation to the neutron transport equation applied to generalized geometries, 17:30938 (R;US)

GRENADE: 3d multigp diffusion Green's function, 17:32529 (CM;RO)
The early days of the S_n method, 17:32352 (R;US)

NEUTRON DOSIMETRY
JENDL Dosimetry File, 17:32320 (R;JP)
Neutron metrology in the HFR: Steel irradiation R139-6551, 17:32451 (R;NL)
The research on the measuring method and equipment of fast neutron absorption dosimetry and international intercomparison, 17:31544 (R;CN;In Chinese)

NEUTRON ECONOMY
See NEUTRON FLUX

NEUTRON EMISSION
Application of a safeguards radiation measurement system to the screening of spent fuel assemblies for transport and storage, 17:30646 (R;US)
Comparison of double-differential neutron emission cross sections calculated from evaluated nuclear data libraries with experimental data, 17:32462 (R;US)

NEUTRON EVAPORATION
See NEUTRON EMISSION

NEUTRON FLUENCE
Neutron metrology in the HFR: Steel irradiation R139-587/588/589, 17:31226 (R;NL)

NEUTRON FLUX
AILMOE: X-section calc elastic scat resonances, 17:32541 (CM;US)

NEUTRON FLUX DENSITY
See NEUTRON FLUX

NEUTRON GUIDES
Production of the mirror foil for the ultracold neutron guides, 17:32351 (R;SU;In Russian)

NEUTRON MATTER
See NUCLEAR MATTER

NEUTRON REACTIONS
ABAREX: A neutron spherical optical-statistical model code, 17:32271 (R;US)
International evaluation cooperation task 1.1 : intercomparison of evaluated files for ^{52}Cr, ^{56}Fe, and ^{58}Ni: Presented at the International Conference on Nuclear Data for Science and Technology, Juelich, Federal Republic of Germany, 13-17 May 1991, 17:32284 (R;NL)
JENDL Dosimetry File, 17:32320 (R;JP)
Measurement of formation cross sections of short-lived nuclei by 14 MeV neutrons–F, Mg, Si, Ti, Cr, Ni, Ga, Rb, Sr, Ag, 17:32321 (R;JP)
The pre-equilibrium picture of nucleon radiative capture and the neutron-to-gamma competition: Presented at the International Conference on Nuclear Data for Science and Technology, Juelich, Federal Republic of Germany, 13-17 May 1991, 17:32283 (R;NL)
The sensitivity of statistical model capture calculations to model assumptions: Presented at the International Conference on Nuclear Data for Science and Technology, Juelich, Federal Republic of Germany, 13-17 May 1991, 17:32217 (R;NL)

NEUTRON SOURCE FACILITIES
Conceptual design summary, 17:30792 (R;US)
Fuel plate stability experiments and analysis for the Advanced Neutron Source, 17:30973 (R;US)

NEUTRON SOURCES
Analyses of the reflector tank, cold source, and beam tube cooling for ANS reactor, 17:30994 (R;US)
Measurement of the removal sechtion of biological protection concretes in the spectrum of an AmBe source, 17:32343 (I;CU;In Spanish)
Miniature neutron sources: Thermal neutron sources and their users in the academic field, 17:30781 (R;US)

NEUTRON SPECTRA
Neutron spectra in the energy range from 10^{-8} to hundreds of MeV measurement in hard scattered radiation fields, 17:32347 (R;SU;In Russian)

NEUTRON STARS
Are some of the luminous high-latitude stars accretion-powered runaways?, 17:32053 (R;US)
Neutron superfluid dynamics, 17:32057 (R;US)

NEUTRON TRANSPORT
A stochastic/deterministic method for transient, three-dimensional neutron transport, 17:32353 (R;US)
REMP1-PC computer code for optimization of radiation shields characteristics, 17:32344 (R;SU;In Russian)

NEUTRON TRANSPORT THEORY
A discrete ordinates approximation to the neutron transport equation applied to generalized geometries, 17:30938 (R;US)
APARNA2: 1-d integral neutron transport slab, 17:32531 (CM;IN)

NEUTRON-DEFICIENT ISOTOPES
Description of the Gamow-Teller β^+-decays and (n,p) transitions in spherical nuclei, 17:32250 (R;SU)

NEUTRON-RICH ISOTOPES
New mass measurements of neutron-rich nuclei near N=20*, 17:32234 (R;SU)

NEUTRONS

Institutt for Energiteknikk - Annual report 1991, 17:32493 (I;NO)

NOVA FACILITY
Recent Nova experimental results, 17:32478 (R;US)

NOVAE
^{22}Na and ^{26}Al production in nova outbursts, 17:32060 (R;US)
Nucleosynthesis in nova explosions, 17:32059 (R;US)
Ultraviolet studies of novae in the large magellanic cloud, 17:32058 (R;US)

NOVO VORONEZH-3 REACTOR
See WWER-3 REACTOR

NOXSO PROCESS
Technology descriptions and demonstrations, 17:30419 (RA;US)

NOZZLES
Interim report - Production Test MR-105-12 crossheader purge with chromic acid, 17:30986 (R;US)
Manufacturing technology of top nozzle and bottom nozzle in fuel assembly for nuclear power plant, 17:30883 (R;CN;In Chinese)

NRTS
See IDAHO NATIONAL ENGINEERING LABORATORY

NSRR REACTOR
Annual progress report on the NSRR experiments, 20: January 1988 through March 1989, 17:30992 (R;JP;In Japanese)
Pre-pulse irradiation examination, NSRR pulse irradiation and post-pulse irradiation examination of MH-2 fuel rod, 17:30896 (R;JP;In Japanese, English)

NUCLEAR ACCIDENTS
See ACCIDENTS

NUCLEAR ATTACKS
See NUCLEAR WEAPONS

NUCLEAR CONTROVERSY
See HUMAN POPULATIONS

NUCLEAR DAMAGE
The environmental effects of the nuclear accidents in Chernobylsk (1986) and in the Ural mountains, 17:30965 (RA;IL;In Hebrew)

NUCLEAR DATA COLLECTIONS
Communication of nuclear data progress: No.4(1990), 17:32204 (R;CN)
European Activation File for fusion: Presented at the International Conference on Nuclear Data for Science and Technology, Juelich, Federal Republic of Germany, 13-17 May 1991, 17:32216 (R;NL)
Proceedings of the 1991 symposium on nuclear data, 17:32210 (R;JP)

Proceedings of the specialists' meeting on high energy nuclear data, 17:32211 (R;US)
Short status report on EFF and EAF projects: Presented at the Topical Conference on Nuclear Data for Fusion Reactor Technology, NEANDC Meeting, Karlsruhe, October 22, 1991, 17:32453 (R;NL)

NUCLEAR EXPLOSIONS
See also THERMONUCLEAR EXPLOSIONS
Sensitivities of calculated residual stress to separation distances of two simultaneous events, 17:31641 (R;US)

NUCLEAR EXPLOSIVES
Automated dry powder dispenser for explosive components, 17:31640 (R;US)
Automated weapon disassembly, 17:31364 (R;US)

NUCLEAR FACILITIES
See also FUEL REPROCESSING PLANTS
NUCLEAR POWER PLANTS
RADIOACTIVE WASTE FACILITIES
SURPLUS NUCLEAR FACILITIES
A graded approach to safety documentation at processing facilities, 17:30764 (R;US)
Nuclear Security Systems Center, 17:30775 (R;US)

NUCLEAR FRAGMENTATION
Intermittency in the particle production and in the nuclear multifragmentation, 17:32132 (R;FR)
Measurement and analysis of charge partitions in nuclear disassembly, 17:32268 (R;FR)

NUCLEAR FRAGMENTS
See also HYPERNUCLEI
Finite size effects in the intermittency analysis of the fragment-size correlations, 17:32252 (R;FR)
Statistical emission of complex fragments from highly excited compound nucleus, 17:32279 (R;FR)

NUCLEAR FUEL ELEMENTS
See FUEL ELEMENTS

NUCLEAR FUELS
See also ALLOY NUCLEAR FUELS
SPENT FUELS
A new apparatus for continuous countercurrent flow of solids and liquids, 17:31124 (R;US)
Fuels Preparation Department monthly report, August 1960, 17:30988 (R;US)
ICPP custom dissolver explosion recovery, 17:30763 (R;US)
Simulation of liquid drop breakup behavior in a flow field using discrete element techniques, 17:31401 (R;US)

NUCLEAR INDUSTRY
Communicating science and energy in public-lessons from the real world, 17:31063 (R;US)
Radiological environmental quality assessment of the nuclear industry in China over the past 30 years, 17:30964 (R;CN;In Chinese)

NUCLEAR MATERIALS MANAGEMENT
An integrated methodology for sabotage vulnerability assessment, 17:30777 (R;US)

NUCLEAR MATTER
Coupling and decoupling of pions and deltas in nuclear matter, 17:32225 (IA;DE)
Hadronic gas models and equilibration in heavy ion collisions, 17:32295 (IA;DE)
Heavy-ion collisions and the nuclear equation of state: Progress report, August 15, 1991–March 1992, 17:32281 (R;US)
Kaon condensation in dense hadronic matter, 17:32227 (IA;DE)
Modifications of scalar and vector mesons in nuclear matter, 17:32226 (IA;DE)
Nuclear physics of hot dense matter, 17:32229 (R;FR)
Nucleus as a canonical ensemble, 17:32222 (IA;DE)
Phase-transitions in nuclear matter: Deconfinement of quarks and gluons?, 17:32220 (IA;DE)
Properties of the ρ-meson in dense nuclear matter, 17:32224 (IA;DE)
Response functions for infinite fermion systems with velocity dependent interactions, 17:32230 (R;FR)
The K^+ as a probe of nuclear medium effects, 17:32273 (R;US)
The modification of hadrons propagating in dense media, 17:32186 (R;FR)
The surface compression of nuclei in relativistic mean-field approach, 17:32232 (R;FR)
Two-loop corrections for nuclear matter in the Walecka model with form factors, 17:32223 (IA;DE)

NUCLEAR MEDICINE
National standards for diagnostic and therapeutic nuclides, 17:31884 (RA;US)
Use of a model for 3D image reconstruction, 17:31770 (R;FR;In French)

NUCLEAR PHYSICS
Department of Theoretical Physics. Annual Report 1989, 17:32209 (R;PL)
Experimental Medium Energy Physics: Annual progress report, June 1991–May 1992, 17:32067 (R;US)
North American radioactive beam initiatives, 17:31430 (R;US)
Section for nuclear physics and energy physics - Annual Report: January 1 - December 31, 1991, 17:32496 (R;NO)

NUCLEAR POWER
Nuclear power - status and development 1991/1992, 17:30925 (R;NO;In Norwegian)
What role can nuclear power play in mitigating global warming?, 17:32494 (R;SE)

NUCLEAR POWER PLANTS
Borssele Reactor
Studies on signal validation and sensor surveillance for in-core signals in NPP: Paper presented at the NEACRP Specialist Meeting on In-core Instrumentation and Reactor Core Assessment, Pittsburg, Pennsylvania, USA, 1-4 October 1991, 17:30961 (R;NL)
Computerized Control Systems
Advanced control room design review guidelines: Merging old and new, 17:30956 (R;US)
Installation and evaluation of a nuclear power plant operator advisor based on artificial intelligence technology: Interim progress report and second year development plan, 17:30957 (R;US)
Containment Systems
Proceedings of the fifth workshop on containment integrity, 17:31018 (R;US)
Data
World nuclear power plant capacity, 17:31048 (I;DE)
Emergency Plans
Emergency Response Resources guide for nuclear power plant emergencies: Revision 1, 17:31016 (R;US)
Meltdown
Gas blowthrough and flow quality correlations for use in the analysis of high pressure melt ejection (HPME) events, 17:31030 (R;US)
Planning
World nuclear power plant capacity, 17:31048 (I;DE)
Public Opinion
Communicating science and energy in public-lessons from the real world, 17:31063 (R;US)
Reactor Accidents
Organizational culture during the accident response process, 17:31000 (R;US)
Resources available for nuclear power plant emergencies under the Price-Anderson Act and the Robert T. Stafford Disaster Relief and Emergency Assistance Act, 17:31017 (R;US)
Reactor Components
A survey of fatigue monitoring in the nuclear power industry, 17:30941 (R;US)
Reactor Control Systems
Studies on signal validation and sensor surveillance for in-core signals in NPP: Paper presented at the NEACRP Specialist Meeting on In-core Instrumentation and Reactor Core Assessment, Pittsburg, Pennsylvania, USA, 1-4 October 1991, 17:30961 (R;NL)
Reactor Monitoring Systems
Radiation monitor system for nuclear power plants, 17:30955 (R;CN;In Chinese)
Reactor Operation
World nuclear power plant capacity, 17:31048 (I;DE)

Reactor Safety
Failure detection studies by layered neural network, 17:30959 (R;NL)
Risk Assessment
Aging data analysis and risk assessment: Development and demonstration study, 17:31024 (R;US)
Workshop on the use of PRA methodology for the analysis of reactor events and operational data: Proceedings, 17:31019 (R;US)
Safety
Report on the activities of the Czechoslovak Atomic Energy Commission in performing its function of State Surveillance over Nuclear Safety of Nuclear Facilities in 1991, 17:30892 (I;CS;In Czech)
Service Life
ASTM international symposium on small specimen test techniques and their applications to pressure vessel annealing and plant life extension, 17:30948 (R;US)
Valves
Aging and service wear of solenoid-operated valves used in safety systems of nuclear power plants: Volume 2, Evaluation of monitoring methods, 17:30947 (R;US)
NUCLEAR POWER STATIONS
See NUCLEAR POWER PLANTS
NUCLEAR REACTION KINETICS
Inclusion of fluctuations in BUU nuclear dynamics, 17:32254 (IA;DE)
N-body collisions in high-energy nuclear reactions, 17:32298 (IA;DE)
Relativistic transport equations from quantum field theory, 17:32255 (IA;DE)
NUCLEAR REACTIONS
See also COLD FUSION
HEAVY ION FUSION REACTIONS
NUCLEAR FRAGMENTATION
PHOTONUCLEAR REACTIONS
SPALLATION
THERMONUCLEAR REACTIONS
Comprehensive nuclear model calculations: Introduction to the theory and use of the GNASH code, 17:32269 (R;US)
NUCLEAR REACTORS

NUCLEAR SAFETY
See RADIATION PROTECTION
NUCLEAR SAFETY RESEARCH REACTOR (JAPAN)
See NSRR REACTOR
NUCLEAR STRUCTURE
Towards superdeformation in the quasicontinuum: microscopic view of the excited superdeformed bands and the corresponding level densities, 17:32214 (R;FR)
'Local' EMC effects and the J/ψ suppression, 17:32221 (IA;DE)
NUCLEAR THEORY
Institute for Nuclear Theory [annual report]: Program 6, Mesons and fields in nuclei, 30 September 1991–31 January 1992; Program 7, Fundamental interactions in nuclei, 1 February 1992–31 May 1992: Final report, 17:32207 (R;US)
Institute for Nuclear Theory annual report No. 2, 1 March 1991–29 February 1992, 17:32208 (R;US)
Investigations of the structure and electromagnetic interactions of few-body systems: Progress report, 1 August 1991–31 July 1992, 17:32205 (R;US)
Theoretical nuclear physics: Progress report, October 1, 1991–August 1, 1992, 17:32206 (R;US)
NUCLEAR TRADE
Communications received from certain Member States regarding guidelines for the export of nuclear material, equipment and technology: Nuclear-related Dual-use Transfers, 17:30766 (R;XA)
NUCLEAR TRANSMUTATION
See TRANSMUTATION
NUCLEAR WASTES
See RADIOACTIVE WASTES
NUCLEAR WEAPON TESTS
See NUCLEAR EXPLOSIONS
NUCLEAR WEAPONS
Atmospheric nuclear weapons test history narrated by carbon-14 in human teeth, 17:30761 (RA;US)
Automated weapon disassembly, 17:31364 (R;US)
Space nonweaponization. An urgent task for arms control, 17:31191 (R;CN;In Chinese)
Supercritical CO_2 cleaning for waste minimization, 17:31638 (R;US)
The Strategic Arms Reduction Treaty and its verification: Report No. 12, 17:31192 (R;US)
Transportation Systems Center, 17:30647 (R;US)
NUCLEI
See also DEFORMED NUCLEI
HEAVY NUCLEI
HYPERNUCLEI
The partial beam lifetime at RHIC due to Coulomb dissociation of the nucleus, 17:31448 (R;US)
NUCLEI (CELLS)
See CELL NUCLEI
NUCLEOGENESIS
See NUCLEOSYNTHESIS
NUCLEON ISOBARS

PATIENTS
Effective dose to the patient from radiopharmaceuticals calculated with the new ICRP tissue weighting factors, 17:31880 (RA;US)
Patients protection during diagnosis and therapy with ionizing radiation: ICRO recommendations, 17:31929 (RA;IL;In Hebrew)

PATTERN RECOGNITION
Artificial intelligence and neural networks applied to ion mobility spectrometry, 17:31304 (R;US)

PEACH BOTTOM-1 REACTOR
Characteristics of potential repository wastes: Volume 2, 17:30975 (R;US)
Characteristics of potential repository wastes: Volume 4, Appendix 4A, Nuclear reactors at educational institutions of the United States; Appendix 4B, Data sheets for nuclear reactors at educational institutions; Appendix 4C, Supplemental data for Fort St. Vrain spent fuel; Appendix 4D, Supplemental data for Peach Bottom 1 spent fuel; Appendix 4E, S, 17:30902 (R;US)

PEAT
Boilers
The corrosion on the surfaces of airpreheaters and electrostatic precipitators in peat-fired boilers, 17:30553 (R;FI;In Finnish)
Resource Assessment
Inventory of mires and peat resources in Simo. Part 2, 17:30509 (R;FI;In Finnish)
Inventory of mires and peat resources, Parkano, Western Finland. Part 1, 17:30504 (R;FI;In Finnish)
The mires and peat resources of the commune of Isokyroe and their potential use. Part 1, 17:30498 (R;FI;In Finnish)
The mires and peat resources of the commune of Pudasjaervi and their potential use. Part 7, 17:30497 (R;FI;In Finnish)
The mires and peat resources of the commune of Pudasjaervi and their potential use. Part 9, 17:30516 (R;FI;In Finnish)
The mires and peat resources of the commune of Pudasjaervi and their potential use. Part 8, 17:30510 (R;FI;In Finnish)
The mires and peat resources of the commune of Simo in 1985-1986 and their potential use, 17:30500 (R;FI;In Finnish)
The mires and peat resources of the commune of Suonenjoki and their potential use, 17:30490 (R;FI;In Finnish)
The mires and peat resources of the commune of Utajaervi and their potential use. Part 5, 17:30511 (R;FI;In Finnish)
The mires and peat resources of the commune of Utajaervi and their potential use. Part 4, 17:30499 (R;FI;In Finnish)
The mires and their peat resources in Jaeppilae: Part 2 and summary, 17:30494 (R;FI;In Finnish)
The mires and their peat resources in Liminka, Lumijoki and Temmes, 17:30507 (R;FI;In Finnish)
The mires and their peat resources in Nilsiae, 17:30505 (R;FI;In Finnish)
The mires and their peat resources in Oulainen, 17:30489 (R;FI;In Finnish)
The mires and their peat resources in Outokumpu. Part 1, 17:30508 (R;FI;In Finnish)
The mires and their potentialities in peat production in the municipality of Ilomantsi, 17:30513 (R;FI;In Finnish)
The mires and their resources in Kiuruvesi, 17:30492 (R;FI;In Finnish)
The peat recources of Ylaemaa and their usefulness, 17:30501 (R;FI;In Finnish)
The peat resources and their potential use in Kihnioe, Western Finland, 17:30506 (R;FI;In Finnish)
The peat resources of Aehtaeri and their potential use. Part 1, 17:30495 (R;FI;In Finnish)
The peat resources of Aehtaeri and their potential use. Part 2, 17:30517 (R;FI;In Finnish)
The peat resources of Hankasalmi and their usefulness. Part 1, 17:30502 (R;FI;In Finnish)
The peat resources of Kuortane and their potential use, 17:30512 (R;FI;In Finnish)
The peat resources of Miehikkaelae and their usefulness, 17:30487 (R;FI;In Finnish)
The peat resources of Toeysae and their potential use, 17:30515 (R;FI;In Finnish)
The peat resources of seven peat deposits in the commune of Lestijaervi in Western Finland, 17:30493 (R;FI;In Finnish)
The peat resources of seventeen peat deposits in the commune of Kannonkoski in Central Finland, 17:30514 (R;FI;In Finnish)
The peat resources of seventeen peat deposits in the commune of Reisjaervi in Western Finland, 17:30503 (R;FI;In Finnish)
The peat resources of the municipality of Ilomantsi and their potentialities in fuel peat production. Part 1, 17:30496 (R;FI;In Finnish)
The peat resources of the municipality of Juuka and their potentialities in fuel peat production. Part 1, 17:30488 (R;FI;In Finnish)
Utilization of ADP in peat inventory and research, 17:30491 (R;FI;In Finnish)

RADIOPHARMACEUTICALS

Biochemical Reaction Kinetics
- Behavior of various radiochemical species present in Tc-99m labeled monoclonal antibody preparations, 17:31811 (RA;US)
- Effect of stereoisomers (d,l and meso) of Tc-99m HMPAO on ligand exchange and binding with hemoglobin: Comparison with In-111 tropolone, 17:31921 (RA;US)
- Evaluation of metyrapone as a radiotracer for SPECT, 17:31846 (RA;US)
- Immunochemical, radiochemical and pharmacokinetic comparison of pepsin-, papain- and bromelain-generated $F(ab')_2$ fragments of the breast carcinoma reactive monoclonal antibody 15A8, 17:31832 (RA;US)
- Interaction of triazolam with central type benzodiazepine receptors studied in living baboons using positron emission tomography, 17:31798 (RA;US)
- Intrinsic efficacies of benzodiazepine receptor ligands evaluated in vivo by positron emission tomography in the primate brain, 17:31799 (RA;US)
- Pharmacokinetics of an anti-CEA antibody radiolabeled with ^{111}In via DTPA and with ^{99m}Tc via two direct labeling methods: A comparison in patients, 17:31831 (RA;US)
- Quantification of ^{76}Br-bromolisuride binding to central dopamine D2 receptors studied in baboon by PET, 17:31797 (RA;US)
- Tc^{99m}-LDL as tracer for LDL-receptor mediated processes, 17:31802 (RA;US)

Biological Localization
- Improved localization of tumor with streptavidin and labeled biotin as a substitute for antibody, 17:31830 (RA;US)
- Mitochondrial and sarcolemmal membrane potentials determine accumulation of the R and S stereoisomers of the technetium isonitrile complex $Tc(CNCH(CH_2CH_3)CH_2OCH_3)_6^+$, 17:31822 (RA;US)
- Purification of radiolabeled monoclonal antibodies to angiotensin-converting enzyme significantly improves specificity and efficacy of its targeting into the lung, 17:31788 (RA;US)
- Quantitation of comparative thrombogenicity of dog, pig and human platelets (PLT) in a hemodialyzer (HD), 17:31840 (RA;US)
- Quantitation of thrombogenicity of technetium-99M and indium-111 labeled canine platelets (PLT) in a hemodialyzer (HD), 17:31839 (RA;US)
- Radioiodinated phospholipid ether analogs as noninvasive tumor imaging agents, 17:31784 (RA;US)
- Technetium labelled somatostatin a potential agent for in vivo tumor localization, 17:31791 (RA;US)

Calibration Standards
- National standards for diagnostic and therapeutic nuclides, 17:31884 (RA;US)

Chemical Preparation
- ^{188}Re-EDTMP,, ^{188}Re-MDP, ^{188}Re-DMSA - The radiochemistry and radiopharmacology of the new potentially useful therapeutical agents, 17:31792 (RA;US)
- A new approach to localize sites of inflammation using streptavidin and biotin – an improvement over nonspecific polyclonal IgG, 17:31838 (RA;US)
- A novel bifunctional chelating agent α,ε-N,N′-bis(L-cysteinyl)-L-lysine for radiolabeling of monoclonal antibodies with technetium-99m, 17:31827 (RA;US)
- A simple method for producing a technetium-99m-labeled liposome which is stable in vivo, 17:31815 (RA;US)
- Biological evaluation of selected carbohydrate antibody conjugates, 17:31833 (RA;US)
- Comparison of methods for incorporating a radioiodinated residualizing cholesteryl ester analog into low density lipoprotein, 17:31812 (RA;US)
- Complexes of technetium-99m with phosphomycine obtained by pH shifting: Biological characteristics, whole-body autoradiography, Γ-camera study, 17:31828 (RA;US)
- I-131 anti-Ama monoclonal antibody for radioimaging of atheromas, 17:31836 (RA;US)
- In-111-acetylacetone-cyclodextrin inclusion complex: A new form of radiopharmaceutical, 17:31793 (RA;US)
- Mapping histone4 mRNA in pig brain with In-111 labeled antisense oligo-nucleotide by in-situ hybridization, 17:31801 (RA;US)
- Non-invasive imaging of histone4 mRNA transcription in mammary tumor with In-111 labeled aminohexyl oligonucleotide in a mouse model, 17:31821 (RA;US)

Pertechnetate solutions: Their history and the labelling of HM-PAO, 17:31790 (RA;US)
Preparation and biodistribution of Tc^{III}-N,N′-ethylenebis (acetylacetone thioiminato) bis (triphenylphosphine) complex, 17:31825 (RA;US)
Preparation of bromine-77 labeled monoclonal anti-hPLAP antibody using chloramine-T, 17:31835 (RA;US)
Production of no-carrier added Yttrium-86 for radio-immunoimaging using positron emission tomography (PET), 17:31844 (RA;US)
Radioarsenic labeled compounds: Synthesis and biological evaluation for potential application in nuclear imaging and therapy, 17:31772 (RA;US)
Radiopharmacology of new diiodo analogs of calichemicin fragment, 17:31800 (RA;US)
Synthesis and evaluation of radioiodinated cholesteryl ethers as lipoprotein probes, 17:31813 (RA;US)
Synthesis of tracers using automated radiochemistry and robotics: Progress report, April 1, 1992–July 31, 1992, 17:31331 (R;US)
Synthesis, pharmacokinetic and clinical studies of ^{131}I-MIBG prepared in Mexico, 17:31837 (RA;US)
Technetium-99m biguanide complexes: ^{99m}Tc-1,1-dimethylbiguanide, 17:31826 (RA;US)
The preparation and biodistribution of secondary Tc-HMPAO, 17:31779 (RA;US)

Chemical Properties
Pharmacological properties of lisuride radiolabeled derivatives used for in vivo imaging of D2 dopamine receptors, 17:31796 (RA;US)

Dosimetry
A new approach to radiopharmaceutical dose assessment, 17:31882 (RA;US)
An approach to cellular level dosimetry using compartmental model analysis and dynamic PET, 17:31901 (RA;US)
Biodistribution parameters and radiation absorbed dose estimates for radiolabeled human low density lipoprotein, 17:31892 (RA;US)
Biokinetics and dosimetry of Tc-99m HM-PAO in children, 17:31904 (RA;US)
Development and validation of a simple model for cellular and cell cluster dosimetry with practical application in targeted radionuclide therapy, 17:31907 (RA;US)
Dosimetry of ^{99m}Tc-P53, a new myocardial perfusion imaging agent, 17:31773 (RA;US)
Dosimetry of intrathecally administered radiopharmaceuticals, 17:31887 (RA;US)
Effective dose to the patient from radiopharmaceuticals calculated with the new ICRP tissue weighting factors, 17:31880 (RA;US)
External beam and radioimmunotherapy dosimetry comparison of colorectal xenografts, 17:31883 (RA;US)
In vivo distribution and dosimetry of Tc-99m MIBI in man, 17:31906 (RA;US)
Radiation dosimetry for Tc-99m MAG3 in adults and children, 17:31903 (RA;US)
SPECTDOSE: A computerized radiation dosimetry methodology for use with radiolabeled antibodies using quantitative SPECT, 17:31898 (RA;US)
Special aspects of positron dosimetry, 17:31899 (RA;US)
The interpretation of animal data in the calculation of doses from new radiolabeled compounds, 17:31881 (RA;US)

Evaluation
Enhanced tumor imaging with PokeWeed Mitogen, 17:31820 (RA;US)
Evaluation of ^{99m}Tc labelled anti CEA monoclonal antibody in immunsupressed mice bearing human colorectal carcinoma xenografts, 17:31804 (RA;US)
Evaluation of multiple-dose ^{153}Sm-EDTMP for bone pain palliation in cancer patients, 17:31787 (RA;US)
Labeling, control and radiopharmaceutical evaluation of ^{99m}Tc-ADP as tumor seeking agent, 17:31818 (RA;US)
Synthesis and evaluation of technetium-99m monocationic mixed ligand complexes of phenyl substituted/condensed tetradentate Schiff's bases and trimethylphosphine, 17:31780 (RA;US)

Metabolism
Analysis of [F-18]-L-6-fluorodopa and metabolites in plasma for PET studies, 17:31845 (RA;US)
Clearance curve analysis of extravascularly distributed radiopharmaceuticals, 17:31809 (RA;US)
Effect of DTPA molecules conjugated to lysine residues on metabolism of I-125 and Tc-99m labeled T101, 17:31806 (RA;US)
Effect of stereoisomers (d,l and meso) of Tc-99m HMPAO on platelet kinetics in Beagle dogs: Comparison with In-111 labeled platelets, 17:31913 (RA;US)
Intratumoral injection of 5-^{125}I-iodo-2′-deoxyuridine in patients with colon cancer, 17:31817 (RA;US)
Preliminary studies on the metabolism of Tc-99m MAb-170, 17:31805 (RA;US)

Microdosimetry
A Monte Carlo simulation of boron neutron capture reactions in cells - Microdosimetric aspects, 17:31774 (RA;US)
Application of PET and compartmental modeling in estimation of cellular level microdosimetry: PET studies of I-124 labeled 3F8 MAb in human glioma, 17:31902 (RA;US)

Research Programs
Tumortropic metal-complexes at the crossroads between diagnosis and therapy - A radiopharmacologic reflection, 17:31783 (RA;US)

Retention
Comparative PMN granulocyte retention of In-111 and Tc-99m HMPAO labeled PMN granulocyte of dogs on cellulose acetate hemodialyzers (HD), 17:31841 (RA;US)
Comparative loss of In-111 labeled PMN granulocyte from dog, pig and man to cellulose acetate hemodialyzer (HD), 17:31842 (RA;US)

Specificity
Tumor-specific Y-90 species in solution for animal and human tumor therapy, 17:31786 (RA;US)

Stability
Coupling of ^{125}I-EGF to serum albumin to stabilize the radioiodine bond: Radiolabeling, purification by HPLC, stability and biodistribution in mice, 17:31829 (RA;US)
The stability in liver homogenate of In and Y anti-CEA antibody radiolabeled via DTPA and SCN-Bz-DTPA, 17:31807 (RA;US)

Structure-Activity Relationships
Indium-111 labelled cationic complexes of aminothiols. Structure-activity correlation, 17:31794 (RA;US)

Tissue Distribution
^{153}Sm-EDTMP and ^{99m}Tc-EDTMP - The radiopharmacology of two potential bone metastasis radiopharmaceuticals, 17:31914 (RA;US)
A model for electron and beta energy deposition within trabecular bone, 17:31895 (RA;US)
A new approach to localize sites of inflammation using streptavidin and biotin – an improvement over nonspecific polyclonal IgG, 17:31838 (RA;US)
A novel bifunctional chelating agent α,ε-N,N′-bis(L-cysteinyl)-L-lysine for radiolabeling of monoclonal antibodies with technetium-99m, 17:31827 (RA;US)
An animal model for radiopharmaceutical research (Didelphis albiventis) in HM-PAO-Tc-99m use, 17:31843 (RA;US)
Biodistribution parameters and radiation absorbed dose estimates for radiolabeled human low density lipoprotein, 17:31892 (RA;US)
Biological evaluation of selected carbohydrate antibody conjugates, 17:31833 (RA;US)
Complexes of technetium-99m with phosphomycine obtained by pH shifting: Biological characteristics, whole-body autoradiography, Γ-camera study, 17:31828 (RA;US)
Correlation of lipophilicity to biodistribution of Tc-99m labelled aminothiols, 17:31782 (RA;US)
Coupling of ^{125}I-EGF to serum albumin to stabilize the radioiodine bond: Radiolabeling, purification by HPLC, stability and biodistribution in mice, 17:31829 (RA;US)
Dynamic PET scanning and compartmental model analysis to determine cellular level radiotracer distribution in vivo, 17:31900 (RA;US)

Elevated brain uptake of ^{59} citrate: Correlation with the critical period of brain development in experimental phenylketonuria, 17:31920 (RA;US)
Enhancement of liver uptake of a radioiodinated triglyceride analog by prior incorporation into a lipoprotein-like emulsion, 17:31917 (RA;US)
From pure radionuclide species in solution through pure radiopharmaceuticals and simple radiopharmacology to disease-specific nuclear medicine, 17:31810 (RA;US)
Hepatic uptake of a radiolabeled monoclonal antibody is not receptor-mediated, 17:31803 (RA;US)
Labeling and radioimmunoscintigraphic application of monoclonal antibodies with 131-I and 99m-Tc, 17:31834 (RA;US)
Preparation and biodistribution of Tc^{III}-N,N′-ethylenebis (acetylacetone thioiminato) bis (triphenylphosphine) complex, 17:31825 (RA;US)
Radiopharmacological studies of ^{99m}Tc-CPI: Experience with isolated rat atrial tissue, 17:31823 (RA;US)
Radiopharmacological studies of a new functionalized isonitrile technetium complex: $[Tc(2\text{-ethoxy-}2\text{-methylpropylisonitrile})_6]^+$, 17:31824 (RA;US)
Radiopharmacology of inhaled Xe-133 in skeletal sites containing deposits of Gaucher cells, 17:31795 (RA;US)
Strategies for pharmacokinetic modeling of monoclonal antibody biodistribution in man, 17:31808 (RA;US)
Synthesis, pharmacokinetic and clinical studies of ^{131}I-MIBG prepared in Mexico, 17:31837 (RA;US)
Tc^{99m}-LDL kinetics in the isolated perfused rat liver, 17:31814 (RA;US)
Tc-99m-labeled adriamycin, 17:31781 (RA;US)
The preparation and biodistribution of secondary Tc-HMPAO, 17:31779 (RA;US)
Tissue distribution and biokinetics of radiolabeled proteins in rats with a focal infection, 17:31918 (RA;US)
Tissue localization of ^{125}I-Triiodothyronine in the periorbital area of mice: A microautoradiographic study, 17:31916 (RA;US)

Uptake
^{11}C-thymidine: An in-vivo tracer for cell proliferation, 17:31819 (RA;US)
$Ga(NO_3)_3$ uptake by human-derived small cell lung cancer cells, 17:31789 (RA;US)
Uptake of radiolabeled 1-(2-deoxy-2-fluoroarabinofuranosyl)-5-halouracils by experimental tumors in vivo, 17:31785 (RA;US)

RADIOPOLYMERIZATION
See POLYMERIZATION

RADIORESISTANCE

REACTOR COOLING SYSTEMS
REACTOR CORES
A survey of fatigue monitoring in the nuclear power industry, 17:30941 (R;US)
Aging data analysis and risk assessment: Development and demonstration study, 17:31024 (R;US)
Aluminum oxide film thickness and emittance, 17:31038 (R;US)
Comparison of European codes and standards on the welding of LMFBR components and proposals for their harmonization, 17:30913 (R;FR)
Experiments to investigate the effects of 1:10 scale Zion structures on direct containment heating (DCH) in the Surtsey Test Facility: The IET-1 and IET-1R tests, 17:30899 (R;US)

REACTOR CONTROL RODS
See CONTROL ELEMENTS

REACTOR CONTROL SYSTEMS
Failure detection studies by layered neural network, 17:30959 (R;NL)

REACTOR COOLING SYSTEMS
See also PRIMARY COOLANT CIRCUITS
SECONDARY COOLANT CIRCUITS
A model for calculation of RCS pressure during reflux boiling under reduced inventory conditions and its assessment against PKL data, 17:31008 (R;US)
An assessment of ^{238}Pu and $^{239+240}$Pu in the primary cooling water of a PWR, 17:30898 (R;DK)
Analyses of the reflector tank, cold source, and beam tube cooling for ANS reactor, 17:30994 (R;US)
Effluent versus inlet header break analysis for SRS-reactor LOPA scenario, 17:30950 (R;US)
Intergranular stress corrosion cracking: A rationalization of apparent differences among stress corrosion cracking tendencies for sensitized regions in the process water piping and in the tanks of SRS reactors, 17:30996 (R;US)

REACTOR CORES
Development and research of in-core transducers at IAE (Institute of Atomic Energy), 17:31606 (R;CN;In Chinese)
Impact of increasing MHTGR power on passive heat removal, 17:30903 (R;US)
Non-isotropic thermal behavior of an MHTGR fuel block: Impact upon reactivity feedback, 17:30901 (R;US)

REACTOR FUEL ELEMENTS
See FUEL ELEMENTS

REACTOR FUELS
See NUCLEAR FUELS

REACTOR INSTRUMENTATION
Aging assessment of reactor instrumentation and protection system components: Aging-related operating experiences, 17:31025 (R;US)
DOE Fundamentals Handbook: Instrumentation and Control, Volume 1, 17:30934 (R;US)
DOE Fundamentals Handbook: Instrumentation and Control, Volume 2, 17:30935 (R;US)

REACTOR LATTICE PARAMETERS
Calchulation of physical parameters of the subcritical assembly located in the higher Institute of Nuclear Sciences and Technology, 17:30939 (I;CU;In Spanish)

REACTOR LATTICE PITCH
See REACTOR LATTICE PARAMETERS

REACTOR LICENSING
Nuclear Regulatory Commission issuances, June 1992: Volume 35, No. 6, 17:30920 (R;US)

REACTOR MONITORING SYSTEMS
Radiation monitor system for nuclear power plants, 17:30955 (R;CN;In Chinese)

REACTOR OPERATORS
DOE Fundamentals Handbook: Classical Physics, 17:30926 (R;US)
DOE Fundamentals Handbook: Electrical Science, Volume 1, 17:30927 (R;US)
DOE Fundamentals Handbook: Electrical Science, Volume 2, 17:30928 (R;US)
DOE Fundamentals Handbook: Electrical Science, Volume 3, 17:30929 (R;US)
DOE Fundamentals Handbook: Electrical Science, Volume 4, 17:30930 (R;US)
DOE Fundamentals Handbook: Instrumentation and Control, Volume 1, 17:30934 (R;US)
DOE Fundamentals Handbook: Instrumentation and Control, Volume 2, 17:30935 (R;US)
DOE Fundamentals Handbook: Mathematics, Volume 1, 17:30936 (R;US)
DOE Fundamentals Handbook: Mathematics, Volume 2, 17:30937 (R;US)
DOE Fundamentals Handbook: Thermodynamics, Heat Transfer, and Fluid Flow, Volume 3, 17:30933 (R;US)
DOE Fundamentals Handbook: Thermodynamics, Heat Transfer, and Fluid Flow, Volume 1, 17:30931 (R;US)
DOE Fundamentals Handbook: Thermodynamics, Heat Transfer, and Fluid Flow, Volume 2, 17:30932 (R;US)

REACTOR PHYSICS
Nuclear Safety Research Department. Annual progress report 1991, 17:32500 (R;DK)
Status of the JEF and EFF projects: Presented at the International Conference on Nuclear Data for Science and Technology, Juelich, Federal Republic of Germany, 13-17 May 1991, 17:30940 (R;NL)

REACTOR SAFETY
Nuclear safety legislation and supervision in China, 17:30918 (R;CN)
Report on the activities of the Czechoslovak Atomic Energy Commission in performing its function of State Surveillance over Nuclear Safety of Nuclear Facilities in 1991, 17:30892 (I;CS;In Czech)
The standard molar enthalpies of formation of $BaSiO_3$(s) and Ba_2SiO_4(s), 17:30960 (R;NL)

REACTOR SITES
AISITE2: Parametric site requirement study, 17:32530 (CM;US)

REACTOR SITING
See SITE SELECTION

REACTOR VESSELS
Comparative analysis of quality assurance requirements for selected LMFBR components of classes 1, 2 and 3, 17:30912 (R;FR)
Most likely failure location during severe accident conditions, 17:31009 (R;US)
Nuclear reactor pressure vessel-specific flaw distribution development, 17:30900 (R;US)

REACTORS
See also POWER REACTORS
PROCESS HEAT REACTORS
PRODUCTION REACTORS
WATER COOLED REACTORS
Characteristics of potential repository wastes: Volume 2, 17:30975 (R;US)

REAGENTS
Oil recovery improvement through profile modification by thermal precipitation, 17:30570 (R;US)
RECIPROCAL TRANSLOCATIONS
See CHROMOSOMAL ABERRATIONS
RECOILS
Nucleon recoil polarization in quasi-elastic electron scattering with two-body currents, 17:32264 (RA;FR)
Study of few-body systems using recoil detection, 17:32262 (RA;FR)
RECOVERY (TRITIUM)
See TRITIUM RECOVERY
RECTUM
Evaluation of ^{99m}Tc labelled anti CEA monoclonal antibody in immunsupressed mice bearing human colorectal carcinoma xenografts, 17:31804 (RA;US)
External beam and radioimmunotherapy dosimetry comparison of colorectal xenografts, 17:31883 (RA;US)
Labeling and radioimmunoscintigraphic application of monoclonal antibodies with 131-I and 99m-Tc, 17:31834 (RA;US)
RECYCLE (FUEL)
See FUEL CYCLE
RECYCLING (FUEL)
See REPROCESSING
REFORMER PROCESSES
Development of catalysts for internal reforming in molten carbonate fuel cell, 17:31087 (R;SE)
REFRACTORIES
Combustion synthesis method and products, 17:31261 (PA;US)
REFRIGERANTS
CFC environmental problems and cooling technology, 17:31647 (R;DK;In Danish)
Evaporation of nonazeotropic mixture of refrigerants R143a and R124 flowing inside smooth and corrugated tubes, 17:31386 (R;US)
REFRIGERATING MACHINERY
Cryogenic refrigeration for Maglev requirements and opportunities, 17:31172 (RA;US)
He II and Maglev - Is there a role? (Magnetic levitation), 17:31173 (RA;US)
REFRIGERATION
New technologies for refrigeration without CFCs, 17:31133 (R;US)
REFRIGERATORS
Adaptive control of a refrigeration system: Feasibility analysis and controller design, 17:31098 (R;DK)
Trend in energy demand in factory air conditioning.: Analysis by a questionnaire of actual situation of air conditioning for cooling, 17:31130 (R;JP;In Japanese)
REFUSE
See SOLID WASTES
REFUSE-FUELED BOILERS
Physical modelling of a refuse fueled boiler, 17:30808 (R;SE;In Swedish)
Study of a MSW incinerator: Overall operation and on-site measurements in the fire box, 17:30809 (R;SE)
REGULATIONS
1992 Report on Hanford Site land disposal restrictions for mixed wastes, 17:30779 (R;US)
Approach to geologic repository post closure system performance assessment, 17:30722 (R;US)
Comparison of European codes and standards on the welding of LMFBR components and proposals for their harmonization, 17:30913 (R;FR)
REINFORCED MATERIALS
Ductile fracture process of discontinuous fiber reinforced composites, 17:31272 (R;US)
RELATIVE BIOLOGICAL EFFECTIVENESS
See RBE
RELATIVITY THEORY
Relativity theory in (2+2)-space, 17:32030 (R;SU)
RELEASE (FISSION PRODUCT)
See FISSION PRODUCT RELEASE
REMEDIAL ACTION
Applied research and development private sector accomplishments: FY90 contracts, 17:31061 (R;US)
Ecological effects of contaminants and remedial actions in Bear Creek, 17:31726 (R;US)
Line Program Environmental Management Audit: Formerly Utilized Sites Remedial Action Program, 17:32488 (R;US)
REMOTE HANDLING EQUIPMENT
Automated dry powder dispenser for explosive components, 17:31640 (R;US)
Automated weapon disassembly, 17:31364 (R;US)
RENEWABLE RESOURCES
Electricity from biomass: A development strategy, 17:30801 (R;US)
REPAIR (BIOLOGICAL)
See BIOLOGICAL REPAIR
REPROCESSING
See also PUREX PROCESS
ZIRFLEX PROCESS
Conceptual design of fixed bed burning system: A study of the head-end process for Th-U nuclear fuel cycle in HTGR, 17:30639 (R;CN;In Chinese)
REPUBLIC OF CHINA
See TAIWAN
REPUBLIC OF KOREA
Trends in international research, development, and demonstration of clean coal technologies, 17:30554 (RA;US)
RESEARCH PROGRAMS
LVIS-2000 and ETRR Future building services and energy-efficient buildings and building components: Evaluation of the research programmes 1988-1990, 17:31107 (R;FI)
RESEARCH REACTORS
See also ACPR REACTOR
FFTF REACTOR
HFR REACTOR
NSRR REACTOR
Analyses of the reflector tank, cold source, and beam tube cooling for ANS reactor, 17:30994 (R;US)
Characteristics of potential repository wastes: Volume 2, 17:30975 (R;US)
Characteristics of potential repository wastes: Volume 4, Appendix 4A, Nuclear reactors at educational institutions of the United States; Appendix 4B, Data sheets for nuclear reactors at educational institutions; Appendix 4C, Supplemental data for Fort St. Vrain spent fuel; Appendix 4D, Supplemental data for Peach Bottom 1 spent fuel; Appendix 4E, S, 17:30902 (R;US)
RESERVES
See also STRATEGIC PETROLEUM RESERVE
US NAVAL PETROLEUM RESERVES
Basic mapping for evaluation of prospective geothermal potential regions in the 1:500,000 topographic map 'Niigata', 17:30836 (IA;JP;In Japanese)
RESERVOIR ROCK
A pore-level scenario for the development of mixed-wettability in oil reservoirs, 17:30571 (R;US)
Analysis of reservoir heterogeneities due to shallowing-upward cycles in carbonate rocks of the Pennsylvanian Wahoo Limestone of Northeastern Alaska: Annual report, October 1990–September 1991, 17:30560 (R;US)
Characterization of reservoir rocks and fluids by surface electromagnetic transient methods: Annual report, January 1991–January 1992, 17:30561 (R;US)
Fluid diversion and sweep improvement with chemical gels in oil recovery processes: Final report, 17:30567 (R;US)
Hypothesis on competition of thermal conduction zone and juvenile hydrothermal solution retention zones in the surroundings of magma, 17:30840 (IA;JP;In Japanese)
Multiwell Experiment final report: 4, The fluvial interval of the Mesaverde Formation, 17:30586 (R;US)
VERTPAK1: Code verification analytic solution, 17:32528 (CM;US)
[In-situ permeability determination and fracture characterization using elastic waves]: Progress report, 17:30562 (R;US)

RESIDENCES
See HOUSES
RESIDENTIAL BUILDINGS
See also HOUSES
Analysis of heat accumulation capacities in relation to residential buildings, 17:31106 (R;DK;In Danish)
Analysis of heat accumulation capacities in relation to residential buildings: Literature study (Especially in relation to furnishings etc.), 17:31101 (R;DK;In Danish)
Residential electricity consumption, 17:31118 (R;FI;In Finnish)
RESIDUES (RADIOACTIVE)
See RADIOACTIVE WASTES
RESISTAL
See COPPER BASE ALLOYS
RESISTANCE HEATING
'Soft' electric heating. Control of resistance heating radiators, 17:31108 (R;SE;In Swedish)
RESISTIVITY SURVEYS
Analysis and evaluation of resistivity data.: MT profiling of the southerm Tohoku district, 17:32010 (IA;JP;In Japanese)
RESONANCE CAVITIES
See CAVITY RESONATORS
RESOURCE ASSESSMENT
Study on collection of resource evaluation bases in the northern Tohoku district (Akita-Koma).: Geological survey of Tashirodake and Tara-Komagadake areas, 17:30835 (IA;JP;In Japanese)
RESOURCE DEVELOPMENT
Unconventional gas systems analysis, 17:30590 (R;US)
RESOURCE MANAGEMENT
Statistical process management: An essential element of quality improvement, 17:32501 (R;US)
RESPIRABLE DUSTS
See DUSTS
RESPIRATORY SYSTEM
See also LUNGS
DACRIN: Radiation organ dose from inhalation, 17:32536 (CM;US)
Study of the atmospheric chemistry of radon progeny in laboratory and real indoor atmospheres: Progress report, July 1, 1991–June 30, 1992, 17:31912 (R;US)
RESPONSE FUNCTIONS
Response functions for infinite fermion systems with velocity dependent interactions, 17:32230 (R;FR)
RESTRAINTS
Machining technology for spider of control assembly, 17:30954 (R;CN;In Chinese)
RETORTING
HRS pilot plant and modeling results, 17:30601 (R;US)
REVERSE-FIELD PINCH
Anomalous ion heating and superthermal electrons in the MST reversed-field pinch, 17:32413 (R;US)
Current density fluctuations, nonlinear coupling, and transport in MST, 17:32412 (R;US)
Measurement of current density fluctuations and ambipolar particle flux due to magnetic fluctuations in MST, 17:32411 (R;US)
REVERSED-FIELD MIRRORS
Annual performance report for "A program of FRC theory research", 17:32448 (R;US)
RF SYSTEMS
Analytical formulas for the resonant frequency changes due to opening apertures on cavity walls, 17:31505 (R;FR)
Longitudinal beam dynamics with rf noise, 17:31468 (R;US)
Numerical design of an rf-coupling Iris, 17:31504 (R;FR)
Self-generated stochastic heating in an rf discharge: Annual progress report, May 15, 1991–May 14, 1992, 17:32410 (R;US)
RHO-1500 RESONANCES
See MESONS
RHO-1700 RESONANCES
See MESONS
RIBULOSE DIPHOSPHATE CARBOXYLASE
The potential effects of concurrent increases in temperature, CO_2 and O_3 on net photosynthesis, as mediated by rubisCO, 17:31687 (R;US)
RICE
Study on the early and late mutants of radiation induced rice, 17:31855 (R;CN;In Chinese)
RICHLAND FFTF REACTOR
See FFTF REACTOR
RIEMANN WAVES
See SHOCK WAVES
RINGHALS-2 REACTOR
An assessment of ^{238}Pu and $^{239+240}$Pu in the primary cooling water of a PWR, 17:30898 (R;DK)
RINGS (STORAGE)
See STORAGE RINGS
RISER CRACKING
See COAL LIQUEFACTION
RISK ANALYSIS
See RISK ASSESSMENT
RISK ASSESSMENT
Balancing risk: Ethical issues in risk assessment, 17:31057 (R;US)
Issues in risk assessment and modifications of the NRC health effects models, 17:31998 (R;US)
Risk assessment handbook, 17:30759 (R;US)
Risk assessment technique for evaluating research laboratories, 17:32007 (R;US)
RISOE NATIONAL LABORATORY
Materials Department. Annual report 1991, 17:32498 (R;DK)
Nuclear Safety Research Department. Annual progress report 1991, 17:32500 (R;DK)
Optics and Fluid Dynamics Department. Annual progress report 1 January - 31 December 1991, 17:32499 (R;DK)
Systems Analysis Department. Annual progress report 1991, 17:31050 (R;DK)
ROAD TRANSPORT
Analysis of advantages to be gained by users through utilizing SAFECOM CL computers in lorries, 17:31121 (I;DK;In Danish)
LASTCOMP - electronic data processing for transportation by lorries, 17:31122 (I;DK;In Danish)
LASTCOMP - electronic data processing for transportation by lorries: Final report, 17:31120 (I;DK;In Danish)
Simulation and intelligent vehicle highway systems, 17:31119 (R;US)
ROBOTS
Intelligent perception control based on a blackboard architecture, 17:31347 (R;FR)
Path tracking control of mobile robots with techniques based on the use of curved abscissa, 17:31348 (R;FR;In French)
RATLER: Robotic All-Terrain Lunar Exploration Rover, 17:31365 (R;US)
Sensor-based whole-arm obstacle avoidance for unstructured environments, 17:31354 (R;US)
ROCK SALT
See SALT DEPOSITS
ROCKET ENGINES
A smoke producing rocket motor for atmospheric wind profiling, 17:31627 (R;US)
ROCKETS
Study of wall heat transfer from a high temperature dissociated hydrogen impinging jet, 17:31160 (R;US)
ROCKS
See also METAMORPHIC ROCKS
Hydrology and Radionuclide Migration Program: 1989 progress report, 17:31746 (R;US)
Mechanics of inhomogeneous rock: The two-constituent porous medium paradigm, 17:31281 (R;US)
Numerical calculations on heterogeneity of groundwater flow, 17:31759 (R;SE)
Recent advances in methods for measuring the dynamic response of geological materials to 100 GPa, 17:32016 (R;US)
Redox capacity of crystalline rocks - laboratory studies under 100 bar oxygen gas pressure, 17:30751 (R;FI)
Site characterization and validation - monitoring of head in the Stripa mine during 1991, 17:31737 (R;SE)

ROCKY FLATS PLANT
Development of location criteria for criticality alarm detector placements, 17:31362 (R;US)
RFEDSCHK User's Manual (The RFEDS Lab Data Check routine), Environmental and Scientific Systems Information Resources: Version 1.00, 17:32561 (R;US)
Summary of a graded approach to fire hazard analysis, 17:30762 (R;US)
RODS (CONTROL)
See CONTROL ELEMENTS
RODS (FUEL)
See FUEL RODS
ROOFS
WIPP supplementary roof support system, Room 1, Panel 1: Geotechnical field data analysis bi-annual report, 17:30678 (R;US)
RUBIDIUM
Demonstration of a neon-like rubidium x-ray laser, 17:31424 (R;US)
Experiments on resonantly photo-pumped x-ray lasers, 17:31423 (R;US)
RUMEN
See RUMINANTS
RUMINANTS
See also CATTLE
Animal production and health newsletter. No 16, 17:31865 (I;XA)
RUTHENIUM
Heteropolyanions: Soluble precatalysts for quinoline hydrogenation, 17:30428 (R;US)
Sulfided heterogeneous, bimetallic RuMo catalysts derived from mixtures of $Ru_3(CO)_{12}$ (or $RuCl_3$) and a molybdenum heteropolyanion. The reactions of ethanol with tetrahydroquinoline, 17:30429 (R;US)
RUTHERFORD SCATTERING
Application of the Rutherford backscattering analysis (RBS analysis) for detecting heavy impurity elements in pBN crucible materials. Final report, 17:31298 (I;DE;In German)
RWE-BAYERNWERK REACTOR
Accelerated irradiation test of gundremmingen reactor vessel trepan material, 17:30878 (R;US)

S

S CODES

See ISOCHRONOUS CYCLOTRONS

SECURITY
Safeguards technology and computer security training, 17:30770 (R;US)
The problem with security: Public perception versus reality, 17:32485 (R;US)

SEDIMENTS
Analysis of proposed postclosure alternatives for the Oil Landfarm Waste Management Area at the Oak Ridge Y-12 Plant, Oak Ridge, Tennessee, 17:30746 (R;US)
Evaluation of ^{137}Cs in pond sediment with an underwater HPGe detector, 17:31748 (R;US)
Subsurface Science Program Bibliography, 1985–1992, 17:32008 (R;US)
Use of Lagrangian methods to describe particle distribution and deposition in horizontal turbulent flows, 17:31383 (RA;US)

SEEDS
Postradiation recovery and radioresistance of seeds, 17:31958 (IA;SU;In Russian)
Using tritium oxide to study moisture transfer in drying phase of mixed dry and wet grain, 17:30788 (R;CN)

SEISMIC P WAVES
Active tectonics of the south Caspian basin and surrounding regions, 17:32017 (RA;US)

SEISMIC SOURCES
Marine geophysical studies in the Northern Atlantic with emphasis on sedimentation, crustal structure and subsidence, 17:30565 (I;NO)

SEISMIC SURVEYS
Analysis of three-component seismic data with emphasis on anisotropy, 17:30564 (I;NO)

SELENIUM
Experimental studies of x-ray laser spectral profiles: Observation of gain narrowing and saturation behavior, 17:31426 (R;US)
Selenium speciation in ground water: Quarterly report, 17:31753 (R;US)

SELENIUM 80 TARGET
A pocketful of tin isomers from heavy-ion collisions, 17:32272 (R;US)
SEMICONDUCTOR JUNCTIONS
Research on stable, high-efficiency, amorphous silicon multijunction modules: Annual subcontract report, 1 May 1991–30 April 1992, 17:30821 (R;US)
SEROTONIN
Autoradiographic visualization on the role of central ^{3}H-5-hydroxytryptamine in acupuncture analgesia, 17:31854 (R;CN;In Chinese, English)
SERPUKHOV TEVATRON
Damping of resistive instability in UNK-1 with digital electronics in feedback, 17:31536 (R;SU;In Russian)
SHAFT EXCAVATIONS
The HADES demonstration and pilot project on radioactive waste disposal in a clay formation, 17:30687 (R;FR)
SHALE OIL
Pressurized fluidized-bed hydroretorting of eastern oil shales: Volume 2, Task 3, Testing of process improvement concepts: Final report, September 1987–May 1991, 17:30600 (R;US)
SHEATHS (FUEL)
See FUEL CANS
SHELL MODELS
Perturbative many-body approaches to finite nuclei, 17:32239 (R;NO)
SHELLS (CONTAINMENT)
See CONTAINMENT SHELLS
SHF RADIATION
See RADIOWAVE RADIATION
SHIELDS
Shielding chalculations in x-rays installations for medical diagnosis. description of the method and computational solution, 17:30782 (I;CU;In Spanish)
SHIPMENT
See TRANSPORT
SHOCK WAVES
See also DETONATION WAVES
Diagnostic of shock wave processes, 17:31366 (R;US)
RHALE: A MMALE shock physics code written in C++, 17:32562 (R;US)
SHORT ROTATION CULTIVATION
Biological follow-up in short rotation cultivation on farmland, 17:30799 (R;SE;In Swedish)
Modelling of cadmium fluxes on energy crop land, 17:30812 (R;SE)
SHORT WAVE RADIATION
Nonlinear shaping of a two-dimensional ultrashort ionizing pulse, 17:32409 (R;SE)
Preliminary observations of electromagnetic radiation from plasma in presence of a double layer, 17:32436 (R;SE)
SHOWER COUNTERS
Absolute in situ energy calibration of luminosity calorimeters in the DELPHI experiment at LEP, 17:31598 (R;NO)
Applications of the Los Alamos High Energy Transport code, 17:32348 (R;US)
High resolution crystal calorimetry at LHC, 17:31584 (R;FR)
Investigation of two-track resolution efficiency of the VKD vertex detector using simulation of p-barp interactions at 6 TeV, 17:31573 (R;SU;In Russian)
[Calorimeter based detectors for high energy hadron colliders]: [Progress report], 17:31549 (R;US)
[Effects of ionizing radiation on scintillators and other particle detectors]: Conference summary, 17:31541 (R;US)
[Elementary particle physics research]: Final report, [1 January 1991–31 January 1992], 17:32068 (R;US)
SI SEMICONDUCTOR DETECTORS
Development of high resolution double-sided silicon detectors with projective readout, 17:31548 (R;FR;In French)
SIRI - A proposal for a multi-detector ΔE-E particle telescope, 17:31599 (R;NO)
The Argonne silicon strip-detector array, 17:31540 (R;US)
SIALON
See ALUMINIUM OXIDES
SILICON NITRIDES
SIDERITE
Pressurized fluidized-bed hydroretorting of eastern oil shales: Volume 2, Task 3, Testing of process improvement concepts: Final report, September 1987–May 1991, 17:30600 (R;US)
SIGMA MODEL
Anomaly-free gauges in superstring theory and double supersymmetric sigma-model, 17:32098 (R;SU)
SIGMA-410 RESONANCES
See SIGMA MODEL
SIGNALS
Studies on signal validation and sensor surveillance for in-core signals in NPP: Paper presented at the NEACRP Specialist Meeting on In-core Instrumentation and Reactor Core Assessment, Pittsburg, Pennsylvania, USA, 1-4 October 1991, 17:30961 (R;NL)
SILICA
See SILICON OXIDES
SILICEOUS ROCK
See SANDSTONES
SILICON
Atomistic processes of surface segregation during Si-Ge MBE growth, 17:31268 (R;US)
Irradiation techniques employed at the 10 MW$_{th}$ SAPHIR reactor, 17:30995 (R;CH)
Measurements of crystal growth kinetics at extreme deviations from equilibrium: Technical progress report, 1 September 1990–31 August 1991, 17:31270 (R;US)
Microscopic origins of metastable effects in a-Si:H and deep defect characterization in a-Si,Ge:H alloys: Annual subcontract report, 1 February 1991–31 January 1992, 17:30822 (R;US)
Silicide layer growth rates in Mo/Si multilayers, 17:31244 (R;US)
The technology and application study of NTD CZ silicon for pressure sensing elements, 17:31602 (R;CN;In Chinese)
Uses of Monte Carlo computer simulations in understanding epitaxial growth and ion bombardment of Si(001), 17:31278 (R;US)
SILICON 28 REACTIONS
Baryon and pion distributions from nucleus-nucleus collisions at 15 GeV/nucleon, 17:32287 (IA;DE)
SILICON ALLOYS
Influence of dilute impurities on the evolution of defect cascades in nickel, 17:31201 (R;US)
Recombination and metastability in amorphous silicon and silicon germanium alloys: Annual subcontract report, 1 February 1991–31 January 1992, 17:30823 (R;US)
SILICON NITRIDES
Cost-effective sintered reaction-bonded silicon nitride (SRBSN) for structural ceramics, 17:31254 (R;US)
SILICON OXIDES
Mechanism of surface enrichment and adhesion of coal combustion particulates: Second quarterly report, September 1987, 17:30549 (R;US)
Preparation, optical and laser properties of Nd-doped sol-gel silica, 17:32476 (R;US)
SILICON SEMICONDUCTOR DETECTORS
See SI SEMICONDUCTOR DETECTORS
SIMS
See MASS SPECTROSCOPY
SIMULATORS
An analog macromodel of the SG1525A PWM for use with SPICE2G.6 simulators, 17:31416 (R;US)
SINGLE CRYSTALS
See MONOCRYSTALS
SINGLE PHOTON EMISSION COMPUTED TOMOGRAPHY
SPECT assay of radiolabeled monoclonal antibodies: Comprehensive progress report, September 1989–February 1992, 17:31778 (R;US)
SPECT assay of radiolabeled monoclonal antibodies: Third yearly progress report, September 1991–February 1992, 17:31777 (R;US)
SITE REHABILITATION
See REMEDIAL ACTION

SITE SELECTION
An overview of IPSN research on the evolution of the natural systems in support of the French methodology for the safety evaluation of radwaste disposal in deep geological formations, 17:30658 (R;FR)

SITES (REACTOR)
See REACTOR SITES

SKELETON
^{153}Sm-EDTMP and ^{99m}Tc-EDTMP - The radiopharmacology of two potential bone metastasis radiopharmaceuticals, 17:31914 (RA;US)
A model for electron and beta energy deposition within trabecular bone, 17:31895 (RA;US)
A new approach to radiopharmaceutical dose assessment, 17:31882 (RA;US)
Complexes of technetium-99m with phosphomycine obtained by pH shifting: Biological characteristics, whole-body autoradiography, Γ-camera study, 17:31828 (RA;US)
Evaluation of multiple-dose ^{153}Sm-EDTMP for bone pain palliation in cancer patients, 17:31787 (RA;US)
Radiopharmacology of inhaled Xe-133 in skeletal sites containing deposits of Gaucher cells, 17:31795 (RA;US)

SKIN
See also HAIR
VARSKIN: Dose calculation of contamination of the skin, 17:32543 (CM;US)

SLAGS
The optical properties of high temperature slag, 17:30463 (RA;US)

SLC
See STANFORD LINEAR COLLIDER

SLEEVES
History and current status of Generation 3 thermal sleeves in Westinghouse nuclear power plants, 17:30897 (R;US)

SLUDGES
Developments in geothermal waste treatment biotechnology, 17:30853 (R;US)

SLUGS (FUEL)
See FUEL RODS

SLURRIES
See also FUEL SLURRIES
Dynamical simulations of sedimentation, 17:30533 (RA;US)
Using the refractive index matched technique to study the flow properties of slurries, 17:30521 (RA;US)
Visualization of the wall-slip layer in bounded flows of suspensions, 17:30522 (RA;US)

SLURRIES (FUEL)
See FUEL SLURRIES

SLURRY PIPELINES
Dynamic simulation of pressure driven suspension flow, 17:30532 (RA;US)
Method and apparatus for transporting liquid slurries, 17:30536 (PA;US)

SNAKE RIVER PLAIN
Radionuclides, inorganic constituents, organic compounds, and bacteria in water from selected wells and springs from the southern boundary of the Idaho National Engineering Laboratory to the Hagerman Area, Idaho, 1990, 17:31752 (R;US)

SODIUM 22
^{22}Na and ^{26}Al production in nova outbursts, 17:32060 (R;US)
Radioactivities induced in some LDEF samples (Long Duration Exposure Facility (LDEF)), 17:32251 (R;US)

SODIUM 24
Determination of neutron dose from criticality accidents with bioassays for Na-24 and P-32, 17:31993 (RA;US)
Investigation of β-ν angular correlation in decay of ^{24}Na nuclei, 17:32249 (R;SU)

SODIUM CHLORIDES
Jain-Lidiard model calculations of radiation damage in sodium chloride: Presented at the Conference REI'6 (Radiation Effects in Insulators-6), June 24-28, 1991, Weimar, Germany, 17:31271 (R;NL)

SODIUM MINERALS
See MINERALS

SOFC
See SOLID ELECTROLYTE FUEL CELLS

SOFT SOLDERING
See SOLDERING

SOFT X RADIATION
The ALEXIS experiment: Current status and performance, 17:32054 (R;US)

SOILS
Analysis of proposed postclosure alternatives for the Oil Landfarm Waste Management Area at the Oak Ridge Y-12 Plant, Oak Ridge, Tennessee, 17:30746 (R;US)
Comparison of acid leachate and fusion methods to determine plutonium and americium in environmental samples, 17:31287 (R;US)
Corrective Action Plan for underground storage tanks 0439-U, 0440-U, 2073-U, 2074-U, and 2075-U at the East End Fuel Station, Buildings 9754 and 9754-2, Oak Ridge Y-12 Plant, Oak Ridge, Tennessee, Facility ID No. 0-010117, 17:30753 (R;US)
Effects of lag and maximum growth in contaminant transport and biodegradation modeling, 17:31727 (R;US)
Soil acidification and element fluxes as related to tree species in deciduous forests of south Sweden, 17:31725 (R;SE)
Subsurface Science Program Bibliography, 1985–1992, 17:32008 (R;US)
Three-dimensional bioremediation modeling in heterogeneous porous media, 17:31728 (R;US)

SOLAR ARCHITECTURE
Solar building study. Final report: Spinney Gardens [Crystal Palace, London], 17:30826 (R;GB)

SOLAR CELLS
Microscopic origins of metastable effects in a-Si:H and deep defect characterization in a-Si,Ge:H alloys: Annual subcontract report, 1 February 1991–31 January 1992, 17:30822 (R;US)
Recombination and metastability in amorphous silicon and silicon germanium alloys: Annual subcontract report, 1 February 1991–31 January 1992, 17:30823 (R;US)
Research on stable, high-efficiency, amorphous silicon multijunction modules: Annual subcontract report, 1 May 1991–30 April 1992, 17:30821 (R;US)

SOLAR CONCENTRATORS
Mirror alignment techniques for point-focus solar concentrators, 17:30830 (R;US)

SOLAR DISTRICT HEATING
Seasonal storage of solar heating at Nynaeshamn, 17:30831 (R;SE;In Swedish)

SOLAR ENERGY
Life cycle cost analysis of solar heating and DHW systems in residential buildings, 17:30820 (R;FR)

SOLAR HEATING SYSTEMS
Solar heating system for the combined space heating of and domestic hot water: Development of a competitive system. Calculations and measurements in relation to the test plant, 17:30825 (R;DK;In Danish)

SOLAR-ASSISTED POWER SYSTEMS
Optimizing of a photovoltaic system for supplying a residential with electricity, 17:30824 (R;SE)

SOLDERING
Radar operations process waste assessment: Solder pot tinning, 17:31132 (R;US)

SOLID ELECTROLYTE FUEL CELLS
Alternative materials for solid oxide fuel cells: Factors affecting air-sintering of chromite interconnections, 17:31088 (R;US)
Jet vapor deposition of thin films for solid oxide and other fuel cell applications, 17:31081 (R;US)
Perovskite solid electrolytes for SOFC, 17:31080 (R;US)
Solid oxide fuel cell processing using plasma arc spray deposition techniques: Final report, 17:31083 (R;US)

SOLID SCINTILLATION DETECTORS
See also PLASTIC SCINTILLATION DETECTORS
Radiation damage in cesium iodide and other scintillating crystals, 17:31542 (R;US)

SOLID WASTES
See also WOOD WASTES

Analysis of proposed postclosure alternatives for the Oil Landfarm Waste Management Area at the Oak Ridge Y-12 Plant, Oak Ridge, Tennessee, 17:30746 (R;US)
Preliminary assessment of RTR and visual characterization for selected waste categories, 17:30716 (R;US)
Survey of EEC solid waste arisings and performance of nondestructive assay systems, 17:30695 (R;FR)

SOLIDS
Conceptual design for the Waste Receiving and Processing facility Module 2A: Conceptual Design Report: Volume 1, 17:30675 (R;US)
Conceptual design for the Waste Receiving and Processing facility Module 2A: Outline specifications: Volume 3, 17:30676 (R;US)
Conceptual design for the Waste Receiving and Processing facility Module 2A: System descriptions: Volume 5, 17:30677 (R;US)
Studies of granular flow down an inclined chute: Quarterly technical progress report, March 13, 1992–June 12, 1992, 17:30535 (R;US)

SOLUBILITY
The influence of organic complexing agents upon the mobilization and migration of radionuclides from ILW contained in cement and bitumen under nearfield conditions for a repository in a salt dome, 17:30694 (R;FR)

SOLUTES
VERTPAK1: Code verification analytic solution, 17:32528 (CM;US)

SOLUTIONS
See also AQUEOUS SOLUTIONS
LEACHATES
PROCESS SOLUTIONS
Chemical potentials in dilute, multicomponent solutions, 17:31311 (R;US)

SOLVENTS
Chemical potentials in dilute, multicomponent solutions, 17:31311 (R;US)

SOMATOSTATIN
Technetium labelled somatostatin a potential agent for in vivo tumor localization, 17:31791 (RA;US)

SOMATOTROPIN RELEASE INHIBITING FACTOR
See SOMATOSTATIN

SOOT
Soot and fuel distribution imaging in a diesel engine, 17:31157 (R;US)

SORBENT INJECTION PROCESSES
Selected characteristics of twelve clean coal technologies, 17:31070 (RA;US)
Technology descriptions and demonstrations, 17:30419 (RA;US)

SOUTH KOREA

STORAGE FACILITIES
Ross Hazardous and Toxic Materials Handling Facility: Environmental assessment, 17:31694 (R;US)
STORAGE RINGS
See also BROOKHAVEN RHIC
LEP STORAGE RINGS
PEP STORAGE RINGS
SERPUKHOV TEVATRON
SUPERCONDUCTING SUPER COLLIDER
TRISTAN STORAGE RINGS
Beam diagnostic instruments of TARN II, 17:31537 (RA;JP)
Dissipative particle dynamics in ee-bar storage rings in the presence of linear synchro-betatron coupling, 17:31534 (R;SU)
JINR Tau-charm factory design considerations, 17:31533 (R;SU)
STRAND BREAKS
Microdosimetrical calculations of the rate of repairable DNA - double strand breaks based on a model for the interpretation of experiments with different doses and radiation qualities, 17:31967 (RA;SU)
STRANGE BARYONS
See HYPERONS
STRANGE MESONS
See also KAONS
$\eta, K_L \rightarrow \pi^+\pi^-\gamma$ as tests of chiral models, 17:32177 (R;FR)
STRANGENESS
Strangeness production in the $pp \rightarrow pK^+Y$ and $pA \rightarrow pK^+X$ reactions at Saturne, 17:32153 (R;FR)
STRATEGIC PETROLEUM RESERVE
Procurement activities at the Strategic Petroleum Reserve, 17:30584 (R;US)
US Department of Energy Naval Petroleum Reserves combined financial statement, 17:30583 (R;US)
STRENGTH (FRACTURE)
See FRACTURE PROPERTIES
STRENGTH FUNCTIONS
From experimental monopole cross-sections to nuclear incompressibilities, 17:32219 (R;FR)
STRING MODELS
See also SUPERSTRING MODELS
A new exact solution to the classical equations of motion of the relativistic string with massive ends, 17:32104 (R;SU)
Anomaly-free gauges in superstring theory and double supersymmetric sigma-model, 17:32098 (R;SU)
Remarks on the additional symmetries and W-constraints in the generalized KdV hierarchy, 17:32089 (R;XA)
Twisted WZW superstring solutions, 17:32071 (R;FR)
STRIPPER FOILS
See BEAM STRIPPERS
STRIPPERS
See BEAM STRIPPERS
STRONTIUM
Modeling strontium-cesium-calcium-magnesium-sodium ion exchange equilibria on chabazite with the Wilson equation, 17:30659 (R;US)
Selective decontamination for cesium and strontium in evaporation concentrates from reprocessing plants with crown ethers by transport through supported liquid membranes, 17:30699 (R;FR;In French)
STRONTIUM 90
A study on ^{90}Sr adsorption by the soils around Qinshan and Daya Bay nuclear power plants, 17:31690 (R;CN;In Chinese)
Environmental radioactivity in the North Atlantic region including the Faroe Islands and Greenland: 1988 and 1989, 17:31730 (R;DK)
Study on the ^{90}Sr absorption by agricultural plants grown in soil from Daya Bay and Qinshan area, 17:31875 (R;CN;In Chinese)
STRONTIUM ISOTOPES
See also STRONTIUM 90
The isotopic composition of strontium in Israeli rains, 17:31705 (IA;IL)

STRONTIUM OXIDES
Activation energy and critical current density in Bi-Sr-Ca-Cu-O, 17:31247 (R;US)
Magnetic behavior of a $Bi_2Sr_2Ca_1Cu_2O_x$ single crystal by direct magneto-optical observations, 17:31259 (R;US)
Transport and magnetization currents in BSCCO/Ag tapes, 17:32391 (R;US)
STRUCTURAL BUCKLING
See DEFORMATION
STRUCTURAL MATERIALS
See BUILDING MATERIALS
STRUCTURE (CRYSTAL)
See CRYSTAL STRUCTURE
STRUCTURES (BUILDINGS)
See BUILDINGS
STURM-LIOUVILLE EQUATION
Algorithm and program for solution of the Sturm-Liouville problem using the high order accuracy spline scheme, 17:32553 (R;SU;In Russian)
SU-2 GROUPS
On quantum groups and their potential use in mathematical chemistry, 17:32043 (R;FR)
SUBBITUMINOUS COAL
Formation and retention of methane in coal: Final report, 17:30470 (R;US)
Temperature-programmed catalytic liquefaction of low rank coal using dispersed Mo catalyst, 17:30430 (R;US)
SUBCONTRACTORS
See CONTRACTORS
SUBCOOLED BOILING
An experimental study of bubble detachment point in subcooled boiling at low pressure and velocity, 17:31381 (R;CN;In Chinese)
SUBURBS
See URBAN AREAS
SUGAWARA THEORY
General construction of the Virasoro algebra from superalgebras, 17:32116 (R;FR)
SULFATE-REDUCING BACTERIA
Biological conversion of synthesis gas: Project status report, January 1, 1992–March 31, 1992, 17:30436 (R;US)
The roles of the micro-organisms and chromium content in the corrosion of iron-chromium steels in the presence of sulfate-reducing bacteria, 17:31210 (R;FR;In French)
SULFITE WASTE LIQUOR
See SPENT LIQUORS
SULFUR 32 REACTIONS
Fluctuations of multiplicities in rapidity windows in sulphur-sulphur collisions at 200 AGeV, 17:32293 (IA;DE)
SULFUR DIOXIDE
Molten iron oxysulfide as a superior sulfur sorbent: Technical progress report, December 1, 1990–February 28, 1991, 17:30477 (R;US)
Molten iron oxysulfide as a superior sulfur sorbent: Technical progress report, March 1, 1991–May 30, 1991, 17:30478 (R;US)
Molten iron oxysulfide as a superior sulfur sorbent: Technical progress report, June 1, 1991–August 31, 1991, 17:30479 (R;US)
Molten iron oxysulfide as a superior sulfur sorbent: Technical progress report, September 1, 1991–November 30, 1991, 17:30480 (R;US)
Molten iron oxysulfide as a superior sulfur sorbent: Technical progress report, September 1, 1989–March 1, 1990, 17:30481 (R;US)
Molten iron oxysulfide as a superior sulfur sorbent: Third quarter technical progress report, June 1–August 31, 1990, 17:30476 (R;US)
Molten iron oxysulfide as a superior sulfur sorbent: Third quarter technical progress report, March 1, 1990–June 1, 1990, 17:30482 (R;US)
The role of human activity and land use change in atmospheric chemistry and air quality: Revision 1, 17:30486 (R;US)
SULFUR HYDRIDES
See HYDROGEN SULFIDES
SULFUR OXIDES
See also SULFUR DIOXIDE
Low NO_x/SO_x Burner retrofit for utility cyclone boilers: Public design report, 17:30545 (R;US)
SUM RULES
Measuring the Drell-Hearn-Gerasimov sum-rule, 17:32267 (RA;FR)
SUPER HIGH FREQUENCY RADIATION
See RADIOWAVE RADIATION
SUPERALLOYS
See HEAT RESISTING ALLOYS
SUPERCOMPUTERS
Distributed make (and more), 17:32566 (R;US)
SUPERCONDUCTING FILMS
Transport and magnetization currents in BSCCO/Ag tapes, 17:32391 (R;US)
YBCO based multilayers for optoelectronic devices, 17:31251 (R;FR)
SUPERCONDUCTING MAGNETS
Magnetic field perturbation caused by bending vibrations of a quadrupole, 17:31469 (R;US)
R and D needs and opportunities for application of space vehicle cryogenic technology to Maglev systems (Magnetic levitation), 17:31174 (RA;US)
Spectrum analysis of the power line flicker induced by the electrical test of the prototype Booster dipole, 17:31480 (R;US)
SUPERCONDUCTING MOTORS
Steady-state cooling of a high-temperature superconducting motor, 17:32392 (R;US)
SUPERCONDUCTING SUPER COLLIDER
Fully pipelined and programmable Level 1 trigger, 17:31527 (R;US)
Longitudinal beam dynamics with rf noise, 17:31468 (R;US)
Modification to footprint to accommodate an external fixed-target hall, 17:31443 (R;US)
Proceedings of the 1991 Symposium on the Superconducting Super Collider: "The Project, The Progress, The Physics", 17:31444 (R;US)
SUPERCONDUCTING WIRES
Electrical and microstructural characterization of silver sheathed high T_c superconductors wires and ribbons, 17:31249 (R;FR)
SUPERCONDUCTIVITY
Method of characterization of high temperature superconductor ceramics, 17:31252 (I;CU;In Spanish)
SUPERCONDUCTORS
See also HIGH-TC SUPERCONDUCTORS
TYPE-II SUPERCONDUCTORS
Ac losses test on Nb_3Sn strands, 17:32388 (R;NL)
Characteristic of the flux pinning at intergrain boundaries in bulk Bi-Pb-Sr-Ca-Cu-O superconductors, 17:32385 (R;CN)
Development for specific heat measuring apparatus of high T_c superconductor in 80 $\approx$ 200 K temperature range, 17:32383 (R;CN;In Chinese)
Flux creep in fluorine-doping Bi-Pb-Sr-Ca-Cu-O bulk superconductor, 17:32384 (R;CN;In Chinese)
Preparation of Y-Ba-Cu-O superconducting film above liquid nitrogen temperature, 17:32386 (R;CN;In Chinese)
SUPERCRITICAL FLOW
See TURBULENT FLOW
SUPERGRAVITY
Compensating fields and anomalies in supergravity, 17:32080 (R;XA)
SUPERHEAVY ELEMENTS
See TRANS 104 ELEMENTS
SUPERMULTIPLETS
Linear supermultiplets and non-holomorphic gauge coupling functions, 17:32119 (R;FR)
SUPERSTRING MODELS
Superstring derived standard-like models and the top quark mass hierarchy, 17:32128 (R;US)
SUPERSYMMETRIC PARTICLES
See SPARTICLES

SUPERSYMMETRY
Prospects for supersymmetry discoveries at a 500 GeV e^+e^- collider, 17:32172 (R;FR)
Search for new particles in the SUSY framework, 17:32169 (R;FR)
SUPPORTS
WIPP supplementary roof support system, Room 1, Panel 1: Geotechnical field data analysis bi-annual report, 17:30678 (R;US)
SURFACE BOILING
See SUBCOOLED BOILING
SURFACE FINISHING
Interfacial microchemical characterization needs in surface processing, 17:31143 (R;US)
Standards for burrs?, 17:31233 (R;US)
SURFACE MINING
Evaluation of radiological hazards associated with mineral sand-mining, 17:31955 (IA;CA)
Radiation safety aspects of occupational areas at a Brazilian open-pit mine, 17:30610 (IA;CA)
SURFACE WATERS

FEEDWATER
GROUND WATER
HEAVY WATER
RAIN WATER
WASTE WATER
A new model of coal-water interaction and relevance for dewatering: Quarterly technical progress report, December 1, 1991–February 28, 1992, 17:30425 (R;US)
Boiling crisis in water forced flow in tubes, 17:31391 (R;SU;In Russian)
Boundary void fraction in water flow in tubes, 17:31393 (R;SU;In Russian)

Determination of plutonium in environmental water, 17:31292 (R;CN;In Chinese)
Measure of water transfers by diffusion and permeation through materials, 17:30656 (R;FR)
Modelling of freon heat transfer in water under supercritical pressure, 17:31392 (R;SU;In Russian)
Oxidation-sulfidation behavior of iron alloys containing 16 to 40 atomic percent aluminum, 17:31216 (R;US)
Swelling pressure, water uptake, and permeability of 70/30 crushed salt/bentonite, 17:30721 (R;US)
The mass transfers of water by diffusion and permeation through a covering of wastes disposal, 17:30655 (R;FR)

WATER COOLANT
See WATER

WATER COOLED REACTORS
See also ACPR REACTOR
BWR TYPE REACTORS
HFETR REACTOR
HFR REACTOR
IOWA UTR-10 REACTOR
NSRR REACTOR
PWR TYPE REACTORS
POOL TYPE REACTORS
Characteristics of potential repository wastes: Volume 1, 17:30869 (R;US)
Characterization of jet breakup mechanisms observed from simulant experiments of molten fuel penetrating coolant: Technical progress report, FY 1992, 17:31005 (R;US)
Iodine chemical form in LWR reactor accidents: Regulatory perspectives in the United States, 17:30919 (RA;JP)

WATER HEATERS
Efficient domestic hot water heating, 17:31105 (R;DK;In Danish)

WATER MODERATOR
See WATER

WATER POLLUTION
Measurements, classification and valorization of environmental problems: Case rural area of Oulu, 17:31667 (R;FI;In Finnish)

WATER PUMPS
Asymmetric flow events in a VEER 1000, 17:30998 (R;US)

WATER QUALITY
Technical summary of groundwater quality protection program at the Savannah River Site (1952–1986): Volume 2, Groundwater monitoring results, 17:31696 (R;US)

WATER SOLUTIONS
See AQUEOUS SOLUTIONS

WATER TREATMENT PLANTS
An evaluation of Hanford water treatment practices addendum, 17:30969 (R;US)
Energy problems in the opration of water treatment plants in cold periods: Phase 1 (1988-1990), 17:31149 (R;DK;In Danish)

WATER WAVES
The interaction between water waves and marine structures, 17:31409 (I;NO)

WATERBORNE PARTICLES
See PARTICULATES

WATERSHEDS
See also PICEANCE CREEK BASIN
Ecological effects of contaminants and remedial actions in Bear Creek, 17:31726 (R;US)

WAVE PROPAGATION
Propagation of relativistic high current electron beams across the geomagnetic field, 17:31463 (R;US)

WAVES (SHOCK)
See SHOCK WAVES

WAZ 16
See NICKEL BASE ALLOYS

WECS
See WIND TURBINES

WEINBERG ANGLE
Exotic fermion mixing revisited, 17:32149 (R;FR)

WEINBERG LEPTON MODEL
Spontaneous decoupling of extended Gauge models, 17:32148 (R;FR)

WEINBERG MODEL
See WEINBERG LEPTON MODEL

WELDED JOINTS
Characterizing laser fusion welded aluminum using synchrotron x-ray microtomography, 17:31406 (R;US)
Improving the properties of stainless steel electron-beam welds by laser treatment, 17:31213 (R;CN;In Chinese)
Thermal stress and strain analysis in traveling autogenous welds, 17:31363 (R;US)

WELDING
See also ARC WELDING
LASER WELDING
SOLDERING
Comparison of European codes and standards on the welding of LMFBR components and proposals for their harmonization, 17:30913 (R;FR)
Thermal stress and strain analysis in traveling autogenous welds, 17:31363 (R;US)

WELDS
See WELDED JOINTS

WEST GERMANY
See FEDERAL REPUBLIC OF GERMANY

WEST VIRGINIA
Multi-strata exploration and production study, October 1,1989–September 24, 1992, 17:30588 (R;US)

WESTERN AREA POWER ADMINISTRATION
Western Area Power Administration: Combined power system financial statements and supplemental schedules (Combined Power System Financial Statements and Supplemental Schedules. September 30, 1991. (With Independent Auditor's Report Thereon)), 17:31047 (R;US)

WETLANDS
Effect of season, substrate composition, and plant growth on landfill leachate treatment in a constructed wetland, 17:31691 (R;US)

WEYL FIELD
See WEYL UNIFIED THEORY

WEYL UNIFIED THEORY
From the Weyl theory to a theory of locally anisotropic spacetime, 17:32099 (R;SU)

WILLOWS
Salix plantation: Machinery, methods and economy, 17:30798 (R;SE;In Swedish)

WIND
A smoke producing rocket motor for atmospheric wind profiling, 17:31627 (R;US)
Wind energy calculations for Swedish coastal water conditions. Report nr 3, 17:30855 (R;SE;In Swedish)

WIND ENERGY CONVERSION SYSTEMS
See WIND TURBINES

WIND GENERATORS
See WIND TURBINES

WIND POWER
IEA wind energy.: Annual report 1991, 17:30854 (R;SE)

WIND TURBINES
See also HORIZONTAL AXIS TURBINES
VERTICAL AXIS TURBINES
Linear quadratic control of variable speed wind turbines below rated power, 17:30859 (R;SE)
Matching asynchronous generators to small windmills, 17:30857 (I;DK)
Slow-running permanent magnetic generators for wind power etc. 1.5-100 kW: Calculations and draft, 17:30858 (I;DK;In Danish)

WINDOWS
Cesium iodide alloys, 17:31613 (PA;US)
Optimal design of windows: An investigation of heat technology, 17:31102 (R;DK;In Danish, English)

WIPP
WIPP supplementary roof support system, Room 1, Panel 1: Geotechnical field data analysis bi-annual report, 17:30678 (R;US)
Waste crate counter design, 17:30708 (R;US)

WOOD
Fatigue tests on glued laminated wood beams: Partial report 4: Testing of series C, 17:30856 (R;DK;In Danish)

WOOD ALCOHOL
See METHANOL

WOOD FUELS
System study, wood powder heat 30 kW - 3 MW, 17:30810 (R;SE;In Swedish)

WOOD WASTES
Part 1: Logging residues in piles - Needle loss and fuel quality. Part 2: Nitrogen leaching under piles of logging residues, 17:30806 (R;SE;In Swedish)
Techniques for separation of green parts, and nutrient content in green parts, 17:30814 (R;SE;In Swedish)

WORKERS
See PERSONNEL

WWER TYPE REACTORS
See also WWER-3 REACTOR
Asymmetric flow events in a VEER 1000, 17:30998 (R;US)

WWER-3 REACTOR
Reactor pressure vessel embrittlement: Report of the IAEA extrabudgetary programme on the safety of WWER-440 model 230 nuclear power plants, 17:30891 (R;XA)

WWER-440 REACTOR
See WWER-3 REACTOR

WYOMING
Unconventional gas systems analysis, 17:30590 (R;US)

X

X RADIATION
See also HARD X RADIATION
SOFT X RADIATION
Accidental exposure with X-ray diffraction equipment, 17:31992 (RA;US)

X-2830 RESONANCES
See MESONS

X-RASERS
See X-RAY LASERS

X-RAY DIFFRACTION
12th general conference of the condensed matter division of the E.P.S. V.16A., 17:32372 (I;CS)

X-RAY DIFFRACTOMETERS
Sample holder for x-ray diffractometry, 17:31600 (PA;US)

X-RAY FLUORESCENCE ANALYSIS
Application of the multi-element analysis by X-fluorescence and neutron activation to the characterization of an archaeological site, 17:31294 (R;FR;In French)

X-RAY LASERS
Demonstration of a neon-like rubidium x-ray laser, 17:31424 (R;US)
Experimental studies of x-ray laser spectral profiles: Observation of gain narrowing and saturation behavior, 17:31426 (R;US)
Experiments on resonantly photo-pumped x-ray lasers, 17:31423 (R;US)
Self-consistent one-dimensional modelling of x-ray laser plasmas, 17:31422 (R;US)
Table-top x-ray lasing based on optical-field-induced ionization, 17:31425 (R;US)

X-RAY SPECTRA
Calculations of LINAC spectrum characteristics using EGS4, 17:31503 (RA;JP;In Japanese)
Calculations of bremsstrahlung photon spectrum from β-ray radioisotopes, 17:31580 (RA;JP;In Japanese)

X-RAY SPECTROSCOPY
Theoretical standards in x-ray spectroscopies: Annual progress report, 1991–1992, 17:32355 (R;US)

XENON 118
Lifetime measurements in ^{118,120}Xe, 17:32245 (R;US)

XENON 120
Lifetime measurements in ^{118,120}Xe, 17:32245 (R;US)

XUV
See EXTREME ULTRAVIOLET RADIATION

Y

Y*RESONANCES
See BARYONS

Y-12 PLANT
Analysis of proposed postclosure alternatives for the Oil Landfarm Waste Management Area at the Oak Ridge Y-12 Plant, Oak Ridge, Tennessee, 17:30746 (R;US)
Program overview of the hollow clay tile wall program, 17:31368 (R;US)
Structural testing of clay tile walls testing and evaluation program, 17:31284 (R;US)

YANG-MILLS THEORY
Linear supermultiplets and non-holomorphic gauge coupling functions, 17:32119 (R;FR)

YIELD (FISSION)
See FISSION YIELD

YOSHIDA SARCOMA
See EXPERIMENTAL NEOPLASMS

YTTERBIUM COMPLEXES
Synthesis, characterization and reactivity of some lanthanide organometallics, 17:31316 (R;FR;In French)

YTTRIUM
Optical properties of Er^{3+} and Tm^{3+} doped Y_2SiO_5, 17:31250 (R;FR)

YTTRIUM ALLOYS
Summary of the 12th study meeting of hydrogen energy system, 17:30794 (I;JP;In Japanese)

YTTRIUM ALUMINIUM GARNETS
See ALUMINIUM OXIDES

YTTRIUM OXIDES
Flux pinning in oxygen-depleted $YBa_2Cu_3O_{7-y}$ single crystals, 17:31264 (R;US)
High-temperature deformation and diffusion in oxides, 17:31245 (R;US)

YUCCA MOUNTAIN
Earthquake-induced water-level fluctuations at Yucca Mountain, Nevada, April 1992, 17:31747 (R;US)
Technical data base quarterly report, April–June 1992: Yucca Mountain Site Characterization Project, 17:30669 (R;US)
Yucca Mountain Site Characterization Project Technical Data Catalog: Yucca Mountain Site Characterization Project, 17:30668 (R;US)

Z

Z NEUTRAL BOSONS
Heavy flavour physics at LEP, 17:32170 (R;FR)
Phenomenology of one extra neutral Z, 17:32198 (R;FR)

ZEOLITES
Modeling strontium-cesium-calcium-magnesium-sodium ion exchange equilibria on chabazite with the Wilson equation, 17:30659 (R;US)
Structure sensitive reactions over Co, Fe and mixed metal clusters in zeolites: Annual technical progress report, 17:31314 (R;US)

ZINC COMPOUNDS
See also ZINC OXIDES
ZINC SELENIDES
ZINC SULFIDES
ZINC TELLURIDES
Desulfurization of hot fuel gas produced from high-chlorine Illinois coals: Technical report, December 1, 1991–February 29, 1992, 17:30459 (R;US)

ZINC OXIDES
Research on stable, high-efficiency, amorphous silicon multijunction modules: Annual subcontract report, 1 May 1991–30 April 1992, 17:30821 (R;US)

ZINC SELENIDES
Annihilation characteristics in as-grown and electron irradiated Zn II-VI semiconductors, 17:32368 (R;FR)

ZINC SULFIDES
Annihilation characteristics in as-grown and electron irradiated Zn II-VI semiconductors, 17:32368 (R;FR)
ZINC TELLURIDES
Annihilation characteristics in as-grown and electron irradiated Zn II-VI semiconductors, 17:32368 (R;FR)
ZION STATION UNIT-1
See ZION-1 REACTOR
ZION STATION UNIT-2
See ZION-2 REACTOR
ZION-1 REACTOR
Experiments to investigate the effects of 1:10 scale Zion structures on direct containment heating (DCH) in the Surtsey Test Facility: The IET-1 and IET-1R tests, 17:30899 (R;US)
ZION-2 REACTOR
Experiments to investigate the effects of 1:10 scale Zion structures on direct containment heating (DCH) in the Surtsey Test Facility: The IET-1 and IET-1R tests, 17:30899 (R;US)
ZIRCALOY
See also ALLOY-ZR98SN-4
Materials compatibility and corrosion issues for accelerator transmutation of waste, 17:30704 (R;US)
ZIRCON
Applied and theoretical study of textural and structural evolution of pure and doped zircon powders, 17:31257 (R;FR;In French)
ZIRCONATES
Fabrication, properties and tritium release rates of lithium zirconates: Paper presented at the 'Third International Symposium on the Fabrication and Properties of Lithium Ceramics' during the '93rd Annual Meeting of the American Ceramic Society', Cincinnati, Ohio, April 28-May 2, 1991, 17:32452 (R;NL)
ZIRCONIUM
Study of zirconium/stainless steel interface in tubular junctions made by eutectic diffusion, 17:31205 (R;FR)
ZIRCONIUM ALLOYS
Thermodynamic analysis of phase equilibria in the iron-zirconium system, 17:31204 (R;US)
ZIRCONIUM BORIDES
Alternate electrode materials for the SP100 reactor: Final report, 17:31263 (R;US)
ZIRCONIUM HYDROXIDES
Applied and theoretical study of textural and structural evolution of pure and doped zircon powders, 17:31257 (R;FR;In French)
Growth kinetics for the precipitation of zirconium hydroxide from aqueous zirconium and tin bearing solutions by the addition of ammonium hydroxide, 17:30741 (R;US)
ZIRCONIUM OXIDES
Model for impedance of an ionic conductor sandwiched between blocking electrodes, 17:31321 (R;US)
ZIRFLEX PROCESS
Growth kinetics for the precipitation of zirconium hydroxide from aqueous zirconium and tin bearing solutions by the addition of ammonium hydroxide, 17:30741 (R;US)

Contract Number Index

Numbers assigned to DOE contracts announced in documents in this publication are listed. Contract numbers are sorted alphanumerically and list the primary corporate author of the document cited, the citation number, and the report number or other document identification.

Report Number Index

The report number index consists of the alphanumeric identifiers assigned to report literature as well as patent and conference literature cited in this publication. Entries provide the abstract number; the source(s) of availability of the document; the GPO file prefix for GPO depository library documents; the order number for OSTI and NTIS report ordering purposes; and, if the document was distributed under the DOE distribution program, the category number is shown for paper copy (PC), microfiche (MF), or no distribution (ND). These categories are included to assist DOE librarians in responding to requests for reports in their collections. The index also lists secondary numbers, with the corresponding abstract numbers and cross-references to other identifying numbers.

Codes Used on Index Lines

Following the citation numbers in the Corporate Author, Personal Author, and Subject Indexes, codes are used to designate the type of document, country of publication, and language of the document, e.g., (R;SU;In Russian). The language designator does not appear if the document is published in English.

ORDER FORM

DOE and DOE Contractors: Fill in Parts I, II, and IV. **Others:** Fill in Parts I, III, and IV. Mark appropriate blanks in Part IV to indicate quantity and form (microfiche or paper copy).

I. SHIPPING AND PAYMENT INFORMATION

Ordering Address

Name Telephone

Address

City State Zip

Shipping Address (if different from above)

Name

Address

City State Zip

SIGNATURE (Required to validate ALL orders)

II. OSTI ORDERS (DOE and DOE contractors can order from OSTI.)

☐ Charge OSTI deposit account no.

Mail orders to: U.S. Department of Energy
Office of Scientific and Technical Information
P.O. Box 62
Oak Ridge, TN 37831

III. NTIS ORDERS

☐ Charge NTIS deposit account no.

☐ Check/Money Order enclosed for $

☐ Charge to my ☐ American Express ☐ VISA ☐ Mastercard

Account Number **Card expiration date**

☐ Ship and Bill (see below for restrictions)

Employer identification number (9 digits) _ _–_ _ _ _ _ _ _

Purchase Order number

Phone number of billing office

(Required for Ship & Bill orders)

Ship & Bill service is restricted to North American business locations for an extra $7.50 per order (or per Custom Search). The business' employer identification number plus the phone number of the office paying the bill are required to process these requests. A late payment charge will be applied to billings more than 30 days overdue. Prepaying, using an NTIS Deposit Account or a charge account, speeds order processing. Be sure payment and order are sent together. Checks, payable to NTIS, must be in U.S. dollars.

Mail orders to: U.S. Department of Commerce
National Technical Information Service
5285 Port Royal Road
Springfield, VA 22161

IF NO METHOD OF PAYMENT IS INDICATED, YOUR ORDER WILL BE RETURNED TO YOU AS A PRICE QUOTE UNPROCESSED.

Federal Depository Library Program

As a result of an agreement between the U.S. Government Printing Office (GPO) and the Department of Energy, beginning in 1984 DOE reports with unlimited distribution are now included in the Federal Depository Library Program. The Regional Depository Libraries listed below receive and retain at least one copy of nearly every Federal Government publication, either in printed or microfilm form, for use by the general public. These libraries provide reference services and interlibrary loans; however, they are not sales outlets. You may wish to ask your local library to contact a Regional Depository to help you locate specific publications, or you may contact the Regional Depository yourself. Do not send checks or orders to these libraries.
